Subject: Giant Ciniza

Dear Team:

Dorinda Mancini, Giant's environmental representative, has requested OCD review the follow issue.

The issue of Pilot's truck stop (the old Giant truck stop) disposing of untreated commercial and sewage waste into the ponds of the refinery. This untreated waste goes into the refinery aeration lagoons where it goes through the same type of treatment for refinery wastewater. This type of treatment is primarily designed to remove or reduce benzene to non-hazardous levels. As pointed out by Giant, it does not do a very good job on certain types of bacteria. Also, in the past on occasions, if the truck stop had sewer problems, they would open a by-pass valve and this material would by-pass the refinery treatment system and go directly into the evaporation ponds.

Additional information has come to light regarding this matter. It has been discovered that there is a wide variety of possible dangerous substances coming from the Pilot convenience center. Dorinda, has told me that she has discovered hypodermic needles, raw sewage waste, ie floaters, paper, etc. All of the Giant employees have been forced to take hepatitis shots because of this situation. This is the same water that is currently being sold by Giant for "beneficial" use, such as road construction, and dust control. This water has been shown to contain e-coli and fecal coliform bacteria. According to Giant, they need to sell this water in order to keep the ponds at safe levels or reduce refinery capacity.

Dorinda and the rest of the Giant employees, including those at the corporate level, are adamantly opposed to the continuance of this practice, since they can't really control Pilot's operations anymore. While this practice has been permitted in the past, Giant would like to take this opportunity (renewal of the discharge permit) to change this. They would like to be able to rely on us (OCD) to allow them to discontinue acceptance of this waste or require Pilot to install a water treatment system.

I see the following issues:

1. OCD does not have regulatory authority over Pilot.
2. The water being placed in the ponds or sold for beneficial use *may* be a health hazard to the public or wildlife.
3. Giant indicates they cannot afford to treat the water and needs to continue the sale of the water.
4. The sale of the truck stop was contingent upon Giant continuing taking the water.
5. OCD has allowed this in the past when Giant owned the truck stop.

I need your help on this complex issue. Please let me know when we can meet about this, OCD approval of the discharge permit is pending this discussion.

Thank you.

Subject: RE: cinizaboundrywells

Dear Dorinda:

I have reviewed the attached Well Placement Plans and have the following questions:

1. If groundwater is encountered and monitor wells are completed, will any of the screen be above the water level?

2. If a sand zone (wet or dry permeable layer) is found directly below the ponds and a confining layer is below this, will you complete these as monitoring points? OCD has a concern that if the ponds are leaking into this shallow zone then it could be leaving your property without monitoring.

RE: Well Placement Approval

Dear Mr. Price and Mr. Cobrain:

Over the past several years, your offices and Giant discussed replacement and addition of wells along the property boundaries in the Northwest corner of the Ciniza Refinery. We submitted a map and description of the proposed wells in our monthly progress reports of 2003. We also included a request for closure of Wells OW-2 and OW-3. The new wells will provide better information about groundwater quality in the area currently monitored by OW-2 and OW–3.

As we understand it, the purpose of these new wells is to ensure that no contamination of groundwater has occurred and to provide a means to monitor the groundwater on a regular schedule (annually) to ensure that any potential future contamination is discovered.

Included with this request for approval and concurrence of the placement of the wells, is the estimated costs (supplied by Precision Engineering, Inc.) for drilling of up to nine wells in three locations and the closure of OW-2 and OW-3 (~$66,000). We estimate analytical costs at about $3000/well for the initial sampling, for a total project cost of ~$100,000.

Because this is a very significant project with substantial costs, Giant requests your concurrence for the location and purpose of the new wells and the closure of OW-2 and OW-3. Once we receive your approval, Ciniza will prepare an internal Request for Expenditure for these funds.

We plan to start drilling in early June, 2003. Your prompt attention and written response is needed to secure the funds in time to meet our proposed start date.

Re: Proposal for Refinery Boundary Wells
Ciniza Refinery Facility Site

Dorinda,

This letter is our proposal for installation of monitoring wells at the perimeter of the refinery property. Briefly summarized we understand the scope of services will be to install up to three (3) wells at each of three (3) locations (up to nine (9) wells total). Additionally, two existing wells, OW-2 and OW-3, will be closed and permanently sealed. Below is a list and brief description of the tasks that will be performed to accomplish the required work to the satisfaction of the OCD, who we understand is requiring the work. Should you require, we will discuss our proposed scope with the OCD so that there is an understanding with all parties as to our perception of the project needs.

Task 1

Mobilize all materials and equipment to the site (Ciniza Refinery). Precision Engineering, Inc. will furnish all equipment, personnel, and materials to construct the wells and close out the existing wells. In the past, as a cost saving measure the Refinery has elected to furnish some materials (bagged cement, and concrete mix as examples). Should the Refinery wish to do this for the proposed project the final fee will be adjusted accordingly. Precision Engineering, Inc. will provide lodging and per diem for all its personnel assigned to the project.

Task 2

Meet with project related personnel and stake the well locations. The wells at the site are anticipated to be artesian. New Mexico State guidelines indicate that all wells that are artesian in nature are subject to the requirements of the Office of the State Engineer and as such will require permitting. Precision Engineering, Inc. will assist Giant Refining Company in obtaining the required permits to install the wells. Precision Engineering, Inc. will also notify all individuals as required by law as to the time of installation and will invite all OSE officials to be present during the installation. It is unlikely these regulatory officials will wish to be present, however, it is our responsibility to make the offer.

Task 3

One boring will be advanced at each of the three locations for the purpose of obtaining a detailed stratigraphic log of the site formation. The boring will be sampled continuously using a static split barreled intrusion sampler mounted ahead of the advancing auger. The samples will be logged in detail with special attention paid to the notation of free water locations. This log will be used to locate water bearing zones above the soil/Chinle Formation interface. Precision Engineering, Inc. will meet with project related personnel and decisions concerning the location of screens will be made. Historically, a gravelly or sandy horizon has been observed to directly overly the unweathered Chinle Formation. At many locations at the site this permeable zone is water bearing as a result of water accumulation on top of the impervious siltstones and claystones that form the bulk of the Chinle Shales. Assuming this zone is water bearing a monitoring well will be placed with screen crossing the entire thickness of this layer. If the zone is not water bearing a decision will be made with the concurrence of the Refinery Environmental Department representative and, if necessary, representatives of appropriate regulatory agencies. These wells will be described as "interface wells" and the gravel layer itself will be referred to as the "interface zone" when referred to in this document.

Where the log of the boring indicates there are sand zones above the interface layer that are water bearing an additional well will be placed that discretely monitors the water from that upper zone. Screen length may vary somewhat in these wells since thickness of the zone(s) being monitored are anticipated to vary. Again, prior to placing the screens concurrence from project related parties will be obtained. The wells located above the interface zone will be labeled as the "sand wells" and the monitored zones will be known as the "sand zones" where referred to later in this document.

In addition to the wells monitoring the recent alluvial and fluvial sediments above the Chinle Formation, an additional well will be advanced to the Sonsela Sandstone; a named sandstone bed within the Chinle Formation. It is anticipated that installation of these wells will require a change of drilling methods to rotary. Currently it is planned to use "foam" to drill the borings. The use of foam as a drilling agent will require little water and has no significant environmental impact of the surface or subsurface. The well will be placed to monitor the water that is migrating through the Sonsela Sandstone bed. The well designation in this document will be "Sonsela well".

All wells placed for this activity will be constructed using two (2) inch nominal diameter, schedule 40, PVC riser pipe. Screens will be constructed of machine slotted schedule 40, PVC. Slotted pipe will have openings of 0.010 inch (#10). All wells will have bottom end caps. The screen and casing will be equipped with centralizers that will keep the casing centered in the bore hole and vertical. Centralizers will be placed at a maximum of twenty foot intervals to keep the relatively small diameter casing from buckling. In the deep wells the casing will be suspended as well to prevent buckling.

The screen will be sand packed from a point one (1) foot below the bottom of the screen to a point two (2) feet above the top of the screen. The sand will be sized to limit the amount of fines that migrate laterally into the well. A standard 10-20 grading will be used. It should be noted that because of the limited amount of water available in some of the water bearing sands and their proximity to adjacent clays, development of the wells to clear water is considered unlikely.

A layer of montmorillonite clay (bentonite) pellets a minimum of two (2) feet in thickness will be placed immediately above the sand. It is anticipated that the wells will be somewhat artesian. As a result bentonite coated with "confectioner's lacquer" will be used to retard the reaction (hydration) with water until the pellets are at the desired location. The confectioner's lacquer is a food grade product and will not impact the water quality of the wells. Once the montmorillonite clay has hydrated, the wells will be grouted to the surface with slurry comprised of 6% montmorillonite clay (bentonite) and 94% Portland Type I-II cement.

Once the slurry has been allowed to set, an above ground vault will be constructed. The vault will be constructed of a six (6) inch steel casing mounted in a four (4) foot square pad. At locations where the vault is in danger of being hit by traffic, three (3) inch diameter steel bollards filled with concrete will be placed in the surface pad as well. The pad will be sloped away from the vault pipe to facilitate drainage away from the well annulus.

The primary steel vault that shields the PVC riser pipe will extend into the surface pad approximately twenty-four (24) inches. The steel protective vault will be capped with a lockable aluminum protective casting that indicates the vault contains a monitoring well. The exterior surface of the cap will be imprinted with the well designation. The interior of the cap will have the date the well was placed, total depth of the well, amount of screen and the contact where logs can be obtained. The PVC riser pipe will be equipped with a lockable expansion cap. Locks will not be provided, however, keyed alike locks can be provided if requested.

Drilling will be accomplished using the following unit or combination of drilling units:

CME 75D and CP-650

Task 4

The wells will be purged and developed. The primary purpose of the purge and development is to clean the sediment from the sanding effort. Developing the wells to produce clear water will not be part of the development process.

Task 5

After all work is complete at each of the three locations the site will be cleaned up and restored as close as practical to the predrilling condition. Cuttings will be leveled, or if they are contaminated they will be transported to a holding area as designated by Giant Refining Company Environmental Department representatives.

Task 6

After it is determined the wells that are installed in the above tasks are producing at a rate acceptable to Giant Refining Company, wells designated as OW-2 and OW-3 will be closed. Both wells report they have been finished with grouted in place PVC casing making pulling the casing impossible or impractical at best. It is proposed that the closure process be as follows:

1) Tremmie a fluidized portland cement grout from the bottom of the well to the top. Grout will be treated with fluidizing agents so that it will intrude into the formation and all gravel pack areas.

2) A heavy portland cement grout will then be pumped into the well and pressurized to fill all annular spaces. Since the casing has been grouted in place, casing splitting then grouting will not be required.

3) Grout volume will be monitored. A grout volume that is a minimum of one and three-fourths (1-¾) of the computed theoretical volume of the well will be injected.

4) The surface vaults will be removed and disposed of at a location on the facility property designated by Giant Refining Company.

5) Any exposed casing will be cut off below grade and the site will be cleaned up and leveled.

Task 7

Well collar (ground) elevations and top of casing elevations will be determined.

Task 8

Logs and notes taken during the installation of the wells and during the closure of OW-2 and OW-3 will be provided to Giant Refining Company. All well stratigraphy will be entered into the Giant Refining-Ciniza data base kept by Precision Engineering, Inc. Although subsurface models will not be updated as a part of this project the information will be available for incorporation into any future subsurface model updates required by the client.

End of Tasks

Because of the decisions that must be made on the site as well as the need for accurate and detailed logging, a registered professional geological engineer as well as a geologist will be present at the site at all times throughout the project. The engineer and geologist assigned to this project are:

William H. Kingsley, PE and Nathan A. Sanders

Additional technicians will be used on this project as required. If you require resumes of the above personnel please contact our office.

Because the presence or absence of water above the interface zone is not known at the facility boundary, a lump sum price is not practical. It is also not 100% certain that there will be water at the interface zone, although it is assumed that this will be a monitoring point. It is known that the Sonsela Sandstone is located at all points below the facility property. The following has been developed considering the variable nature of the upper sediments.

Mobilization:	**$4,750.00**
Drill and Log Continuous Boring (Three Locations lump sum):	**$6,930.00**
Install Interface Wells (per Each):	**$2,140.00**
Drill and Install Sand Wells (per Each):	**$2,870.00**
Drill and Install Sonsela Wells (Three Wells lump sum):	***$36,500.00**
Close Wells OW-2, OW-3 (lump sum):	**$1,700.00**

* - If 4" materials are used for these wells - **$37,310.00**

If the total possible scope of this project is performed there will be a total of three (3) sand wells, three (3) interface wells, and three (3) Sonsela wells. The nine (9) wells will be located on a total of three (3) sites on the Giant Refining-Ciniza Refinery Site. For the purpose of this proposal it

has been assumed that the sand wells will not exceed seventy (70) feet in depth, the interface wells will not exceed ninety (90) feet in depth, and the Sonsela wells will not exceed a total depth of one hundred sixty (160) feet. If all portions of the project are performed, and the 4" material option is selected for the Sonsela wells only, the fee will not exceed **$65,720.00**.

New Mexico Gross Receipts Tax at a rate of 6.5% ($4,271.80 max.) will be added to the final fee for this project.

We will schedule the project to fit your timelines upon receipt of notice to proceed. If you have questions concerning the intent of the proposal or require clarification concerning the proposed tasks, contact our office. We look forward to working with you on this project.

Sincerely,
Precision Engineering, Inc.

In addition to the wells monitoring the recent alluvial and fluvial sediments above the Chinle Formation, an additional well will be advanced to the Sonsela Sandstone; a named sandstone bed within the Chinle Formation. It is anticipated that installation of these wells will require a change of drilling methods to rotary. Currently it is planned to use "foam" to drill the borings. The use of foam as a drilling agent will require little water and has no significant environmental impact of the surface or subsurface. The well will be placed to monitor the water that is migrating through the Sonsela Sandstone bed. The well designation in this document will be "Sonsela well".

All wells placed for this activity will be constructed using two (2) inch nominal diameter, schedule 40, PVC riser pipe. Screens will be constructed of machine slotted schedule 40, PVC. Slotted pipe will have openings of 0.010 inch (#10). All wells will have bottom end caps. The screen and casing will be equipped with centralizers that will keep the casing centered in the bore hole and vertical. Centralizers will be placed at a maximum of twenty foot intervals to keep the relatively small diameter casing from buckling. In the deep wells the casing will be suspended as well to prevent buckling.

The screen will be sand packed from a point one (1) foot below the bottom of the screen to a point two (2) feet above the top of the screen. The sand will be sized to limit the amount of fines that migrate laterally into the well. A standard 10-20 grading will be used. It should be noted that because of the limited amount of water available in some of the water bearing sands and their proximity to adjacent clays, development of the wells to clear water is considered unlikely.

