# 1999 ANNUAL GROUNDWATER REMEDIATION REPORT JAL NO. 4 PLANT LEA COUNTY, NEW MEXICO

---

## 1.0 INTRODUCTION

Roberts/Schornick & Associates, Inc. (RSA) has been retained by El Paso Energy Corporation (EPEC) to compile the 1999 Annual Groundwater Remediation Report for the Jal No. 4 Plant (Plant) located in Lea County, New Mexico. The remedial activities conducted at the Plant have been performed under EPEC's Project Work Plan, dated February 1995. This plan was approved by the New Mexico Oil Conservation Division (OCD) on April 27, 1995, with subsequent revisions approved on August 10, 1995 and July 8, 1997.

The Plant was constructed by an EPEC entity (El Paso Natural Gas Company) in 1952 to treat, compress and transport natural gas to EPEC's main transmission lines. Currently, the Plant is owned and operated by Christie Gas Corporation. The Plant property is comprised of approximately 181 acres of land located west of State Highway 18 approximately 9 miles north of the town of Jal, New Mexico. The location of the Plant property and topographic features are shown on Figure 1. As is shown, the Plant property occupies portions of Sections 31 and 32 of Township 23 South, Range 37 East, and Sections 5 and 6 of Township 24 South, Range 37 East, all in Lea County, New Mexico.

## 1.1 Program Wells and Sampling Schedule

To assess brine and hydrocarbon impacts to a shallow groundwater system in the Plant area, EPEC has now installed 18 monitor wells, 1 piezometer, and 2 recovery wells on Plant property and adjoining properties to the east (located hydraulically downgradient). Of these wells, EPEC has designated fourteen (14) monitor wells as "***program monitor wells***" that are frequently sampled and analyzed for mineral composition, organic compounds, and metal analytes. The locations of these program monitor wells are shown on Figures 2 through 7.

# 1999 ANNUAL GROUNDWATER REMEDIATION REPORT

El Paso Energy Corporation - Jal No. 4 Plant

February 14, 2000

It should be noted that EPEC installed one (1) additional downgradient monitor well, ACW-17, in the southeast corner of the study area in October 1999. A "Summary of Field Activities", prepared by Highlander Environmental Corp., is presented in Appendix A that describes the installation of this monitor well. Monitor wells ACW-15 and ACW-16 have now been designated as recovery wells RW-1 and RW-2, respectively.

A list of EPEC's program monitor wells and the sample collection schedule for each well is as follows:

Monitor Well	Sampled Quarterly	Sampled Annually
ACW-1		x
ACW-2A		x
ACW-4		x
ACW-5		x
ACW-6		x
ACW-7		x
ACW-8		x
ACW-9		x
ACW-10		x
ACW-11		x
ACW-12	x	x
ACW-13	x	x
ACW-14	x	x
ACW-17	x	x

Quarterly groundwater samples collected from these wells during the 1999 monitoring program were submitted to the laboratory for the following analyses: benzene, toluene, ethylbenzene, and total xylenes (collectively referred to as BTEX), total dissolved solids (TDS), and the major cations and anions (including boron, bromide, calcium, chloride, copper, fluoride, iron, magnesium, manganese, nitrate, potassium, silica, sodium, sulfate, zinc and alkalinity).

# 1999 ANNUAL GROUNDWATER REMEDIATION REPORT

El Paso Energy Corporation - Jal No. 4 Plant

February 14, 2000

Annual groundwater samples collected from these wells during the 1999 monitoring program were submitted to the laboratory for the following analyses: BTEX, TDS, and the major cations and anions (including boron, bromide, calcium, chloride, copper, fluoride, iron, magnesium, manganese, nitrate, potassium, silica, sodium, sulfate, zinc, and alkalinity).

## **1.2 Non-Program Wells and Sampling Schedule**

In addition to these program monitor wells, EPEC also collects groundwater samples from three (3) monitor wells (ENSR-1, ENSR-2 and ENSR-3) one (1) piezometer (PTP-1), one (1) upgradient water supply well (EPNG-1), and two (2) downgradient active water supply wells (Oxy Production Well and Doom Production Well). The ENSR monitor wells are located within the Plant process areas as shown on Figures 2 through 7. Water supply well EPNG-1 is located at the northwest corner of the Plant property. The Oxy Production Well is located approximately in the center of Section 5-T24S-R37E and provides potable water to Oxy's Myers Langlie Mattix Unit Water Injection Station. The locations of the Oxy injection station and supply well are shown on Figures 2 through 7. The Doom Production Well is a private water supply well that provides water to the residence of Jimmie J. and Rebecca J. Doom, and is located in the approximate center of the southeast quarter of Section 5-T24S-R37E. The location of the Doom Production Well is not shown on the Figures provided, however, the well is approximately 2,500 feet southeast of the Oxy water injection station.