A layer of montmorillonite clay (bentonite) pellets a minimum of two (2) feet in thickness will be placed immediately above the sand. It is anticipated that the wells will be somewhat artesian. As a result bentonite coated with "confectioner's lacquer" will be used to retard the reaction (hydration) with water until the pellets are at the desired location. The confectioner's lacquer is a food grade product and will not impact the water quality of the wells. Once the montmorillonite clay has hydrated, the wells will be grouted to the surface with slurry comprised of 6% montmorillonite clay (bentonite) and 94% Portland Type I-II cement.

Once the slurry has been allowed to set, an above ground vault will be constructed. The vault will be constructed of a six (6) inch steel casing mounted in a four (4) foot square pad. At locations where the vault is in danger of being hit by traffic, three (3) inch diameter steel bollards filled with concrete will be placed in the surface pad as well. The pad will be sloped away from the vault pipe to facilitate drainage away from the well annulus.

The primary steel vault that shields the PVC riser pipe will extend into the surface pad approximately twenty-four (24) inches. The steel protective vault will be capped with a lockable aluminum protective casting that indicates the vault contains a monitoring well. The exterior surface of the cap will be imprinted with the well designation. The interior of the cap will have the date the well was placed, total depth of the well, amount of screen and the contact where logs can be obtained. The PVC riser pipe will be equipped with a lockable expansion cap. Locks will not be provided, however, keyed alike locks can be provided if requested.

Drilling will be accomplished using the following unit or combination of drilling units:
CME 75D and CP-650

Task 4

The wells will be purged and developed. The primary purpose of the purge and development is to clean the sediment from the sanding effort. Developing the wells to produce clear water will not be part of the development process.

Task 5

After all work is complete at each of the three locations the site will be cleaned up and restored as close as practical to the predrilling condition. Cuttings will be leveled, or if they are contaminated they will be transported to a holding area as designated by Giant Refining Company Environmental Department representatives.

Task 6

After it is determined the wells that are installed in the above tasks are producing at a rate acceptable to Giant Refining Company, wells designated as OW-2 and OW-3 will be closed. Both wells report they have been finished with grouted in place PVC casing making pulling the casing impossible or impractical at best. It is proposed that the closure process be as follows:

1) Tremmie a fluidized portland cement grout from the bottom of the well to the top. Grout will be treated with fluidizing agents so that it will intrude into the formation and all gravel pack areas.

2) A heavy portland cement grout will then be pumped into the well and pressurized to fill all annular spaces. Since the casing has been grouted in place, casing splitting then grouting will not be required.

3) Grout volume will be monitored. A grout volume that is a minimum of one and three-fourths (1-¾) of the computed theoretical volume of the well will be injected.

4) The surface vaults will be removed and disposed of at a location on the facility property designated by Giant Refining Company.

5) Any exposed casing will be cut off below grade and the site will be cleaned up and leveled.

Task 7

Well collar (ground) elevations and top of casing elevations will be determined.

Task 8

Logs and notes taken during the installation of the wells and during the closure of OW-2 and OW-3 will be provided to Giant Refining Company. All well stratigraphy will be entered into the Giant Refining-Ciniza data base kept by Precision Engineering, Inc. Although subsurface models will not be updated as a part of this project the information will be available for incorporation into any future subsurface model updates required by the client.

End of Tasks

Because of the decisions that must be made on the site as well as the need for accurate and detailed logging, a registered professional geological engineer as well as a geologist will be present at the site at all times throughout the project. The engineer and geologist assigned to this project are:

William H. Kingsley, PE and Nathan A. Sanders

Additional technicians will be used on this project as required. If you require resumes of the above personnel please contact our office.

Because the presence or absence of water above the interface zone is not known at the facility boundary, a lump sum price is not practical. It is also not 100% certain that there will be water at the interface zone, although it is assumed that this will be a monitoring point. It is known that the Sonsela Sandstone is located at all points below the facility property. The following has been developed considering the variable nature of the upper sediments.

Mobilization:	**$4,750.00**
Drill and Log Continuous Boring (Three Locations lump sum):	**$6,930.00**
Install Interface Wells (per Each):	**$2,140.00**
Drill and Install Sand Wells (per Each):	**$2,870.00**
Drill and Install Sonsela Wells (Three Wells lump sum):	***$36,500.00**
Close Wells OW-2, OW-3 (lump sum):	**$1,700.00**

* - If 4" materials are used for these wells - **$37,310.00**

If the total possible scope of this project is performed there will be a total of three (3) sand wells, three (3) interface wells, and three (3) Sonsela wells. The nine (9) wells will be located on a total of three (3) sites on the Giant Refining-Ciniza Refinery Site. For the purpose of this proposal it

has been assumed that the sand wells will not exceed seventy (70) feet in depth, the interface wells will not exceed ninety (90) feet in depth, and the Sonsela wells will not exceed a total depth of one hundred sixty (160) feet. If all portions of the project are performed, and the 4" material option is selected for the Sonsela wells only, the fee will not exceed **$65,720.00**.

New Mexico Gross Receipts Tax at a rate of 6.5% ($4,271.80 max.) will be added to the final fee for this project.

We will schedule the project to fit your timelines upon receipt of notice to proceed. If you have questions concerning the intent of the proposal or require clarification concerning the proposed tasks, contact our office. We look forward to working with you on this project.

Sincerely,
Precision Engineering, Inc.

William H. Kingsley, PE

RE: February/March 2003 Progress Report
Giant Refining Co., Ciniza Refinery GW-032 Discharge Plan

Dear Mr. Price:

As your office has requested, Ciniza is submitting a progress report on the Discharge Plan renewal issues identified in our 12/10/02 meeting. The Draft Permit will be submitted to your office by June 15, 2003.

1. Three additional nested wells around ponds - We anticipate that the drilling will start the first week in June, 2003. We would like to confirm your approval of the proposed sites ASAP so that we can request the funds for this work. It is unlikely that Ciniza will receive the funds unless the state concurs in writing that our plan meets their approval. We will send a letters under separate cover asking for OCD and NMED concurrence. BY MAY 01, 2003 LETTER

2. Investigate tank farm area near recovery wells and install possible French drain – Enclosed are logs from the following borings: 656, 657, 658, 659, 665, and 668. These logs represent borings outside the tank farm dikes, to the north, east and northeast, of Tanks 337, 344, and 345. Please see item # 6 below for the area inside the dike.

3. Investigate around old OW-20 high pH area – Enclosed are the original boring log for OW-20 from January, 1981. On January 14 and 15, 2003, Precision Engineering attempted to drill two different replacement wells in the same area as the original OW-20. We were unsuccessful in replacing OW-20 and closed the well on January 15th. You will find the logs for the attempted replacement wells and the well closure report enclosed. For general information, I am enclosing the well closure procedure used by Precision Engineering.

4. Investigate past OW-29. Find possible channels – Enclosed you will find logs for the following borings near and around the area between the NE corner of the tank farm and the North boundary of the plant: b-1(B1), b-3(B3), 643, 648, 649, MP-4, and MP-9.

5. Inspect the truck center – **At your convenience.**

PHONE
505-722-3833
FAX
505-722-0210

ROUTE 3
BOX 7
GALLUP
NEW MEXICO
87301

6. Find out where OW-17 was located. Now closed, but was originally located w/in tank farm. Sonsela wells were closed in this area. – Please see "close up" map of the area near OW-17 and other wells/borings in the area inside the berms of Tanks 337, 344, and 345. Logs enclosed include: 666, 667, RW-5 (recovery well), RW-6 (recovery well). Also enclosed are the original logs and well closure reports for wells: OW-16, OW-17, OW-25 and OW-26.

7. Prevent runoff from the old temporary pond area – **Complete**.

8. Show drainage ditches on drawings – **Will be included w/Discharge Plan Application due to your office by June 15, 2003.**

9. Submit storm water plan – see #8 above

10. Giant wants to monitor only OW-11, 12, 14, 29, 30 and MW 4 – **Groundwater results for all wells sampled in 2002 will be submitted to NMED, RCRA Programs and OCD on June 1, 2003 along with the Discharge Plan Application.**

11. Giant wants to close OW-2 and OW-3 and replace with new ones – see #1 above.

12. Giant does not want to monitor OW-1, OW-9, and OW-10. RCA wants these wells to be checked to make sure they are still under artesian conditions – No additional information.

13. NMED (RCRA) wants MW-1, 4, 5 and SMW-4 monitored (LTU) – **See # 10 above.**

14. RCA wants Pond #2 sampled – **We would like to confirm this before we submit the discharge plan. As we understand this item, the outlet at Pond #2 will be the compliance point for sampling for the wastewater treatment system / evaporation pond system interface. Parameters will be established by OCD as part of the new Discharge Plan. Ciniza would like to confirm this interpretation as soon as possible.**

15. Old API must be rebuilt or demonstrate that it is not leaking – The API Separator is scheduled for cleaning and inspection the week of April 28, 2003.

16. Giant must complete pressure testing all plant drain lines, sumps, including the tank farms, etc. by 6/1/03. – **No further sewer testing was completed in February or March 2003. We would like to propose completing 80% of the sewer testing by 12/31/03 and the last 20% by 12/31/2004.**

17. Giant must complete Discharge Plan submittal by 10/1/03 with monthly progress reports – **In progress. To be submitted by 6/15/03.**

18. RCA wants monthly progress reports. – This report for February and March 2003 will be the last submitted.

19. Issues of geological channels need to be resolved – To be resolved.

20. LWP to spell out in DP all samples to be taken from which wells and analysis, including frequency – **To be determined**.

Please feel free to contact me at 505.722.0227 or @ ***dmancini@giant.com*** with any questions or concerns you have regarding this report. Thank you for your assistance with our Discharge Plan submittal.

Sincerely,

Dorinda Mancini

12/10/02 Meeting held with Giant-Ciniza: GW-032 Dorinda Mancini, Ed Riege, LWP, RCA, Dave Cobrain.

Minutes of meeting: OCD to require the following:

1. Three additional nested wells around ponds.

2. Investigate tank farm area near recovery wells and install possible French drain

3. Investigate around old OW-20 high PH area

4. Investigate past OW-29 Find possible channels

5. Inspect the truck center

6. Find out where old OW17 was located. Now closed was inside of tank farm. Sonsela wells were closed in this area.

7. Prevent run-off from old pond area.

8. Show drainage ditches on drawings

9. Submit storm water plan

10. Giant wants to monitor only OW-11,12,14,29, 30 + MW-4

11. Giants wants to close OW-2&3 replace with new ones

12. Giant does not want to monitor OW-1,9,10 RCA wants these wells to be checked to make sure they are still under Artesia conditions.

13. NMED (RCRA) wants MW-1,4,5 SWM-4 old LTU

14. RCA wants pond #2 to be sampled.

15. Old API must be rebuilt or demonstrate it is not leaking.

16. Giant must complete pressure testing all plant drain lines, sumps, including tank farms, etc. by June 1, 2003

17. Giant must complete DP submittal by Oct 1, 2003 with monthly progress reports.

18. RCA wants monthly progress report.

19. Issues of geological channels needs to be resolved.

20. LWP to spell out in DP all samples to be taken from which wells and analysis, including frequency.

Ms. Dorinda Mancini
Giant Refining Company
Ciniza Refinery
Route 3, Box 7
Gallup, New Mexico 87301

Re: Well Closure Procedures

Dear Ms. Mancini,

As you are aware there a variety of monitoring well installation types at the Ciniza Refinery site. The following summarizes a proposed task scenario for a typical well closure at the Ciniza facility.

Task I: Remove all surface vaults and protective casings.

Task II: Determine if the casing has been grouted into the formation.

A: If the casing has been grouted a determination will be made as to the potential for pulling the casing. If the casing cannot be safely extracted or cannot be extracted with reasonable effort, proceed to Task III.

B: If the casing has not been grouted in place, an attempt to pull the casing will be made. If the casing cannot be pulled, the casing will be split to expose the drilling annulus. The casing will be split to a point just above the screens or perforations.

Task III: Grout tremmie tubing will be placed to the bottom of the well with a packer set just above the screens. A light grout consisting of a fluidized portland cement/montmorillonite clay (bentonite) mix will be injected into the screened zone. The grout mix will be pumped into the well and monitored for pressure and volume. The grout will be injected until the injection volume is equal to 1.5 times the calculated volume of the well and pressures indicate intrusion into the formation. A heavy grout will then be injected into the well until pump pressure stabilizes. Injection will stop, pressure will be allowed to drop, the packer(s) will be removed.

A: If the casing has been grouted in place, the remainder of the casing will then be grouted to the surface with a heavy fluidized portland cement/montmorillonite clay (bentonite) grout.

B: If the casing has not been grouted in place, the remaining annulus will be filled with a light grout as described above followed by a heavy grout when the annulus has stopped taking the light grout.

Task IV: The grout will be allowed to cure twenty four (24) hours. Any shrink back will then be filled with grout to the surface.

Task V: A closeout report will be provided to the client for final filing.

If you have any questions or comments, please call our office.

Sincerely,
Precision Engineering, Inc.

William H. Kingsley, P.E.

RE: Ciniza Refinery, Giant Refining Co.
Groundwater Discharge Permit Renewal (GW-32)

Dear Mr. Price:

Enclosed you will find the following documents:

- Letter from Bill Kingsley detailing the activities near Tanks 337, 344, and 345
- Boring and Closure Records for wells OW-16, OW-17, OW-25, and OW-26
- Boring Logs and Well Diagrams for Recovery Wells RW-5 and RW-6
- Boring Logs and Well Diagrams for OW-27 (Recovery Well RW-1)
- Boring Logs and Well Diagrams for OW-28 (Recovery Well RW-2)
- A copy of the map from the 2001 Comprehensive GW sampling report showing the addition of the location of OW-17
- A map of the Tank Farm and approximate locations of wells.
- Boring Log, Closure Report, and boring logs of potential replacement wells for OW-20; OW-20 was not replaced because no water or contamination was found in the area. A copy of the well closure procedure is also enclosed.

If you have any questions or comments regarding this report, please call me at 505.722.0227. Thank you for assistance with our permit renewal.

Sincerely,

Dorinda Mancini

Re: August 23 – 29 Activities

Dear Dorinda,

This letter summarizes our activities within the tank farm inside the containment berm surrounding Tanks 337, 345 and 344. The purpose of the work was to evaluate whether or not product discovered in OW-17(RW-4) and OW-25(RW-3) was associated with a gravelly zone lying directly on top of the Chinle formation or from a sandstone stringer, likely associated with the upper portion of the Sonsela Sandstone bed within the Chinle Formation.

It is known that OW-17(RW-4), OW-25(RW-3), OW-16, and OW26 are screened in the sandstone stringer, most likely representing the upper portion of the Sonsela Sandstone. Wells OW-17(RW-4) and OW-25(RW-3) also have gravel packs that extend into the gravelly zone that lies on top of the Chinle; OW-16 and OW-26 do not. At the time of the investigation both OW-17(RW-4) and OW-25(RW-3) had substantial free product accumulation (approximately 20 inches); OW-16 and OW-26 had no physical evidence of contamination. It was therefore suspected that the contamination was coming from the upper gravelly layer that lies directly on top of the Chinle Shale.

The free product was pumped from OW-17(RW-4) and OW-25(RW-3). The level was monitored in the casing and approximately one eighth (⅛) inch of free product was observed after 24 hours. It was decided that the one eighth (⅛) inch of free product could have come from drip-down inside the casing. It was also decided with the high initial level of free product it was likely that greater than one eighth (⅛) inch should accumulate after a 24 hour period. It was decided to advance two additional borings offset from each of OW-17(RW-4) and OW-25(RW-3) that would be drilled to the top of the Chinle Shale to penetrate the gravelly zone alone.

The borings were advanced. Within one hour of completion of each boring approximately twenty (20) inches of free product was observed in each boring. The borings were then converted to wells and named RW-5, which is offset 10' east of OW-25(RW-3) and RW-6 which is offset north of OW-17(RW-4). These wells were subsequently setup as recovery wells using air driven downhole bladder pumps.

Screen records of the OW-17(RW-4) and OW-25(RW-3) show screen below the Alluvium/Chinle interface. When the wells were used for product recovery the water level was drawn

below the top of the screen and the product was introduced into the interior of the casing where it was pumped out. The only reason the Sonsela remained unaffected in the wells was because the artesian properties of the Sonsela Sandstone bed developed excess hydrostatic head keeping the product from intruding into the formation. It is strongly recommended that the wells OW-17(RW-4) and OW-25(RW-3) be permanently closed to seal off the possibility of communication between the formations.

If you have any questions please contact our office.

Sincerely,
Precision Engineering, Inc.

William H. Kingsley, P.E.

Re: Well Closure Procedures

Dear Ms. Mancini,

As you are aware there a variety of monitoring well installation types at the Ciniza Refinery site. The following summarizes a proposed task scenario for a typical well closure at the Ciniza facility.

Task I: Remove all surface vaults and protective casings.

Task II: Determine if the casing has been grouted into the formation.

A: If the casing has been grouted a determination will be made as to the potential for pulling the casing. If the casing cannot be safely extracted or cannot be extracted with reasonable effort, proceed to Task III.

B: If the casing has not been grouted in place, an attempt to pull the casing will be made. If the casing cannot be pulled, the casing will be split to expose the drilling annulus. The casing will be split to a point just above the screens or perforations.

Task III: Grout tremmie tubing will be placed to the bottom of the well with a packer set just above the screens. A light grout consisting of a fluidized portland cement/montmorillonite clay (bentonite) mix will be injected into the screened zone. The grout mix will be pumped into the well and monitored for pressure and volume. The grout will be injected until the injection volume is equal to 1.5 times the calculated volume of the well and pressures indicate intrusion into the formation. A heavy grout will then be injected into the well until pump pressure stabilizes. Injection will stop, pressure will be allowed to drop, the packer(s) will be removed.

A: If the casing has been grouted in place, the remainder of the casing will then be grouted to the surface with a heavy fluidized portland cement/montmorillonite clay (bentonite) grout.

B: If the casing has not been grouted in place, the remaining annulus will be filled with a light grout as described above followed by a heavy grout when the annulus has stopped taking the light grout.

Task IV: The grout will be allowed to cure twenty four (24) hours. Any shrink back will then be filled with grout to the surface.

Task V: A closeout report will be provided to the client for final filing.

If you have any questions or comments, please call our office.

Sincerely,
Precision Engineering, Inc.

William H. Kingsley, P.E.

RE: January 2003 Progress Report
Giant Refining Co., Ciniza Refinery GW-032 Discharge Plan

Dear Mr. Price:

As your office has requested, Ciniza is submitting a progress report on the Discharge Plan renewal issues identified in our 12/10/02 meeting. Each month we will update you on progress made on the individual issues included in your meeting summary report. We have numbered the issues to make it easier to document and report. A copy of your list is attached. Enclosed is a copy of a facility drawing prepared by Bill Kingsley and previously used to discuss the site. We have also included a map of the main tank farm.

1. Three additional nested wells around ponds - Bill Kingsley, of Precision Engineering, Inc., visited the refinery on 1/29/03 to discuss and locate 3 potential sites on the north and west perimeter of the site. A map of the locations was faxed to you, but we were not able to discuss these with you at the time. Bill will put together a packet containing costs, time requirements, well construction details and any other pertinent information. We will include it in next month's report. He believes that these areas will give us the greatest probability of finding water. As soon as the new wells at the appropriate depths are producing, we would like to close OW-2 and OW-3. We have submitted details previously about the poor construction and production from these wells. Closing the wells on the same trip will save Giant a significant amount over having to schedule and mobilize Precision Engineering a second time for the well closings. Bill feels that the new wells will provide better monitoring for the groundwater in this area. Giant will notify OCD and HWB prior to drilling so that you will have time to schedule a site visit. (Dark blue dots on the map.)

2. Investigate tank farm area near recovery wells and install possible French drain – Bill Kingsley has logs from borings in the areas of both tank farm sites where recovery wells are located. These will be sent in one of the monthly progress reports. Please see the enclosed site map and tank farm maps for more information. Some of the borings are north of and outside the tank farm berms. (Circled in red on the map.)

3. Investigate around old OW-20 high pH area – Again, Bill will provide boring data from the area where OW-20 was located. We made several attempts to drill another well in the same area, but encountered no water. The site map indicates both the old and new OW-20 locations. (Circled in orange on the map.)

PHONE
505-722-3833
FAX
505-722-0210

ROUTE 3
BOX 7
GALLUP
NEW MEXICO
87301

4. Investigate past OW-29. Find possible channels – OW-29 has never shown any contamination. We are unclear why this area may need to be investigated. We believe that OW-14, which has shown very low levels of contaminants, should continue to be monitored annually for volatiles by Method 8260. (Circled in light green on the map.)

5. Inspect the truck center – Giant's travel center has been notified and is available for inspection at your convenience.

6. Find out where OW-17 was located. Now closed, but was originally located w/in tank farm. Sonsela wells were closed in this area. – Ciniza has submitted this information previously, but will include it again in a future monthly progress report. The site map and tank farm maps are marked to show the area of interest. OW-17 was located near Tank 345. (Circled in red on the map.)

7. Prevent runoff from the old temporary pond area – The west dike on temporary pond #2 had previously been cut to allow normal drainage as requested. When salt in the water from this area became an issue, the cut in the dike was filled in and a 6" pipe with a valve on the outer end was put in place. The valve can be chained and locked in the closed position to prevent unauthorized persons from opening it, if necessary.

8. Show drainage ditches on drawings – Ciniza Refinery has prepared an Integrated Contingency Plan (ICP), including an SPCC plan, and a Stormwater Pollution Prevention Plan (SWP3) which show drainage patterns in addition to materials of significance, tank contents, locations of chemical use and storage, emergency procedures and response plans, etc. These documents will be submitted as 'Volume 2' of the Discharge Plan submittal. Included will be a topographic map of the area. (Site maps enclosed)

9. Submit storm water plan – see #8 above

10. Giant wants to monitor only OW-11, 12, 14, 29, 30 and MW 4 – We would like to develop an appropriate list of wells to be monitored, a sampling schedule that will provide needed information, and a list of parameters appropriate to contaminants needing monitoring. We will propose these as part of our submittal. We believe that OCD's and the HWB's requirements can be met without incurring extraordinary expense and personnel time for Giant.

11. Giant wants to close OW-2 and OW-3 and replace with new ones – see #1 above (Circled in dark blue on the map.)

12. Giant does not want to monitor OW-1, OW-9, and OW-10. RCA wants these wells to be checked to make sure they are still under artesian conditions – We believe that OW-1 should be monitored annually as part of the groundwater discharge plan conditions, along with the 3 new well locations proposed in #1. OW-9 and OW-10 will be visually checked annually at the same time sampling is done to ensure continued artesian conditions. It may be appropriate to sample these 2 wells at 5-year intervals (i.e., as part of the Discharge Plan renewal). As of 2/6/03 these 3 wells have artesian flow. (Circled in light blue on the map.)

13. NMED (RCRA) wants MW-1, 4, 5 and SMW-4 monitored (LTU) – These wells are sampled as required in the RCRA Post-Closure Permit issued 8/17/00. OCD will receive copies of all analytical results at the same time that they are submitted to NMED's Hazardous Waste Bureau.

14. RCA wants Pond #2 sampled – As we understand this item, the outlet at Pond #2 will be the compliance point for sampling for the wastewater treatment system / evaporation pond

system interface. Parameters will be established by OCD as part of the new Discharge Plan. Ciniza would like to confirm this interpretation as soon as possible.

15. Old API must be rebuilt or demonstrate that it is not leaking – The API Separator is scheduled for cleaning and inspection in April, 2003. As we understand the timing on construction for the new API, the unit must be complete and functional by 12/31/04. We would like to confirm this date as soon as possible.

16. Giant must complete pressure testing all plant drain lines, sumps, including the tank farms, etc. by 6/1/03. – Enclosed we are submitting documentation of all testing and repairs completed as of 1/31/03. As the system continues to be inspected, the documentation will be included with the monthly progress reports.

17. Giant must complete Discharge Plan submittal by 10/1/03 with monthly progress reports – We are currently working on the data collection and formatting for the plan using the 'Guidelines for Preparation' as our guidance. As noted above, the facility's ICP, SPCC, and SWP3 plans will provide much of the information required. We would like to confirm this deadline.

18. RCA wants monthly progress reports. – We plan to submit progress reports by the 20th of the month following the activities (2/20/03 for January 2003 activities).

19. Issues of geological channels need to be resolved – OCD and Giant will need to discuss this in more detail with Bill Kingsley. Giant would like some further guidance on OCD's and NMED's concerns. Neither I, nor Ed Riege, were present at the meeting where this was discussed.

20. LWP to spell out in DP all samples to be taken from which wells and analysis, including frequency – Giant will propose a sampling schedule, including wells, parameters and frequency. We will work with OCD and HWB to ensure monitoring will provide adequate information on the groundwater conditions at the facility.

Please feel free to contact me at 505.722.0227 or @ ***dmancini@giant.com*** with any questions or concerns you have regarding this report. Thank you for your assistance with our Discharge Plan submittal.

Sincerely

Dorinda Mancini

12/10/02 Meeting held with Giant-Ciniza: GW-032 Dorinda Mancini, Ed Riege, LWP, RCA, Dave Cobrain.

Minutes of meeting: OCD to require the following:

1. Three additional nested wells around ponds.

2. Investigate tank farm area near recovery wells and install possible French drain

3. Investigate around old OW-20 high PH area

4. Investigate past OW-29 Find possible channels

5. Inspect the truck center

6. Find out where old OW17 was located. Now closed was inside of tank farm. Sonsela wells were closed in this area.

7. Prevent run-off from old pond area.

8. Show drainage ditches on drawings

9. Submit storm water plan

10. Giant wants to monitor only OW-11,12,14,29, 30 + MW-4

11. Giants wants to close OW-2&3 replace with new ones

12. Giant does not want to monitor OW-1,9,10 RCA wants these wells to be checked to make sure they are still under Artesia conditions.

13. NMED (RCRA) wants MW-1,4,5 SWM-4 old LTU

14. RCA wants pond #2 to be sampled.

15. Old API must be rebuilt or demonstrate it is not leaking.

16. Giant must complete pressure testing all plant drain lines, sumps, including tank farms, etc. by June 1, 2003

17. Giant must complete DP submittal by Oct 1, 2003 with monthly progress reports.

18. RCA wants monthly progress report.

19. Issues of geological channels needs to be resolved.

20. LWP to spell out in DP all samples to be taken from which wells and analysis, including frequency.

Ciniza Refinery Sewer Test Form

Test Data for Main Line Upstream of Listed Manhole

Unit:	Crude
Test Fluid:	Water
Test Water Column (ft.):	4 +
Test Duration (min.):	30
Manhole Number:	C-1, C-2, C-3, C-4, C-5, & C-10
Date:	10/31/02

Were all process sewer cup branches from the above manholes filled with water to verify that branch lines held level?

Yes No

Did all branch lines hold level?

Yes No

List any branch lines and location of branch lines that did not hold level (if any):
Sewer cups near C-P1A, & C-PV109 did not hold level. All other sewer cups and branch lines did hold level. A work ticket has been entered to repair the two sewer cups listed above.

Route 3, Box 7
Gallup, New Mexico 87301

Item #3

Re: Well Closure Procedures

Dear Ms. Mancini,

As you are aware there a variety of monitoring well installation types at the Ciniza Refinery site. The following summarizes a proposed task scenario for a typical well closure at the Ciniza facility.

Task I: Remove all surface vaults and protective casings.

Task II: Determine if the casing has been grouted into the formation.

A: If the casing has been grouted a determination will be made as to the potential for pulling the casing. If the casing cannot be safely extracted or cannot be extracted with reasonable effort, proceed to Task III.

B: If the casing has not been grouted in place, an attempt to pull the casing will be made. If the casing cannot be pulled, the casing will be split to expose the drilling annulus. The casing will be split to a point just above the screens or perforations.

Task III: Grout tremmie tubing will be placed to the bottom of the well with a packer set just above the screens. A light grout consisting of a fluidized portland cement/montmorillonite clay (bentonite) mix will be injected into the screened zone. The grout mix will be pumped into the well and monitored for pressure and volume. The grout will be injected until the injection volume is equal to 1.5 times the calculated volume of the well and pressures indicate intrusion into the formation. A heavy grout will then be injected into the well until pump pressure stabilizes. Injection will stop, pressure will be allowed to drop, the packer(s) will be removed.

A: If the casing has been grouted in place, the remainder of the casing will then be grouted to the surface with a heavy fluidized portland cement/montmorillonite clay (bentonite) grout.

B: If the casing has not been grouted in place, the remaining annulus will be filled with a light grout as described above followed by a heavy grout when the annulus has stopped taking the light grout.

Task IV: The grout will be allowed to cure twenty four (24) hours. Any shrink back will then be filled with grout to the surface.

Task V: A closeout report will be provided to the client for final filing.

If you have any questions or comments, please call our office.

Sincerely,
Precision Engineering, Inc.

William H. Kingsley, P.E.

Subject: RE: Monitor wells
Importance: High

Wayne,

The information I have collected incliudes the boring logs for the wells and the closure documentation for the wells which have been closed. I am still waiting on a narrative from Bill Kingsley regarding the sequence of events around the recovery wells and the wells inside the tank farm. Also, I will have to discuss the wells we want to close and if they are the same as we proposed in 1997.

Would you like me to FAX you the boring logs and closure docs? They have alreaqdy been faxed once and are not very clear. I will be able to forward by mail the documents in an 'unfaxed' state once I receive them from Bill. I expect to receive them by tomorrow - Fed EX'd. Also, I cannot complete my report to you until I receive Bill's letter and until I can speak with him on the proposed well closures.

Please let me know how you would like me to proceed. Sorry for the delay - we worked on this all last week after our meeting in SF.

Dorinda

Dorinda, please find attached a list of wells that I found in the 1997 Comprehensive Facility Investigation Work Plan. Please let me know the status of these wells in your report due today. Also let me know if Giant still recommends closure of some of these wells.