To date, EPEC has collected groundwater samples from these non-program wells at least annually. With the exception of the Doom Production Well, the groundwater samples taken from these non-program wells are being submitted to the laboratory for the following analyses: BTEX, TDS, specific conductance, and chloride. The samples taken from the Doom Production Well are being submitted to the laboratory for the following analyses: BTEX, TDS, specific conductance, pH, and the major cations and anions (including boron, bromide, calcium, chloride, copper, fluoride, iron, magnesium, manganese, nitrate, potassium, silica, sodium, sulfate, zinc, and alkalinity).

## **1.3 Depth to Groundwater Measurements**

During each groundwater sampling event, and prior to disturbing the water columns within each well, EPEC personnel measured the static depths to groundwater within the well casings using an electronic water level indicator. All depths to groundwater were measured relative to the surveyed top of casing (TOC) datums so that groundwater

# 1999 ANNUAL GROUNDWATER REMEDIATION REPORT

El Paso Energy Corporation - Jal No. 4 Plant

February 14, 2000

elevations could be determined. Table 1 provides a summary of the depths to groundwater, TOC elevations, and groundwater elevations that have been compiled throughout EPEC's monitoring program.

## 1.4 Sampling Procedures

The groundwater samples were collected by EPEC personnel in accordance with EPA methods and quality assurance/quality control. All monitor wells were purged thoroughly prior to sample collection using electric submersible pumps. Groundwater produced during purging operations was contained and disposed of properly within the Plant's lined surface impoundments.

Samples were collected in laboratory-prepared containers, labeled as to source, packed in ice, and placed under chain-of-custody control for transfer to the laboratory. Samples collected during each of the 1999 sampling events were submitted to NEL Laboratories, Inc. (Las Vegas, Nevada). The results of the 1999 groundwater analyses and all previous analyses are summarized on Table 2. The complete 1999 laboratory analytical reports and chain-of-custody documents are provided in Appendix B.

It should be noted that the groundwater samples taken from monitor well ACW-14 throughout the 1999 sampling events were inadvertently labeled and submitted to the laboratories as "ACW-15". RSA has corrected this error on the data summary tables and figures provided herein, however, the laboratory analytical reports and chain-of-custody documents were not changed.

# 1999 ANNUAL GROUNDWATER REMEDIATION REPORT

El Paso Energy Corporation - Jal No. 4 Plant

February 14, 2000

## **2.0 RESULTS OF MONITORING ACTIVITIES**

The following sections summarize the field measurements and laboratory analytical results obtained throughout the 1999 groundwater sampling program. These data, where appropriate, are compared with historic data to assess any trends that may be apparent. Thirty-nine (39) trend graphs have been prepared that show the TDS, chloride/sodium, and benzene concentrations that have been detected within the groundwater samples taken from the thirteen (13) previously existing program monitor wells (i.e., no graph was prepared for the newly installed monitor well ACW-17). These graphs are presented in the section tabbed "Graphs".

### **2.1 Field Measurements**

Depth to groundwater measurements that have been taken during the sampling events are shown on Table 1. These data indicate that the depths to groundwater across the Site are approximately 100 feet below ground surface, and that the saturated thickness of the groundwater system exhibits little variability. In fact, the fluctuations in the groundwater elevations observed in most wells have been less than one (1) foot since monitoring began in 1997.

Groundwater potentiometric surface maps have been prepared from these data for each sampling quarter. These maps are presented on Figures 2 through 5. As is shown on these figures, the groundwater flow direction across the Site is from northwest to southeast (S46E). The hydraulic gradient across the Site is approximately 0.002 feet per foot. Both groundwater flow direction and hydraulic gradient appear to have changed little since 1997.

### **2.2 Inorganic Constituents**

The primary inorganic parameters that are being used to assess plume migration at the Site include: TDS, chloride and sodium. RSA has reviewed the concentration trend graphs for these parameters in each of the program monitor wells. It is RSA's opinion, based upon our review, that certain trends are apparent in the levels of these parameters. The following table summarizes RSA's opinions of the trends that are observable from the inorganic database provided herein.

# 1999 ANNUAL GROUNDWATER REMEDIATION REPORT

El Paso Energy Corporation - Jal No. 4 Plant

February 14, 2000

MONITOR WELL	CONCENTRATION TRENDS		
	TDS	CHLORIDE	SODIUM
ACW-1	▲	▲	●
ACW-2A	▼	▼	●
ACW-4	▼	●	▲
ACW-5	▼	▼	●
ACW-6	●	●	●
ACW-7	●	▲	▲
ACW-8	▼	▼	●
ACW-9	●	●	●
ACW-10	▲	●	●
ACW-11	●	▲	▲
ACW-12	▲	▲	▲
ACW-13	▼	●	●
ACW-14	●	●	●

Key: ● denotes no observable trend, ▼ denotes a decreasing trend, ▲ denotes an increasing trend

In general, these trends indicate that the levels of inorganic constituents are stable in nine (9) wells, and are increasing slightly in four (4) wells (including monitor wells ACW-01, ACW-7, ACW-11 and ACW-12).