Dear Ms. Mancini:

Please find enclosed a copy of the minutes of the meeting we had yesterday in Santa Fe, NM. As a result of our meeting I have the following information request.
Please provide a brief status of all recovery wells, products recovered, latest analytical, and history of these areas including any MW's that have been plugged. As discussed yesterday OCD will require frequent progress reports until time of DP submittal. Please provide this first report by Monday Dec 16, 2002.

12/10/02 Meeting held with Giant-Ciniza: GW-032 Dorinda Mancina, Ed Riege, LWP, RCA, Dave Cobrain.

Minutes of meeting: OCD to require the following:

Three additional nested wells around ponds.

Investigate tank farm area near recovery wells and install French drain

Investigate around old OW-20 high PH area

Investigate past OW-29

Inspect the truck center

Find out where old OW17 was located. Now closed was inside of tank farm. Sonsall wells were closed in this area.

Prevent run-off from old pond area.

Show drainage ditches on drawings

Submit storm water plan

Giant wants to monitor only OW-11,12,14,29, 30 + MW-4

Giants wants to close OW-2&3 replace with new ones

Giant does not want to monitor OW-1,9,10 RCA wants these wells to be checked to make sure they are still under Artesia conditions.

NMED wants MW-1,4,5 SWM-4 old LTU

RCA wants pond #2 to be sampled.

Old API must be rebuilt or demonstrate it is not leaking.

Giant must complete pressure testing all plant drain lines including tank farms, etc. by June 1, 2003

Giant must complete DP submittal by Oct 1, 2003

RCA wants monthly progress report.

Issues of geological channels needs to be resolved.

LWP to spell out in DP all samples to be taken from which wells and analysis, including frequency.

Subject: Discharge Permit Schedule
Importance: High

Mr. Price:

This note is to confirm our conversation of yesterday. I plan on sending the Spring 2001 Comprehensive Groundwater Report by early next week (4/8/02). At that time I should be able to give you a discharge permit application completion schedule. Please feel free to contact me at (505) 722-0227 if you any questions or concerns regarding these issues.

Sincerely,

Dorinda Mancini

NOTICE OF PUBLICATION

STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge plan applications has been submitted to the Director of the Oil Conservation Division, 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-077) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Middle Mesa Natural Gas Compressor Station located in the SW/4 SW/4 of Section 10, Township 31 North, Range 7 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 150-200 feet with an estimated total dissolved solids concentration of approximately 1400 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-239) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Quinn Natural Gas Compressor Station located in the NW/4 SW/4 of Section 16, Township 31 North, Range 8 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1700 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-255) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Buena Vista Natural Gas Compressor Station located in the NW/4 NE/4 of Section 13, Township 30 North, Range 9 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 30 feet with an estimated total dissolved solids concentration of approximately 1100 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-258) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Cedar Hill Natural Gas Compressor Station located in the SW/4 SW/4 of Section 29, Township 32 North, Range 10 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1100 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be

of Section 16, Township 31 North, Range 8 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1700 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-255) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Buena Vista Natural Gas Compressor Station located in the NW/4 NE/4 of Section 13, Township 30 North, Range 9 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 30 feet with an estimated total dissolved solids concentration of approximately 1100 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-258) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Cedar Hill Natural Gas Compressor Station located in the SW/4 SW/4 of Section 29, Township 32 North, Range 10 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1100 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-35) - Conoco, Inc., Mr. Lane Ayers, (505)-632-4906, P.O. Box 217 Bloomfield, New Mexico 87413, has submitted a Discharge Plan Renewal Application for their San Juan Gas Plant located in the NW/4 NW/4, Section 14, Township 29 North, Range 11 West, NMPM, San Juan County, New Mexico. Approximately 790,950 gallons per month of waste water is discharged onsite into an above ground bermed closed top tank and two double lined surface evaporation ponds with leak detection prior to transport offsite at an approved OCD disposal facility; Groundwater most likely to be affected by a spill, leak, or accidental discharge to the surface is at a depth of approximately 15 to 55 feet with a total dissolved solids concentration of approximately 4,400 mg/L. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

NOTICE OF PUBLICATION

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge plan applications has been submitted to the Director of the Oil Conservation Division, 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-077) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Middle Mesa Natural Gas Compressor Station located in the SW/4 SW/4 of Section 10, Township 31 North, Range 7 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported offsite to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 150-200 feet with an estimated total dissolved solids concentration of approximately 1400 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-239) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Quinn Natural Gas Compressor Station located in the NW/4 SW/4 of Section 16, Township 31 North, Range 8 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported offsite to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1700 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-255) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Buena Vista Natural Gas Compressor Station located in the NW/4 NE/4 of Section 13, Township 30 North, Range 9 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported offsite to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 30 feet with an estimated total dissolved solids concentration of approximately

1100 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-258) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Cedar Hill Natural Gas Compressor Station located in the SW/4 SW/4 of Section 29, Township 32 North, Range 10 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported offsite to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1100 mg/l. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-032) - GIANT REFINING Company, Ms Dirinda Mancini, (505)-722-3833Route 3, Box 7, Gallup, New Mexico, 87301 has submitted a modification application for the previously approved discharge plan for their Ciniza Refinery located in Section 28 and Section 33, Township 15 North, Range 15 West, NMPM, Mckinley County, near Gallup, New Mexico. The total discharge of process and non-process wastewater from the facility is about 160,000 gallons/day with an estimated total dissolved solids concentration with a range of about 2,000 mg/l to 3,000 mg/l. Groundwater most likely to be affected by a spill, leak, or accidental discharge to the surface varies in depth from 70 feet to 140 feet with an approximate total dissolved solids concentration of 950 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-28) - Navajo Refining Company, Darrell Moore, (505) 746-5281, P.O. Box 159, Artesia, New Mexico, 88211-0159 has submitted an application for renewal of its previously approved discharge plan for the Artesia Refinery located in the SE/4 of Section 1, E/2 of Section 8, W/2 of Section 9, N/2 of Section 12, Township 17 South, Range 26 East, NMPM, Eddy County, New Mexico. Approximately 400,000 gallons per day of treated refinery waste water with a total dissolved solids concentration of approximately 2,300 mg/l is discharged from the facility waste water treatment plant by pipeline to two Class I (non-hazardous) deep injection wells located in Sec 31- Ts 17s-R 28 e and Sec 12-Ts 18s-R27e of Eddy County, New Mexico and discharges approximately 150,000 gallons per day of Reverse-Osmosis Reject water used to irrigate two adjacent farms owned and operated by Navajo Refining Company. Ground water most likely to be affected by an accidental discharge in the refinery area is at a depth of approximately [redacted] feet with a total dissolved solids concentration of approximately 2,500 mg/l, and in the pond area ground water is at a depth of 5 to 10 feet with a total dissolved solids concentration of approximately 6,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed including methods and procedures for handling products, waste, waste water management, and site investigation/ abatement plans.

(GW-014) - Navajo Refining Company, Darrell Moore, (505) 748-5281, P.O. Box 159, Artesia, New Mexico, 88211-0159 has submitted an application for renewal of its previously approved discharge plan for the Lovington Refinery located in the SW/4 of Section 31, Township 16 South, Range 37 East; the SE/4 of Section 36, Township 16 South, Range 36 East; the NW/4 of Section 6, Township 17 South, Range 37 East; and the NE/4 of Section 1, Township 17 South, Range 36 East NMPM, Lea County, New Mexico. Approximately 101,000 gallons per day of treated refinery waste water with a total dissolved solids concentration of approximately 1,300 mg/l will undergo treatment in a USEPA regulated pretreatment unit prior to discharge to the City of Lovington publicly owned treatment works (POTW). Ground water most likely to be affected by an accidental discharge is at a depth of approximately 90 feet with a total dissolved solids concentration of approximately 500 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed including methods and procedures for handling products, waste, waste water management, and site investigation/ abatement plans.

(GW-35) - Conoco, Inc., Mr. Lane Ayers, (505)-632-4906, P.O. Box 217 Bloomfield, New Mexico 87413, has submitted a Discharge Plan Renewal Application for their San Juan Gas Plant located in the NW/4 NW/4, Section 14, Township 29 North, Range 11 West, NMPM, San Juan County, New Mexico. Approximately 790,950 gallons per month of waste water is discharged onsite into an above ground bermed closed top tank and two double lined surface evaporation ponds with leak detection prior to transport offsite at an approved OCD disposal facility; Groundwater most likely to be affected by a spill, leak, or accidental discharge to the surface is at a depth of approximately 15 to 55 feet with a total dissolved solids concentration of approximately 4,400 mg/L. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(BW-019) - Key Energy Services, Inc., Royce Crowell, (505) 393-9171, P.O. Box 2040 Hobbs, New Mexico, 88241 has submitted an application for renewal of its previously approved discharge plan for the Carlsbad Brine Station, located in the SE/4 NE/4 of Section 36, Township 22 South, Range 26 East, NMPM, Eddy County, New Mexico. Fresh water is injected to an approximate depth of 710 feet and brine water is extracted with an average total dissolved solids concentration of 300,000 mg/l. Ground water most likely to be affected by any accidental discharge is at a depth exceeding 150 feet and has a total dissolved solids content of approximately 1,800 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

GIVEN under the Seal of New Mexico Oil Conservation Commission at Santa Fe, New Mexico, on this 21st day of August 2001.

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge plan applications has been submitted to the Director of the Oil Conservation Division, 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-032) - GIANT REFINING Company, Ms Dirinda Mancini, (505)-722-3833 Route 3, Box 7, Gallup, New Mexico, 87301 has submitted an application for the previously approved discharge plan for their Ciniza Refinery located in Section 28 and Section 33, Township 15 North, Range 15 West, NMPM, Mckinley County, near Gallup, New Mexico. The total discharge of process and non-process wastewater from the facility is about 160,000 gallons/day with an estimated total dissolved solids concentration with a range of about 2,000 mg/l to 3,000 mg/l. Groundwater most likely to be affected by a spill, leak, or accidental discharge to the surface varies in depth from 70 feet to 140 feet with an approximate total dissolved solids concentration of 950 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge plan applications has been submitted to the Director of the Oil Conservation Division, 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-077) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Middle Mesa Natural Gas Compressor Station located in the SW/4 SW/4 of Section 10, Township 31 North, Range 7 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 150-200 feet with an estimated total dissolved solids concentration of approximately 1400 mg/I. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-239) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Quinn Natural Gas Compressor Station located in the NW/4 SW/4 of Section 16, Township 31 North, Range 8 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1700 mg/I. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-255) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Buena Vista Natural Gas Compressor Station located in the NW/4 NE/4 of Section 13, Township 30 North, Range 9 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 30 feet with an estimated total dissolved solids concentration of approximately 1100 mg/I. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-258) - Burlington Resources, Greg Wurtz, Environmental Representative, P.O. Box 4289, Farmington, New Mexico 87499-4289, has submitted a discharge plan renewal application for their Cedar Hill Natural Gas Compressor Station located in the SW/4 SW/4 of Section 29, Township 32 North, Range 10 West, NMPM, San Juan County, New Mexico. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 250 feet with an estimated total dissolved solids concentration of approximately 1100 mg/I. The discharge plan addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-032) - GIANT REFINING Company, Ms Dirinda Mancini, (505)-722-3833Route 3, Box 7, Gallup, New Mexico, 87301 has submitted a ~~modification~~ application for the previously approved discharge plan for their Ciniza Refinery located in Section 28 and Section 33, Township 15 North, Range 15 West, NMPM, Mckinley County, near Gallup, New Mexico. The total discharge of process and non-process wastewater from the facility is about 160,000 gallons/day with an estimated total dissolved solids concentration with a range of about 2,000 mg/l to 3,000 mg/l. Groundwater most likely to be affected by a spill, leak, or accidental discharge to the surface varies in depth from 70 feet to 140 feet with an approximate total dissolved solids concentration of 950 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-28) - Navajo Re[redacted]ng Company, Darrell Moore, (505)[redacted]-5281, P.O. Box 159, Artesia, New Mexico, 88211-0159 has submitted an application for renewal of its previously approved discharge plan for the Artesia Refinery located in the SE/4 of Section 1, E/2 of Section 8, W/2 of Section 9, N/2 of Section 12, Township 17 South, Range 26 East, NMPM, Eddy County, New Mexico. Approximately 400,000 gallons per day of treated refinery waste water with a total dissolved solids concentration of approximately 2,300 mg/l is discharged from the facility waste water treatment plant by pipeline to two Class I (non-hazardous) deep injection wells located in Sec 31- Ts 17s-R 28 e and Sec 12-Ts 18s-R27e of Eddy County, New Mexico and discharges approximately 150,000 gallons per day of Reverse-Osmosis Reject water used to irrigate two adjacent farms owned and operated by Navajo Refining Company. Ground water most likely to be affected by an accidental discharge in the refinery area is at a depth of approximately 10 feet with a total dissolved solids concentration of approximately 2,500 mg/l, and in the pond area ground water is at a depth of 5 to 10 feet with a total dissolved solids concentration of approximately 6,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed including methods and procedures for handling products, waste, waste water management, and site investigation/ abatement plans.

(GW-014) - Navajo Refining Company, Darrell Moore, (505) 748-5281, P.O. Box 159, Artesia, New Mexico, 88211-0159 has submitted an application for renewal of its previously approved discharge plan for the Lovington Refinery located in the SW/4 of Section 31, Township 16 South, Range 37 East; the SE/4 of Section 36, Township 16 South, Range 36 East; the NW/4 of Section 6, Township 17 South, Range 37 East; and the NE/4 of Section 1, Township 17 South, Range 36 East NMPM, Lea County, New Mexico. Approximately 101,000 gallons per day of treated refinery waste water with a total dissolved solids concentration of approximately 1,300 mg/l will undergo treatment in a USEPA regulated pretreatment unit prior to discharge to the City of Lovington publicly owned treatment works (POTW). Ground water most likely to be affected by an accidental discharge is at a depth of approximately 90 feet with a total dissolved solids concentration of approximately 500 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed including methods and procedures for handling products, waste, waste water management, and site investigation/ abatement plans.

(GW-35) - Conoco, Inc., Mr. Lane Ayers, (505)-632-4906, P.O. Box 217 Bloomfield, New Mexico 87413, has submitted a Discharge Plan Renewal Application for their San Juan Gas Plant located in the NW/4 NW/4, Section 14, Township 29 North, Range 11 West, NMPM, San Juan County, New Mexico. Approximately 790,950 gallons per month of waste water is discharged onsite into an above ground bermed closed top tank and two double lined surface evaporation ponds with leak detection prior to transport offsite at an approved OCD disposal facility; Groundwater most likely to be affected by a spill, leak, or accidental discharge to the surface is at a depth of approximately 15 to 55 feet with a total dissolved solids concentration of approximately 4,400 mg/L. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(BW-019) - Key Energy Services, Inc., Royce Crowell, (505) 393-9171, P.O. Box 2040 Hobbs, New Mexico, 88241 has submitted an application for renewal of its previously approved discharge plan for the Carlsbad Brine Station, located in the SE/4 NE/4 of Section 36, Township 22 South, Range 26 East, NMPM, Eddy County, New Mexico. Fresh water is injected to an approximate depth of 710 feet and brine water is extracted with an average total dissolved solids concentration of 300,000 mg/l. Ground water most likely to be affected by any accidental discharge is at a depth exceeding 150 feet and has a total dissolved solids content of approximately 1,800 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

RE: Groundwater Sampling for GW 032 Permit Renewal

Listed below are the wells we intend to monitor in Spring 2001. In case we have equipment or weather problems, I am going to list them in the order of highest priority through lowest.

Very High – OW -1, OW – 2, OW – 3
OW - 29, OW – 30
OW – 12, OW –13, OW – 14 (for OCD permit)

High - OW – 5, OW –7, OW – 9, OW – 10 DO NOT SAMPLE
OW – 11, MW – 4

Lower - MW –1, MW – 2, MW – 5, SMW – 4

For all wells:

- Sample for the parameters listed in Tables E-1A through E-1D as given in the RCRA Post-Closure Permit, Volume 1, Section E. (Includes Modified Skinner and additional parameters using Methods 8260, 8270, and metals.) Copy attached. (See Note 1).

- Sample for the parameters needed to do a Cation/Anion Balance –
  Anions: Alkalinity (including Bicarb, Carb and Hydroxide Alkalinity), Chloride, Fluoride, Nitrate as N, Sulfate, Phosphate as P, Bromide.
  Cations: Aluminum, Calcium, Potassium, Magnesium, Sodium, Copper, Iron, Manganese, Zinc, Boron.

- On the Chain of Custody, request a calculated Ion Balance.

- Sample and analyze for pH and Conductivity (4 replicate analyses each).

- Sample and analyze for Total Dissolved Solids and Total Suspended Solids.

- Sample and analyze for Total Organic Carbon (TOC) and Total Halides (TOX) (4 replicate analyses each)

For Wells OW – 12, -13, -14, -29, -30

- Sample and analyze for MTBE

Note 1 – Copy to be faxed

RE: Ciniza Refinery Non-Hazardous Waste Disposal

Dear Mr. Beardsley:

Giant Refining Co.'s (GRC) Ciniza Refinery would like to dispose of the following waste at the Red Rocks Landfill:

- **Elemental Sulfur** –This material is produced in the Sulferox Unit, which treats refinery-produced fuel gas to remove sulfur. The material is RCRA Non-hazardous and is listed as ' Subsection D.(1)i ' waste under OCD Rule 712. (19.15.9.712.). We base the non-hazardous determination on the MSDS (enclosed) and knowledge of process.

  Due to the concerns of our transporter and the landfill, we are requesting a letter stating that we have your approval to ship and dispose of this material at the Red Rocks Landfill. By reference to Rule 712, we believe that OCD does not require testing before disposal.

We look forward to hearing from you regarding approval to send this routine, non-hazardous waste to the Red Rocks Landfill. Please do not hesitate to contact me at 505-722-0227. Thank you for your assistance.

Sincerely,

Dorinda Mancini

MATERIAL SAFETY DATA SHEET

SUBSTANCE IDENTIFICATION

Substance: **SulFerox-Produced Sulfur** (as indicated on label)

Date Sheet Prepared: October 22, 1991

NFPA Rating (Scale 0 - 4): Health = 2 Fire = 1 Reactivity = 0

1. **INGREDIENTS:**
(Include CAS Numbers and Typical Percentages)

Sulfur:	80%	CAS # 7704-34-9
Water:	20%	CAS # 7732-18-5
Proprietary Iron Chelate:	1700 ppm	

This document is prepared pursuant to the OSHA Hazard Communication Standard (29 CFR 1910.1200). For information required by other federal laws, see Section 9. In addition, other substances not "hazardous" per this OSHA Standard may be listed. Where a proprietary ingredient shows, the identity may be made available as provided in this standard.

2. **PHYSICAL DATA:**

Boiling Point:	832°F (445°C)
Vapor Pressure:	1 mm Hg @ 184°C
Vapor Density:	Air=1
Solubility in Water:	Insoluble
Specific Gravity:	2.07
Freezing Point:	Optional
Appearance:	Light Yellow Particles
Odor:	Natural Gas, Sulfur

3. **FIRE AND EXPLOSION HAZARD DATA:**

Flash Point: 405°F (207°C)

Flammable Limits: Not Determined

Extinguishing Media: __X__ Water Fog __X__ Foam _____ CO_2
__X__ Dry Chemical _____ Other (Specify)

Fire and Explosion Hazards:

Avoid contact with heat, sparks, flames, or other sources of ignition. Finely divided material is extremely flammable and may burn rapidly with flare-burning effects.

Fire Fighting Equipment:

Self-contained breathing apparatus with full facepiece operated in pressure demand or other positive pressure mode.

4. REACTIVITY DATA:

Stable under normal temperatures and pressures.

Stability: (Conditions to avoid) not available.

Incompatibility: (Specific materials to avoid) not available.

Hazardous Decomposition Products: Thermal decomposition products may include toxic oxides of sulfur.

Hazardous Polymerization:

_____	Not Applicable
__X__	Will Not Occur
_____	Will Occur Under Which Conditions
_____	Under Normal Operating Conditions

5. ENVIRONMENTAL AND DISPOSAL INFORMATION:

Action to take for spills and leaks:

Shut off ignition sources. Do not touch material. Use a clean shovel and place material into a clean, dry container, and cover. No smoking and isolate from flames or flares in hazardous areas. Keep unnecessary personnel away.

DISPOSAL METHOD:

6. HEALTH HAZARD DATA:

Eyes:	Irritant! May cause irritation, inflammation, and pain.
Skin Contact:	Irritant! May cause irritation, redness, and pain. Sensitivity to sulfur when used as a topical agent is rare. May cause dermatitis.
Skin Absorption:	
Ingestion:	175 mg/kg oral in rabbit.
Inhalation:	May inflame nasal mucosa which may lead to hyperplasia.

7. **FIRST AID:**

Eyes:	Wash eyes immediately with large amounts of water or normal saline solution. Occasionally lifting the upper and lower eyelids until no evidence of chemical remains.
Skin:	Remove contaminated clothing and shoes immediately. Wash affected area with soap or mild detergent and large amounts of water until no evidence of chemical remains, approximately 15 to 20 minutes. Get medical attention immediately.
Ingestion:	Treat symptomatically and supportively. Get medical attention immediately. If vomiting occurs, keep head lower than hips to prevent aspiration.
Inhalation:	Remove from exposure area to fresh area to fresh air immediately. If breathing has stopped, perform artificial respiration. Keep person warm and at rest. Treat symptomatically and supportively. Get medical attention.

NOTE TO PHYSICIAN: OPTIONAL

8. **HANDLING PRECAUTIONS:**

Exposure Guideline(s)

Ventilation:	Avoid breathing dusts.
Respiratory Protection:	Use properly ventilated areas.
Skin Protection:	Wear appropriate protective clothing. Avoid skin contact. Wear impervious gloves.
Eye Protection:	Wear splash-proof and dust-proof safety goggles to prevent eye contact with this substance.

9. **SARA 313 INFORMATION:**

This product contains the following substances subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR Part 372.

NON-PROPRIETARY INGREDIENTS:

None.

PROPRIETARY INGREDIENTS (Listed by SARA 313):

None.

Subject: Groundwater Sampling

After checking the WQCC list of standards, Giant will ensure that all required parameters are sampled and analyzed for with our Spring 2001 sampling. There are a few that we had not listed on the Tables E-1A through E-1D.

Wayne and Denny -
Are PCB's and Radioactivity required if there is no reason to believe them to be present in our groundwater?
If we need these parameters, would analyzing a few select (perimeter) wells suffice?

Thanks,
Dorinda

Subject: RE: OCD GW 032 Permit Renewal Application

Dear Ms. Mancini:

Please note GW-032 is due to expire on Aug 01,2001.

WQCC 3106.F. If the holder of an approved discharge plan submits an application for discharge plan renewal at least 120 days before the discharge plan expires, and the discharger is not in violation of the approved discharge plan on the date of it expiration, then the existing approved discharge plan for the same activity shall not expire until the application for renewal has been approved or disapproved. A discharge plan continued under this provision remains fully effective and enforceable. An application for discharge plan renewal must include and adequately address all of the information necessary for evaluation of a new discharge plan. Previously submitted materials may be included by reference provided they are current, readily available to the secretary and sufficiently identified to be retrieved. [12-1-95]

In order to comply with your request please submit a Discharge Plan renewal application with $50.00 filing fee for the above listed facilities before April 01, 2001.

RE: SURVEY PLAT AND DEED NOTIFICATION RECEIPT
REQUEST FOR EXTENSION, REVEGETATION SCHEDULE
LAND TREATMENT UNIT, GIANT REFINING COMPANY
CINIZA REFINERY
PERMIT NUMBER NMD000333211-1

Attention: Ms. Dorinda Mancini:

This letter acknowledges receipt by the New Mexico Environment Department Hazardous Waste Bureau (HWB) of the deed notification and survey plat for the Land Treatment Unit (LTU) at Giant Refining Company's Ciniza Refinery (GRCC) dated November 20, 2000. The submittal satisfies requirements specified in Section III.D.1 of the Resource Conservation and Recovery Act (RCRA) Land Treatment Unit Post-closure Care Permit issued by HWB to GRCC in August 2000. The survey plat and deed notification were submitted to HWB in accordance with the requirements of 20.4.1.500 NMAC incorporating 40 CFR 264.116 and 264.119.

Giant also requested an extension to complete establishment of the final vegetative cover for the LTU as part of their submittal dated November 20, 2000. A vegetative cover for the LTU was to be completed within 90 days of the effective date of the Post-closure Care Permit. The extension was requested because seasonal weather conditions at the facility will inhibit the growth of the vegetative cover. HWB grants an extension to begin establishment of the final vegetative cover for the LTU no later than May 1, 2001.

Subject: Railroad Rack Lagooln and Landfarm Sampling

Wayne,

This is the schedule for sampling and the parameters I believe we agreed upon during our phone conversation last week:

Bill Kingsley of Precision Engineering will be at Ciniza the week of 12/4/00 to do the drilling.
We will sample and analyze the temporary landfarm, 3 feet below the treatment zone of the landfarm, and the lagoon sludge for 8260, 8270, total RCRA metals (8), DRO, GRO, and ORO.

In addition. the sample from 3 feet below the landfarm treatment zone will be analyzed for General Chemistry parameters.

Let me know if this matches your recollection.

Will add to GP. 8/25/00

RE: Giant Refining Company – Ciniza Refinery
Minor Modification of GW – 032
Construction of a Temporary Landfarm to Bioremediate Non-Hazardous Soils Excavated from Solid Waste Management Units (SWMUs) 8 and 11

Dear Mr. Price:

Giant's Ciniza Refinery requests a minor Modification to it's Groundwater Discharge Plan (GW – 032) to construct a temporary landfarm adjacent to the Railroad Rack Lagoon (RRR Lagoon). The landfarm would be located west of the Lagoon and would be ~300 feet by ~70 feet in size. The landfarm is marked in red on the attached map.

This landfarm would be used to bioremediate non-hazardous, hydrocarbon-contaminated soils excavated from the adjacent RRR Lagoon (SWMU 8) and from the Secondary Oil Skimmer (SWMU 11). Approximately 1000 cu. yd. of soil is expected to need treatment. Giant estimates that remediation of all the soils would require 3 to 4 years.

Treatment in the landfarm would consist of adding 6" lifts of contaminated soil to a base of clean soil, plowing, disking and tilling the soil along with addition of a time-release fertilizer (MaxBact) and water as needed. Sampling to monitor the reduction of TPH would be done at least quarterly. When the TPH is at an acceptable level for other, beneficial use on the site, it would be removed and used or stockpiled for future fill needs.

Thank you for your assistance in this matter. If you have any questions regarding this request , please contact me at (505) 722-0227.

Sincerely,

Dorinda Mancini

RE: POST-CLOSURE CARE PERMIT, LAND TREATMENT UNIT
GIANT REFINING COMPANY, CINIZA REFINERY
McKINLEY COUNTY, NEW MEXICO

Dear Ms. Mancini:

This letter provides a tentative schedule for issuing a Resource Conservation and Recovery Act (RCRA) Post-closure Care Permit for the land treatment unit (LTU) at Giant Refining Company's (Giant's) Ciniza Refinery. The LTU is a regulated unit therefore, Giant is required to obtain a permit for post-closure care activities by the State of New Mexico Environment Department (NMED) and the U.S. Environmental Protection Agency (EPA) in compliance with Subtitle C of RCRA, 42 U.S.C. 6901 et seq., the New Mexico Hazardous Waste Act (HWA), NMSA 1978, 74-4-1 et seq. and the New Mexico Hazardous Waste Regulations, 20 NMAC 4.1.

Giant's revised post-closure care permit application was delivered to NMED Hazardous and Radioactive Materials Bureau (HRMB) on March 20, 2000. HRMB determined that further edits were required. The edits were completed and delivered to HRMB by Giant Refining Company's contractor Benchmark Environmental Corporation on March 22, 2000. HRMB anticipates that the final review of the draft permit application will be completed by March 31, 2000. The permit and revised permit application will then be submitted to EPA for review and comment by April 3, 2000. HRMB will incorporate EPA's comments and issue a draft permit for public comment in accordance with 20 NMAC 4.1.901. HRMB anticipates that the 45-day public comment period, required by 20 NMAC 4.1.901, will begin prior to April 30, 2000. Based on the anticipated schedule for review and public comment and the assumption that a public hearing will not be required, the final Post-closure Care Permit for the LTU at Giant Refining Company's Ciniza Refinery could be issued by June 30, 2000.

Please call this office at (505) 827-1561 if you have questions regarding the anticipated schedule for issuance of the post-closure care permit for the subject site listed above.

RE: Extension Request For Comprehensive Facility Investigation Work Plan
Discharge Plan GW - 32

Dear. Mr. Anderson:

Giant Refining's Ciniza Refinery received a request from the Oil Conservation Division (OCD), dated February 16, 1998, for additional information for the Facility Investigation Work Plan. This information is due to the OCD on April 16, 1998.

Due to the required preparation of Ciniza's RCRA Part B Permit renewal application and preparations for the scheduled plant "turn around", Ciniza's Environmental group has been unable to prepare the documents requested. I am requesting a 90 day extension (until July 15, 1998) to submit the additional information to your office.

Thank you for your assistance. If you have questions or comments regarding this request, please contact me at (505) 722-0227.

Sincerely,

Dorinda Mancini

RE: Comprehensive Facility Investigation Work Plan
Ciniza Refinery
Discharge Plan GW-032
McKinley County, New Mexico

Dear Ms. Mancini:

The New Mexico Oil Conservation Division (OCD) has completed a review of the Giant Refining Company (Giant) "Comprehensive Facility Investigation Work Plan" received July 1, 1997. This document contains Giant's plan to plug numerous existing refinery monitor wells and replace them with several boundary wells.

The above referenced work plan does not plan to determine the extent of soil and ground water contamination at the refinery as required by the OCD in a letter to Giant dated February 28, 1997. Pursuant to the OCD letter dated February 28, 1997, please submit a comprehensive facility investigation work plan that will determine the extent of soil and ground water contamination at the refinery. Please refer to Water Quality Control Commission Regulation 4106.C in the preparation of the work plan.

In order for the OCD to properly evaluate the work plan, the OCD also requires that Giant submit the following additional information:

1. A tabular summary of all past and present laboratory analytic results of water quality and remediation system sampling for all monitor and recovery wells.

2. A current water table potentiometric map for the refinery using the water table elevations from all monitor and recovery wells.

3. A current product thickness map for the refinery using product thickness measurements from all monitor and recovery wells.

Please submit the above mentioned work plan to the OCD by April 16, 1998.

If you have any questions, please call me at (505) 827-7155.

Sincerely,

Mark Ashley
Geologist

Re: Using Refinery Waste Water for Road Construction

Dear Mr. Acosta:

I have received your letter dated August 12, 1996, requesting authorization to use up to 500,000 gallons of refinery wastewater from ponds #2, #11, and #12 at Giant Refinery for road construction over a two month period.

You may use this water as proposed with the following conditions:

1. The water will be applied so that no excess water runs off into roadside ditches or into any watercourse.

2. At the end of each day's activity, unused water will be stored in trucks or tanks so the water does not drip or drain onto the ground overnight. Alternatively, the water may be returned to the Giant ponds if no other material has been added to the water intentionally, or accidentally mixed with liquids that were previously contained in the truck or tank.

This approval does not relieve you of liability should your operation result in actual pollution of surface waters, ground waters, or the environment that may be actionable under other laws and/or regulations. In addition, this approval does not relieve you of responsibility for compliance with other county, state, federal, or tribal laws and/or regulations.

Sincerely,

Frank T. Chavez

RE: REQUEST TO USE TREATED PROCESS WATER

Dear Mr. Chavez:

McKinley County has several road construction projects slated in the vicinity within a fifteen mile radius of Giant Refining property. Each project will necessitate different amounts of water usage ranging from a minimum of 30,000 gallons per day to a maximum of 50,000 gallons per day, with a total usage of approximately 180,000 gallons minimum to 500,000 gallons maximum, over a two month period per project.

We are requesting permission to utilize the water from Evaporation Ponds #2, #11, or #12 located at Giant Refining properties for road projects near the location. We will notify Giant Refining Co. prior to the beginning of each project and again notify them when the project is completed. The total usage for most road projects would fall in the category given above. It would be most helpful if we could obtain permission for any upcoming projects that would fall in the above category, requesting new permission only if the usage for a project was projected to fall above the maximum stated above.

Thank you for your assistance and cooperation in this matter.

Sincerely,

David J. Acosta

MEMORANDUM

TO: Mr. Mark Ashley, Petroleum Geologist **DATE**: July 31, 1997

FROM: Patricio W. Sanchez, Petroleum Engineering Specialist

SUBJECT: Comments on the June 30, 1997 "Comprehensive Facility Investigation Work Plan" for discharge plan GW-032.

Mr. Ashley, the comments that follow are the points contained within this proposed work plan that need further clarification from Giant. (Note: I have not received any feed back from Mr. Foust with our Aztec District Office or Dr. Stuart Dinwiddie of the NMED, HRMB.)

Pg. 1 - Facility History and Operations, paragraph number 3.
The most likely cause.....the Sonsela Aquifer.

Comment: Vadose zone above the Sonsela is already contaminated.

Pg. 2 - Previous Soil and Groundwater Investigations, Bullet points two and three.

Comment: When will these be implemented, no specific dates are given.

Pg. 3 - Previous Soil and Groundwater Sites, Bullet point two.

Comment: What specific areas?

Also Giant states " *In 1989, a hydrocarbon....This site is currently undergoing investigation.*"

Comment: At whose direction - i.e. OCD, EPA, or ED?

Pg. 3 - Refinery Contamination Sites

Bullet point number one and number two - "*Groundwater impact Area #1.....remediation is currently in operation.*"

Comment: What about water draws from the tanks? Was not the old practice of draining water out of tank bottoms thought also to be a cause?

Bullet point number 3 and number 4 - "*Groundwater Impact Area #3.....this area is remediating by natural attenuation.*"

Comment: Who approved of these remedial options and how is its effectiveness being monitored? Also, why were the records regarding the leaking tanks not reported to OCD per WQCC 1203 and OCD Rule 116?

Pg. 4 - Investigation and Abatement Work Plan, both bullet points.
Comment: Why wait until the vadose zone contaminates the Sonsela?

Pg. 4 - Investigation and Abatement Work Plan, Sonsela Aquifer, Paragraph no. 1.
"As the uppermost.....monitoring wells in the Sonsela Aquifer must be properly installed."

Comment: Is the hydraulic conductivity sited a vertical or horizontal value- and how was the number arrived at? Also, based on the recent investigation work has the likelihood of other geological pathways to the Sonsela been eliminated? (i.e. localized fracturing/faulting and depositional environment changes and there effects on grain size and localized porosity and conductivity.)

Also, in the last point (2.) regarding the installation of Sonsela monitor wells - should this wells be double cased in construction?

Pg. 5 - Investigation and Abatement Work Plan, Sonsela Aquifer, Point no. 6

Sampling should be quarterly for BTEX and MTBE on the mentioned wells. (MTBE is also highly mobile.) the analysis should be submitted in an annual report. Also, in general Giant needs to review the entire monitoring and sampling required as a part of GW-032 and submit a revision.

Pg. 5 - Investigation and Abatement Work Plan, Sonsela Aquifer, Point no. 7

How will these wells be plugged? Are any of these wells currently contaminated, and if so how will this be addressed?

Pg. 6 - Contamination Sources, bullet no.1 *" Routine surveillance of.....reported to the Refinery Environmental Department."*

Comment: Per WQCC 1203 and OCD Rule 116 Giant needs to notify OCD .

Pg. 6 - Contamination Sources, last sentence of the last paragraph. *"These sites should continue passive remediation by natural attenuation."*

Comment: How will protection of the Sonsela be monitored in this area?

Pg. 7 Professional Engineers Certification.

Since the plan has been certified by two P.E.'s should OCD accept the plan as is and approve under the OCC - i.e. Mr. Bill Wiess is a Professional Engineer. Also, since it has been certified by these two P.E.'s what legal action can the State take against them if the plan has does not work?

LEGAL NOTICE
Santa Fe County
New Mexico

STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION DIVISION

NOTICE IS HEREBY GIVEN that pursuant to New Mexico Water Quality Control Commission Regulations, the following charge plan applications has been submitted to the Director of the Oil Conservation Division, 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-032) - GIANT REFINING Company, Ms Dirinda Mancini, (505) 722-3833 Route 3, Box 7, Gallup, New Mexico, 87301 has submitted an application for the previously approved discharge plan for their Ciniza Refinery located in Section 28 and Section 33, Township 15 North, Range 15 West, NMPM, McKinley County, near Gallup, New Mexico. The total discharge of process and non-process wastewater from the facility is about 160,000 gallons/day with an estimated total dissolved solids concentration with a range of about 2,000 mg/l to 3,000 mg/l. Groundwater most likely to be affected by a spill, leak, or accidental discharge to the surface varies in depth from 70 feet to 140 feet with an approximate total dissolved solids concentration of 950 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan based on information available. If a public hearing is held, the director will approve or disapprove the proposed plan based on information in the plan and information submitted at the hearing.

GIVEN under the Seal of New Mexico Oil Conservation Commission at Santa Fe, New Mexico, on this 21st day of August 2001.

RE: Offsite Waste Approval
Discharge Plan GW-32
NMOCD approved Land farm
Giant Ciniza Refinery

Dear Mr. Horst:

The Santa Fe OCD office has received the letter dated January 11, 1996 titled " REQUEST FOR APPROVAL TO ACCEPT SOLID WASTE ," addressed to Mr. Denny Foust with the OCD Aztec District office. Per the phone conversation with Mr. Patricio Sanchez of my Staff and yourself on The morning of January 23, 1996 - Giant Ciniza has chosen to utilize the form C-138 for wastes that are coming from offsite from Giant Industry owned facilities.

The approval process will proceed as follows for offsite materials to be disposed of at the OCD land farm at the Giant Ciniza Refinery:

1. The Aztec District office will sign the C-138 to allow the movement of the soil to the NMOCD land farm at Giant Ciniza Refinery.

2. The Santa Fe OCD office will sign the C-138 form confirming that the waste may be placed on the NMOCD land farm at Giant Ciniza Refinery.

3. All other wastes generated at the Refinery itself will be certified through the Giant Ciniza Health, Safety, and Environment department with records kept onsite so that the OCD may view them at any time as part of a Discharge plan audit type inspection.

Giant will also evaluate the efficiency of this process from time to time and can request that OCD amend the conditions in (1.) and (2.) above in order to enhance the overall efficiency.

If you have any questions with regards to this matter feel free to contact me at (505)-827-7152 or Patricio Sanchez at (505)-827-7156.

Sincerely,

Roger C. Anderson
Bureau Chief

RE: Approval of Landfarm
Discharge Plan GW-032 Modification
Giant Ciniza Refinery
McKinley County, New Mexico

Dear Mr. Stokes:

The **discharge plan modification GW-032 for the Giant Ciniza Refinery Landfarm** located in Section 28 and Section 33, Township 15 North, Range 15 West, NMPM, McKinley County, New Mexico, **is hereby approved** under the conditions contained in the enclosed attachment. The discharge plan modification consists of the landfarm application and its contents dated April 12, 1995.

The discharge plan modification application was submitted pursuant to Section 3-106 of the New Mexico Water Quality Control Commission Regulations. Please note Sections 3-109.E and 3-109.F which provide for possible future amendments or modifications of the plan. Please be advised that the approval of this plan does not relieve Giant Refining Co. of liability should the operations associated with this facility result in pollution of surface water, ground water, or the environment. In additon, OCD approval does not relieve Giant of responsibility for compliance with any other Federal, State, or Local laws and/or regulations.

Please be advised that all exposed pits, including lined pits and open top tanks (tanks exceeding 16 feet in diameter), shall be screened, netted, or otherwise rendered nonhazardous to wildlife including migratory birds.

Please note that Section 3-104 of the regulations requires that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan." Pursuant to Section 3-107.C you are required to notify the Director of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume.

This modification approval to the existing discharge plan will expire August 14, 1996, and you should submit an application for renewal in ample time before this date.

The discharge plan modification for the Giant Refining Co. Ciniza GW-032 is subject to the WQCC Regulation 3-114 discharge plan modification fee. Every billable facility submitting a discharge plan for modification shall be assessed a fee equal to the filing fee of fifty dollars ($50) plus the flat fee of three-thousand, nine-hundred and ten dollars ($3910) for Refineries filing for modification of existing discharge plans.

The filing fee and flat fee for the approved discharge plan modification has not been received by the OCD. The checks should be submitted to the **NMED - Water Quality Management** through the NMOCD office in Santa Fe, New Mexico.

On behalf of the staff of the Oil Conservation Division, I wish to thank you and your staff for your cooperation during this discharge plan review.

Sincerely,

William J. LeMay
Director

ATTACHMENT TO OCD PERMIT APPROVAL
Giant Refining Co. Ciniza Refinery
(June 14, 1995)

LANDFARM OPERATION

1. All operating procedures where not specified below will be adhered to as outlined in the application as submitted by Mr. John Stokes with Giant Refining dated April 12, 1995.

2. The facility will be fenced and have a sign at the entrance. The sign will be legible from at least 50 feet and will contain the following information: a) name of the facility, b) the permit number GW-032, c) location by section, township and range, and d) emergency phone number.

3. An adequate berm will be constructed and maintained to prevent runoff and runon for that portion of the facility containing contaminated soils.

4. All contaminated soils received at the facility will be spread and disked within 72 hours of receipt.

5. Soils will be spread in six inch lifts or less.

6. Soils will be disked a minimum of once every two weeks to enhance biodegradation of the contaminants.

7. Successive lifts of contaminated soils will not be spread until a laboratory measurement of Total Petroleum Hydrocarbons (TPH) in the previous lift is less than 100 parts per million (ppm), and the sum of all aromatic hydrocarbons (BTEX) is less than 50 ppm, and the benzene concentration is less than 10 ppm. Comprehensive records of laboratory analysis and the sampling locations will be maintained at the facility. Authorization from the OCD will be obtained prior to the spreading of successive lifts and/or removal of the remediated soils.

8. Only oilfield wastes regulated by the OCD which are exempt from RCRA Subtitle C regulations or non-hazardous by characteristic testing will be accepted at the facility. Solids from operations not currently exempt under RCRA Subtitle C or mixed exempt/non-exempt solids will be tested for the appropriate hazardous Characteristics and submitted to OCD for approval prior to acceptance. Comprehensive records of all laboratory analyses and sample locations will be maintained by the Giant Refining Co.

9. Moisture will be added as necessary to enhance biodegradation and to control blowing dust. There will be no ponding, pooling or runoff allowed. Any ponding of precipitation will be removed within seventy-two (72) hours of discovery.

10. Enhanced bio-remediation through the application of microbes (bugs) and/or fertilizers will only be permitted after prior approval from the OCD. Request for the application of microbes must include the location of the area designated for the bioremediation program, composition of additives, and the method, amount and frequency of application.

11. No free liquids or soils with free liquids will be accepted at the facility.

12. Comprehensive records of all materials received at the facility will be maintained at the facility. The records for each load will include: a) the origin, b) date received, c) quantity, d) exempt or non-exempt status and analyses for hazardous constituents if required, and e) exact cell location and any addition of microbes, moisture, fertilizers, etc.

TREATMENT ZONE MONITORING

1. One (1) background sample will be taken from the center portion of the landfarm two (2) feet below the native ground surface. The sample will be analyzed for total petroleum hydrocarbons (TPH), general chemistry, and heavy metals using EPA approved methods.

2. A treatment zone not to exceed three (3) feet beneath the landfarm will be monitored. A minimum of one random soil sample will be taken from each cell, with no cell being larger than five acres, six (6) months after the first contaminated soils are received in the cell and then quarterly thereafter. The sample will be taken at two (2) to three (3) feet below the native ground surface.

3. The soil samples will be analyzed using approved EPA methods for TPH and BTEX quarterly, and general chemistry and heavy metals annually.

4. After obtaining the soil samples the bore holes will be filled with an impermeable material such as bentonite cement.

REPORTING

1. Analytical results from the treatment zone monitoring will be submitted to the OCD Santa Fe Office within thirty (30) days of receipt from the laboratory.

2. The OCD will notified of any break, spill, or any other circumstance that could constitute a hazard or has potential to result in contamination in accordance with OCD Rule 116 and WQCC section 1-203.

CLOSURE

The Giant will notify the OCD upon cessation of operations. Upon cessation of landfarming operations for six (6) consecutive months, the Giant will complete cleanup of constructed facilities and restoration of the facility site within the following six (6) months, unless an extension is granted by the Director of the OCD. When the facility is to be closed no new material will be accepted. Existing soils will be remediated until they meet the OCD standards in effect at the time of closure. The area will then be reseeded with indigenous grasses and allowed to return to its natural state. Closure will be pursuant to all OCD requirements in affect at the time of closure.

RE: Discharge Plan GW- 32
OCD Discharge Plan Approval,
Renewal, & Modifications 8/1/86 through 8/15/96
Giant Ciniza Refinery

Dear Mr. Horst:

Pursuant to our phone conversation this morning (7/15/96) I have copied all OCD approval letters regarding GW-032 in terms of permit Approval, Renewal, and Modification. I have also included a copy of the renewal request letter submitted to OCD from Mr. Lynn Shelton with Giant Refining on August 21, 1995. Listed below are the attached letters of approval from the OCD from August 1, 1986 through today July 15, 1996:

1. August 1, 1986 - Groundwater discharge plan for ciniza refinery (GW-32) Approval letter.
2. November 6, 1986- Monitoring Schedule for ciniza refinery,(GW-32).
3. June 10, 1987 -Discharge Plan (GW-32) Modification.
4. February 28, 1990 - Request for modification to groundwater discharge plan (GW-32).
5. July 19, 1990 - Discharge plan (GW-32) modification - ciniza refinery and travel center McKinley County, New Mexico.
6. August 14, 1991 - Discharge Plan GW-32, Renewal.
7. August 21 , 1992 - Discharge Plan GW-32, Modification.
8. September 21, 1993 - Monitor Well OW-1, Modification.
9. March 15, 1995 - Tank Modification Discharge Plan GW-32.
10. June 14, 1995 - Approval of Landfarm Discharge Plan GW-032 Modification.
11. August 21, 1995 - Discharge Plan GW-32 Renewal Request from Giant Refining.
12. January 24, 1996 - Diesel Tank addition Discharge Plan GW-32 - Modification.

Ed, if you have any questions please feel free to give me a call at (505)-827-7156.
Thanks!

RE: Diesel Tank addition
Discharge Plan GW- 32
Giant Ciniza Refinery

PWS
should be BBL / per
RCA 4/Ed. (2-9-96)

Dear Mr. Pavlich:

The New Mexico Oil Conservation Division (OCD) has received Giant's letter dated January 19,1996 , requesting OCD approval for the addition of a 55,000 ~~gallon~~ diesel storage tank. The request is hereby approved as a minor modification to the approved discharge plan GW-32.

The Application for modification was submitted pursuant to Water Quality Control Commission (WQCC) Regulation 3107.C and is approved pursuant to WQCC Regulation 3109. Please note that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan". Pursuant to Section 3107.C you are required to notify the Director of any facility expansion, production increase or process modification that would result in a significant modification in the discharge of potential ground water contaminants.

Note, that OCD approval does not relieve Giant of liability should operations at Ciniza result in contamination of surface waters, ground waters or the environment which is result of this work plan. In addition, OCD approval does not relieve Giant of responsibility for compliance with any other Federal, State, or local laws and/or regulations.

If you have any questions please feel free to call Patricio Sanchez at (505)-827-7156.

Sincerely,

Roger C. Anderson

Re: Discharge Plan GW-32 Renewal Request
Giant Refining Company - Ciniza Refinery
McKinley County, New Mexico

Dear Mr. Anderson:

Pursuant to the requirements of the Water Quality Control Commission (WQCC) regulations, Giant Refining Company is applying for renewal of Groundwater Discharge Plan GW-32. The application is for Giant's Ciniza refinery, which is located in Section 28 and 33, Township 15 North, Range 15 West, NMPM, McKinley County, New Mexico. The original plan was approved August 1, 1986 and was renewed on August 14, 1991. The current plan will expire on August 1, 1996.

The current plan consists of the original plan (August 1, 1986), subsequent permit modifications (December 12, 1986, March 5, 1987, and June 4, 1987 [1st modification]; February 20, 1990 [2nd modification]; and July 10 and 13, 1990 [3rd modification]), the Discharge Plan renewal (August 14, 1991) and its subsequent modifications (August 21, 1992, September 21, 1993, March 15, 1995, and June 14, 1995). There are no other changes in Giant's discharge status and no changes are anticipated within the time frame of this application and the renewal of Discharge Plan GW-32.

This application for the Groundwater Discharge Plan GW-32 is submitted pursuant to Section 3-106 of the New Mexico Water Quality Control regulations.

If you require additional information, please contact me at (505) 722-077.

Sincerely,

Lynn Shelton

RE: Approval of Landfarm
Discharge Plan GW-032 Modification
Giant Ciniza Refinery
McKinley County, New Mexico

Dear Mr. Stokes:

The **discharge plan modification GW-032 for the Giant Ciniza Refinery Landfarm** located in Section 28 and Section 33, Township 15 North, Range 15 West, NMPM, McKinley County, New Mexico, **is hereby approved** under the conditions contained in the enclosed attachment. The discharge plan modification consists of the landfarm application and its contents dated April 12, 1995.

The discharge plan modification application was submitted pursuant to Section 3-106 of the New Mexico Water Quality Control Commission Regulations. Please note Sections 3-109.E and 3-109.F which provide for possible future amendments or modifications of the plan. Please be advised that the approval of this plan does not relieve Giant Refining Co. of liability should the operations associated with this facility result in pollution of surface water, ground water, or the environment. In additon, OCD approval does not relieve Giant of responsibility for compliance with any other Federal, State, or Local laws and/or regulations.

Please be advised that all exposed pits, including lined pits and open top tanks (tanks exceeding 16 feet in diameter), shall be screened, netted, or otherwise rendered nonhazardous to wildlife including migratory birds.

Please note that Section 3-104 of the regulations requires that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan." Pursuant to Section 3-107.C you are required to notify the Director of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume.

This modification approval to the existing discharge plan will expire August 14, 1996, and you should submit an application for renewal in ample time before this date.

The discharge plan modification for the Giant Refining Co. Ciniza GW-032 is subject to the WQCC Regulation 3-114 discharge plan modification fee. Every billable facility submitting a discharge plan for modification shall be assessed a fee equal to the filing fee of fifty dollars ($50) plus the flat fee of three-thousand, nine-hundred and ten dollars ($3910) for Refineries filing for modification of existing discharge plans.

The filing fee and flat fee for the approved discharge plan modification has not been received by the OCD. The checks should be submitted to the **NMED - Water Quality Management** through the NMOCD office in Santa Fe, New Mexico.

On behalf of the staff of the Oil Conservation Division, I wish to thank you and your staff for your cooperation during this discharge plan review.

Sincerely,

William J. LeMay
Director

ATTACHMENT TO OCD PERMIT APPROVAL
Giant Refining Co. Ciniza Refinery
(June 14, 1995)

LANDFARM OPERATION

1. All operating procedures where not specified below will be adhered to as outlined in the application as submitted by Mr. John Stokes with Giant Refining dated April 12, 1995.

2. The facility will be fenced and have a sign at the entrance. The sign will be legible from at least 50 feet and will contain the following information: a) name of the facility, b) the permit number GW-032, c) location by section, township and range, and d) emergency phone number.

3. An adequate berm will be constructed and maintained to prevent runoff and runon for that portion of the facility containing contaminated soils.

4. All contaminated soils received at the facility will be spread and disked within 72 hours of receipt.

5. Soils will be spread in six inch lifts or less.

6. Soils will be disked a minimum of once every two weeks to enhance biodegradation of the contaminants.

7. Successive lifts of contaminated soils will not be spread until a laboratory measurement of Total Petroleum Hydrocarbons (TPH) in the previous lift is less than 100 parts per million (ppm), and the sum of all aromatic hydrocarbons (BTEX) is less than 50 ppm, and the benzene concentration is less than 10 ppm. Comprehensive records of laboratory analysis and the sampling locations will be maintained at the facility. Authorization from the OCD will be obtained prior to the spreading of successive lifts and/or removal of the remediated soils.

8. Only oilfield wastes regulated by the OCD which are exempt from RCRA Subtitle C regulations or non-hazardous by characteristic testing will be accepted at the facility. Solids from operations not currently exempt under RCRA Subtitle C or mixed exempt/non-exempt solids will be tested for the appropriate hazardous Characteristics and submitted to OCD for approval prior to acceptance. Comprehensive records of all laboratory analyses and sample locations will be maintained by the Giant Refining Co.

9. Moisture will be added as necessary to enhance biodegradation and to control blowing dust. There will be no ponding, pooling or runoff allowed. Any ponding of precipitation will be removed within seventy-two (72) hours of discovery.

10. Enhanced bio-remediation through the application of microbes (bugs) and/or fertilizers will only be permitted after prior approval from the OCD. Request for the application of microbes must include the location of the area designated for the bioremediation program, composition of additives, and the method, amount and frequency of application.

11. No free liquids or soils with free liquids will be accepted at the facility.

12. Comprehensive records of all materials received at the facility will be maintained at the facility. The records for each load will include: a) the origin, b) date received, c) quantity, d) exempt or non-exempt status and analyses for hazardous constituents if required, and e) exact cell location and any addition of microbes, moisture, fertilizers, etc.

TREATMENT ZONE MONITORING

1. One (1) background sample will be taken from the center portion of the landfarm two (2) feet below the native ground surface. The sample will be analyzed for total petroleum hydrocarbons (TPH), general chemistry, and heavy metals using EPA approved methods.

2. A treatment zone not to exceed three (3) feet beneath the landfarm will be monitored. A minimum of one random soil sample will be taken from each cell, with no cell being larger than five acres, six (6) months after the first contaminated soils are received in the cell and then quarterly thereafter. The sample will be taken at two (2) to three (3) feet below the native ground surface.

3. The soil samples will be analyzed using approved EPA methods for TPH and BTEX quarterly, and general chemistry and heavy metals annually.

4. After obtaining the soil samples the bore holes will be filled with an impermeable material such as bentonite cement.

REPORTING

1. Analytical results from the treatment zone monitoring will be submitted to the OCD Santa Fe Office within thirty (30) days of receipt from the laboratory.

2. The OCD will notified of any break, spill, or any other circumstance that could constitute a hazard or has potential to result in contamination in accordance with OCD Rule 116 and WQCC section 1-203.

CLOSURE

The Giant will notify the OCD upon cessation of operations. Upon cessation of landfarming operations for six (6) consecutive months, the Giant will complete cleanup of constructed facilities and restoration of the facility site within the following six (6) months, unless an extension is granted by the Director of the OCD. When the facility is to be closed no new material will be accepted. Existing soils will be remediated until they meet the OCD standards in effect at the time of closure. The area will then be reseeded with indigenous grasses and allowed to return to its natural state. Closure will be pursuant to all OCD requirements in affect at the time of closure.

RE: Tank Modification
Discharge Plan # GW 32
Giant Ciniza Refinery

Dear Mr. Toomer:

The New Mexico Oil Conservation Division (OCD) has received Giant's letter dated February 16, 1995 requesting the replacement of the API oil/water separator with three 5,000 barrel internal floating roof tanks. Your request is considered a minor modification to the above referenced discharge plan and public notice was not issued.

The requested modification is hereby approved with the condition that Giant submit a "closure plan" for the existing API oil/water separator pit.

The Application for modification was submitted pursuant to Water Quality Control Commission (WQCC) Regulation 3-107.C and is approved pursuant to WQCC Regulation 3-109. Please note that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan". Pursuant to Section 3-107.C you are required to notify the Director of any facility expansion, production increase or process modification that would result in a significant modification in the discharge of potential ground water contaminants.

Note, that OCD approval does not relieve Giant of liability should your operation result in actual contamination of surface waters, ground waters or the environment which is result of this work plan. In addition , OCD approval does not relieve Giant of responsibility for compliance with any other Federal, State, or local laws and/or regulations.

If you have any questions please feel free to call Pat Sanchez at (505)-827-7156.

Sincerely,

William J. LeMay
Director

RE: MONITOR WELL OW-1
GIANT CINIZA REFINERY
MCKINLEY COUNTY, NEW MEXICO

Dear Mr. Shelton:

The New Mexico Oil Conservation Division (OCD) has reviewed Giant Refining Company's September 7, 1993 correspondence proposing a modification of the sampling schedule for monitor well OW-1 at the Giant Ciniza Refinery. The proposed modification is a result of recent laboratory analytical results showing low levels of aromatic hydrocarbons in ground water from this monitor well.

The above referenced monitoring proposal **is hereby approved with the following conditions:**

1. Giant will submit the results of the sampling to OCD on a quarterly basis.

2. Giant will submit the proposed assessment of the quarterly sampling to OCD by December 1, 1994.

Please be advised that OCD approval does not relieve Giant of future liability should the contaminants in this well exceed New Mexico Water Quality Control Commission ground water standards or pose a threat to public health or surface waters. In addition, OCD approval does not relieve Giant of responsibility for compliance with any other federal, state or local laws and/or regulations.

If you have any questions, please contact me at (505) 827-5885.

Sincerely,

RE: Discharge Plan GW-32
Ciniza Refinery
McKinley County, New Mexico

Dear Mr. Shelton:

The modification of groundwater discharge plan GW-32 for the Giant Refining Company Ciniza Refinery located in the S/4, Section 28, and the N 3/4, Section 33, Township 15 North, Range 15 West, NMPM, McKinley County, New Mexico **is hereby approved.** The discharge plan modification consists of the discharge plan as renewed on August 14, 1991 and the modification application dated July 24, 1992.

The discharge plan modification was submitted pursuant to Section 3-107.C of the Water Quality Control Commission Regulations. It is approved pursuant to section 3-109.A. Please note Section 3-109.F., which provides for possible future amendment of the plan. Please be advised that approval of this plan does not relieve you of liability should your operation result in actual pollution of surface or ground waters or the environment which may be actionable under other laws and/or regulations.

Please be advised that all exposed pits, including lined pits and open top tanks (tanks exceeding 16 feet in diameter) shall be screened, netted or otherwise rendered nonhazardous to wildlife including migratory birds.

Please note that section 3-104 of the regulations requires that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan". Pursuant to Section 3-107.c. you are required to notify the Director of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume.

Pursuant to Section 3-109.g.4., the renewed plan approval was for a period of five years. The approval will expire August 14, 1996 and modification of a plan during its term does not alter the expiration date.

The discharge plan modification is a minor modification and public notice is not required. Since the modification does not appreciably alter the discharge quality or quantity, the Director has waived the modification fee.

On behalf of the staff of the Oil Conservation Division, I wish to thank you and your staff for your cooperation during this discharge plan modification review.

Sincerely,

William J. LeMay
Director

RE: Discharge Plan GW-32
Ciniza Refinery
McKinley County, New Mexico

Dear Mr. Rosendale:

The groundwater discharge plan renewal (GW-32) for the Giant Refining Company Ciniza Refinery located in the S/4 of Section 28, the N 3/4 of Section 33, Township 15 North, Range 15 West, NMPM, McKinley County, New Mexico is hereby approved. The discharge plan consists of the original plan as approved August 1, 1986, the renewal application dated July 24, 1990 and materials dated August 9, 1991 submitted as a supplement to the application.

The discharge plan was submitted pursuant to Section 3-106 of the New Mexico Water Quality Control Commission Regulations. It is renewed pursuant to Section 3-109.A. Please note Section 3-109.F., which provides for the possible future amendments of the plan. Please be advised that the approval of this plan does not relieve you of liability should your operation result in actual pollution of surface or ground waters or the environment which may be actionable under other laws and/or regulations.

Please be advised that all exposed pits, including lined pits and open top tanks (tanks exceeding 16 feet in diameter), shall be screened, netted, or otherwise rendered nonhazardous to wildlife including migratory birds.

Please note that Section 3-104 of the regulations requires that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan." Pursuant to Section 3-107.C. you are required to notify the Director of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume.

Pursuant to Section 3-109.G.4., this plan approval is for a period of five (5) years. This approval will expire August 1, 1996 and you should submit an application for renewal in ample time before that date. It should be noted that all gas processing plants and oil refineries in excess of twenty-five years of age will be required to submit plans for, or the results of an underground drainage testing program as a requirement for discharge plan renewal.

On behalf of the staff of the Oil Conservation Division, I wish to thank you and your staff for your cooperation during this discharge plan review.

Sincerely,

RE: Discharge Plan (GW-32) Modification - Ciniza Refinery and Travel Center
McKinley County, New Mexico

Dear Mr. Rosendale:

The Oil Conservation Division (OCD) has received your discharge plan modification requests dated July 10, 1990 and July 13, 1990. The proposed modification dated July 10, 1990 is for the installation of a drain sump at the Travel Center and the proposed modification dated July 13, 1990 is for installation of a spray evaporation system at pond #2 at the refinery. The modifications will not alter the volumes of effluent discharged and are hereby approved with the following conditions:

1. Individual sprinklers in the spray system will be oriented to direct the fluid spray so that no direct spray or windblown draft will leave the confines of Pond #2.

2. The spray system will not be operated when wind conditions will allow spray or salt precipitates to drift outside the confines of Pond #2.

The modifications do not appreciably alter the volumes or characteristics of your discharges, therefore public notice was not issued.

Please be aware that approval of these modifications does not relieve you of liability should your operation result in actual pollution of surface or ground waters or the environment actionable under other laws and/or regulations.

If you have any questions, please do not hesitate to contact Roger Anderson at (505) 827-5884.

RE: Request For Modification To Groundwater Discharge Plan (GW-32)

Dear Mr. Rosendale:

The New Mexico Oil Conservation Division (OCD) has reviewed Giant Industries Inc. February 20, 1990 request to modify the August 1, 1986 Groundwater Discharge Plan (GW-32), Ciniza Refinery - Monitoring and Reporting Schedule. OCD approves of Giant Industries Inc. request to conduct monitor well sampling events in the spring and fall at the time of RCRA samplings.

No modified schedule was included for submitting reports containing the monitor well sampling analytical results. Therefore, OCD expects to receive analytical reports within 30 days of analysis receipt verification as required in the August 1, 1989 Groundwater Discharge Plan (GW-32), Ciniza Refinery - Monitoring and Reporting Schedule. In addition, OCD requests that Giant Industries give OCD at least 2 weeks notice prior to monitor well sampling events so that OCD may be given the opportunity to split samples.

If you have any questions, please contact Bill Olson, of my staff, at 827-5885.

Sincerely,

David G. Boyer, Hydrogeologist
Environmental Bureau Chief

RE: Discharge Plan (GW-32) Modification

The modification to previously approved groundwater discharge plan (GW-32) for the Giant Ciniza Refinery located in Sections 28 and 33 of Township 15 North, Range 15 West, NMPM, McKinley County, New Mexico, is hereby approved. The modification consists of the application dated December 12, 1986, and materials dated March 5, 1987 and June 4, 1987, submitted as supplements. The discharge plan (GW-32) was approved August 1, 1986.

The application for modification was submitted pursuant to WQCC Regulation 3-107.C and is approved pursuant to WQCC Regulation 3-109. Please be advised that the approval of this modification does not relieve you of liability should your operation result in actual pollution of surface or ground waters which may be actionable under other laws and/or regulations.

There will be no routine monitoring or reporting requirements other than those mentioned in the plan and modification.

Please note that Section 3-104 of the regulations requires that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan." Pursuant to

Section 3-107.C. you are required to notify the Director of any facility expansion, production increase or process modification that would result in any significant modification in the discharge of water contaminants.

RE: MONITORING SCHEDULE FOR CINIZA REFINERY, GW-32

Dear Mr. McClenahan:

In response to your requests in Giant's letter of October 13, 1986, the following minor changes to the Discharge Plan Monitoring and Reporting Schedule are approved.

1. Flow measurement of API wastewater at the entrance to Pond #1 and outlet from Pond #2. Flow of the neutralization stream will also be measured.

2. MW-Series monitor wells sampled April and October (instead of January and July) for required RCRA constituents.

3. MW-Series monitor wells sampled October, 1986; April, 1987; thence anually beginning October, 1987 for required discharge plan contaminants.

4. Annual January sampling of SMW and required OW wells for required discharge plan contaminants.

A revised Monitoring and Reporting Schedule based on your letter is enclosed. If you have any questions on the revised schedule, please let me know. I can be reached by telephone at 827-5812.

Sincerely,

DAVID G. BOYER

RE: GROUNDWATER DISCHARGE PLAN FOR CINIZA REFINERY (GW-32)

Dear Mr. Shook:

The groundwater discharge plan (GW-32) for Giant Ciniza Refinery located in Sections 28 and 33 of Township 15 North, Range 15 West, (NMPM) McKinley County, New Mexico, is hereby approved. The approved discharge plan consists of the plan dated November 25, 1985, and the materials dated February 3, 1986; April 30, 1986; June 26, 1986; and July 30, 1986, submitted as supplements to the discharge plan.

The discharge plan was submitted pursuant to Section 3-106 of the N.M. Water Quality Control Commission Regulations. It is approved pursuant to Section 3-109. Please note subsections 3-109.E. and 3-109.F., which provide for possible future amendment of the plan. Please be advised that the approval of this Plan does not relieve you of liability should your operation result in actual pollution of surface or groundwaters which may be actionable under other laws and/or regulations.

The monitoring and reporting shall be specified in the discharge plan and supplements thereto. These requirements are summarized on the attached sheet. Any inadvertent omissions from this summary of a discharge plan monitoring or reporting requirement shall not relieve you of responsibility for compliance with that requirement.

Please note that Section 3-104 of the regulations requires that "When a plan has been approved, discharges must be consistent with the terms and conditions of the plan." Pursuant to Section 3-107.C. you are required to notify the director of any facility expansion, production increase, or process modification that would result in any significant modification in the discharge of water contaminants.

Please be aware that in this discharge plan you have made commitments which are legally enforceable under the New Mexico Water Quality Act. These include constructing all aspects of your installation as designed, and

completely fulfilling all monitoring commitments on schedule. You are susceptible to fines should you not fulfill these obligations.

Pursuant to subsection 3-109.G.4., this plan approval is for a period of five (5) years. This approval will expire August 1, 1991, and you should submit an application for new approval in ample time before that date.

On behalf of the staff of the Oil Conservation Division, I wish to thank you, your staff, and consultants for cooperation during this discharge plan review.

Sincerely,

R. L. STAMETS
Director

Attention: Mr. Mitchell Sapp

Gentlemen:

This letter transmits three (3) copies of our final report, "Ground Water and Soils Investigation, Ciniza Refinery, Near Gallup, New Mexico, For Shell Oil Company". This work was performed under Purchase Order No. CR-2149.

The report provides a significant part of the information required to develop a closure plan and post-closure plan for a hazardous waste land treatment facility as prescribed under RCRA.

We have appreciated the opportunity to perform these services for Shell Oil Company. Please contact us if there are any questions.

Yours very truly,

GROUND WATER AND SOILS INVESTIGATION

CINIZA REFINERY

NEAR GALLUP, NEW MEXICO

FOR SHELL OIL COMPANY

1.0 INTRODUCTION

This report presents the results of our investigations at the Ciniza Refinery of Shell Oil Company near Gallup, New Mexico, relative to ground-water conditions in the general vicinity of the plant and soil conditions in the area to be used for treating solid waste. Field work was commenced on October 27, 1980 and completed on January 6, 1981.

2.0 PURPOSE AND SCOPE OF WORK

The purpose of the work described herein was to provide data necessary for compliance with the Interim Status permitting requirements of the Resources Conservation and Recovery Act of 1976 (RCRA), and included the following objectives:

1. To characterize the geohydrologic regime in the plant area and its immediate vicinity.
2. To evaluate the extent of ground-water contamination, if any, at the site and the degree to which it may be attributable to plant operation.

3. To assess the background physical and chemical characteristics of the soils and/or rock material in the area used for land treatment of solid waste.
4. To assist Shell Oil Company in achieving compliance with the RCRA Interim Status Standards.

The scope of work undertaken to fulfill the above objectives comprised essentially Phases I and II of the four-phase program described in our original proposal dated October 2, 1980, and included:

1. The drilling of 17 observation wells.
2. The collection of ground-water samples and measurement of the water table.
3. The excavation of five test pits in the land treatment area.
4. The collection of bulk and in-situ soil samples from the test pits.
5. The laboratory analysis of ground-water and soil samples for selected physical and chemical parameters.
6. Assistance to Shell Oil Company in preparing a description of the land treatment area and a preliminary plan for monitoring and sampling this area during waste disposal activities.
7. Preparation of a report describing the results of these investigations.

3.0 SITE DESCRIPTION

The Ciniza Refinery is located in Sections 28 and 33 of T.15N., R.15W, and in Section 4 of T.14N., R.15W., N.M.P.M. Drainage is north and west toward the South Fork of the Puerco River, a westward-flowing

4.1.2 Ground-Water Investigation

Seventeen observation wells were drilled by percussion methods to investigate the near-surface geology and ground-water hydrology at the site. Permits to drill these wells were issued by the New Mexico State Engineer. Original plans envisioned as many as 20 to 25 wells being drilled. However, fewer wells were found to be necessary to adequately describe the hydrogeologic conditions. The wells ranged in depth from 45 to 163 feet and were drilled either at 8 or 10 inches in diameter. A total of 1,505 feet of drilling was completed. Four-inch diameter PVC casing was installed in each well and included a perforated section at the desired depth interval. Approximately two feet of PVC casing were allowed to extend above ground level and the bottom end of the casing was plugged. The annular space between the PVC casing and the wall of the boring was packed with gravel opposite the perforations and for a distance of several feet above the top of the perforations to allow for settlement. A Quick-Gel bentonite seal was emplaced above the gravel pack for an interval that varied from 5 to 15 feet among the several wells. The bentonite was followed either by sand concrete or by cement grout which extended to the ground surface. Grout emplacement was achieved by using a tremie pipe. Most of the wells which penetrated the sandstone artesian aquifer were inspected by a representative of the State Engineer's office during the grout emplacment.

A protective steel casing 8-5/8 inches in diameter fitted with a locking cap was installed over the above-ground extension of the PVC casing in each well and was cemented in place.

CINIZA REFINERY

Monitoring and Reporting Schedule

The schedule below summarizes the routine monitoring and reporting agreed to be performed by Giant as part of the discharge plan for the Ciniza Refinery (GW-32). While this summary is meant to be inclusive, if any differences occur between the schedule presented here and presented in the discharge plan, the discharge plan (including subsequent correspondence) is the controlling document.

Monitoring	Sampling Parameters	Reporting Frequency	Discharge Plan Reference
API separator effluent quarterly at the two Weir locations for four consecutive quarters, thence bi-annually coincidentally with high-flow periods. Neutralization stream measured on same schedule.	Flow rate of discharge	Quarterly reports during first year on same schedule as RCRA results to NMEID; annual thereafter with submittal to OCD within 30 days of receipt and verification.	Giant's response to OCD comments, p. 11, dated 2/3/8 p. 2, Giant's letter date 4/30/86; p. 4, Giant's le dated 6/26/86
Aerated lagoon inpu[illegible] for four quarters, thence annually.	BOD	Same as above	p. 2, Giant's letter date 4/30/86; and p. 4, Giant' letter dated 6/26/86
Evaporation ponds inspected monthly for freeboard, fluid levels, and seepage. Inspection also after 10-year precipitation event (1.8"/24 hrs.) as measured at refinery.	None	None. Refinery records kept on monthly inspections, and on precipitation events exceeding 1.8" per 24 hrs.	p. 3, Giant's letter date 4/30/86; and p. 4, Giant' letter dated 6/26/86
MW-Series monitor wells sampled January and July, as per RCRA. SMW-Series sampled for four consecutive quarters, thence January and July, as per RCRA.	All approved RCRA (including contuctivity , TOC, TOX, and pH)	Copies of RCRA MW and SMW results sent to OCD on same as to NMEID.	Giant's response to OCD comments, p. 11, dated 2/3/86; p. 3, Giant's letter dated 4/3/86
MW-Series monitor wells July, 1986 and January 1987, thence annually at time of RCRA sampling.	sodium, potassium, calcium, magnesium, chloride, sulfate, carbonate-bicarbonate, TDS, pH, and conductance	Submit 1986 results with January 1987 results by March 1, 1987. Thereafter annual results submitted within 30 days of analysis receipt verification.	Giant's response to OCD comments, p. 11, dated 2/3/86; p. 3, Giant's letter dated 4/3/86; p. 4, Giant's letter dated 6/26/86
SMW-Series monitor wells April and July, 1986, January, 1987, thence annually at time of RCRA sampling	sodium, potassium, calcium, magnesium, chloride, sulfate, carbonate-bicarbonate, TDS, pH, conductance, and volatile aromatic hydrocarbons (BTX)	Same as immediately above	Same as immediately above
Monitor Wells OW1, OW2 and OW3, sampled annually	Same as immediately above	Submitted within 30 days of analysis receipt and verification	p. 3, Giant's letter dated 4/3/86; p. 4 Giant's letter dated 6/26/86

Re: Annual Groundwater Sampling Event

Dear Mr. Horst:

Pursuant to Attachment G, Part 2.B.ii., of the Part B Permit, Giant Refining Company intends to conduct its Annual Groundwater Sampling event on April 13 to April 15, 1992 at its Ciniza Refinery. The schedule for purging and sampling is:

April 13, 1992	8:00 - 12:00	API Effluent,* Aerated Lagoon Effluent*
	12:30 - 4:30	Purge OW-1*, OW-2*, OW-3*' OW-11, MW-1, MW-2, MW-4, MW-5
April 14, 1992	8:00 - 12:00	Sample OW-1, OW-2, OW-3, OW-11, MW-1, MW-2, MW-4, MW-5
April 14, 1992	12:30 - 4:30	Purge SMW-1, SMW-2, SMW-3, SMW-4, SMW-5, SMW-6
April 15, 1992	8:00 - 12:00	Sample SMW-1, SMW-2, SMW-3 SMW-4, SMW-5, SMW-6

*For OCD

Parameters for each sampling point are included in the attached lists.

If you require any additional information, please contact me at (505) 722-0227.

Sincerely,

Lynn Shelton