On Figure 6, RSA has prepared an isopleth of the chloride concentrations detected in groundwater during the 1999 sampling program. On this isopleth, the value posted at each well location represents the highest chloride concentration detected in any groundwater sample taken from that well during the 1999 monitoring program.

## 2.3 Organic Constituents

The primary inorganic constituent that is being used to assess plume migration at the Site is benzene. RSA has reviewed the concentration trend graphs for benzene concentrations in each of the program monitor wells. It is RSA's opinion, based upon our review, that

# 1999 ANNUAL GROUNDWATER REMEDIATION REPORT

El Paso Energy Corporation - Jal No. 4 Plant

February 14, 2000

certain trends are apparent in the levels of this compound. The following table summarizes RSA's opinions of the trends that are observable from the benzene database provided herein.

MONITOR WELL	BENZENE CONCENTRATION TREND
ACW-1	▲
ACW-2A	▼
ACW-4	▲
ACW-5	▼
ACW-6	▲
ACW-7	●
ACW-8	▼
ACW-9	●
ACW-10	▼
ACW-11	▲
ACW-12	▲
ACW-13	●
ACW-14	●

Key: ● denotes no observable trend, ▼ denotes a decreasing trend, ▲ denotes an increasing trend

In general, these trends indicate that benzene levels are remaining constant or may be increasing slightly across the Site. Of particular interest are the slightly increasing benzene trends indicated in wells ACW-1, ACW-4 and ACW-11, located along the eastern Plant property boundary, and in leading-edge wells ACW-6 and ACW-12.

On Figure 7, RSA has prepared an isopleth of the benzene concentrations detected in groundwater during the 1999 sampling program. On this isopleth, the value posted at each well location represents the highest benzene concentration detected in any groundwater sample taken from that well during the 1999 monitoring program.

## 1999 ANNUAL GROUNDWATER REMEDIATION REPORT

El Paso Energy Corporation - Jal No. 4 Plant

February 14, 2000

### 3.0 GROUNDWATER REMEDIATION SYSTEM

To date, EPEC has installed two (2) groundwater recovery wells to mitigate impacts to the shallow groundwater system. These wells are identified as RW-1 and RW-2, and the locations of these wells are shown on Figures 2 through 7. As is shown on these figures, RW-1 is located on Plant property in an area that has likely been a source for brines and hydrocarbons. RW-2 is located downgradient approximately 780 feet east of the Plant property boundary. EPEC has also installed a below-grade pipeline that connects recovery wells RW-1 and RW-2 to a Class II water injection well located immediately north of the Plant in the northwest quarter of the southwest quarter of Section 32-T23S-R37E. This injection well is currently owned by Christie Gas Corporation. During 1999, EPEC entered into an agreement with Christie Gas Corporation providing EPEC access to dispose of groundwater within a Class II disposal owned by Christie Gas Corporation located immediately north of the Jal No. 4 Plant.

Electrical power was established at recovery well RW-1 during 1998, and at recovery well RW-2 in 1999. EPEC is currently contracted with Southwestern Public Service Company (Hobbs, New Mexico) to provide electrical power to the groundwater recovery system. Groundwater recovery began from recovery well RW-1 in October 1999, and from RW-2 in January 2000. Table 3 provides a summary of the volumes of groundwater pumped from each of the recovery wells during 1999 and January 2000. During 1999, recoveries from RW-1 totaled 319,280 gallons, averaging 106,426 gallons per month. During January 2000, the initial recoveries from RW-2 totaled 159,650 gallons. These initial recovery data indicate that the monthly recovery volumes from the system will be approximately 266,000 gallons.

**4.0 CONCLUSIONS**

Based upon RSA's review of the data presented herein, the following conclusions are presented:

- The uppermost occurrence of groundwater in the Site area occurs within a shallow groundwater system with saturations occurring at approximately 100 feet below ground surface.
- The saturated thickness of the shallow groundwater system is locally very stable fluctuating less than 1-foot over the last three (3) years.
- Groundwater flow directions at the Site within the shallow groundwater system appear quite stable with flows occurring from northwest to southeast (S46E) and a hydraulic gradient of approximately 0.002 feet per foot.
- The shallow groundwater system in the area has been impacted by chloride. These data indicate that a plume containing elevated levels of chloride has migrated downgradient from the Plant area.
- In general, chloride concentrations in groundwater appear to be increasing slightly along the eastern property boundary of the Plant, and along a line between RW-1 and the newly installed monitor well ACW-17.
- The shallow groundwater system in the area has also been impacted by benzene. These data indicate that a plume containing levels of benzene has migrated downgradient from the Plant area.
- In general, benzene concentrations in groundwater appear to be remaining constant or may be increasing slightly along the eastern property boundary of the Plant. The analytical data from the last sampling event in 1999 indicate that the newly installed monitor well ACW-17 is located in close proximity of the leading edge of the benzene plume.

## **1999 ANNUAL GROUNDWATER REMEDIATION REPORT**

**El Paso Energy Corporation - Jal No. 4 Plant**

**February 14, 2000**

### **5.0 RECOMMENDATIONS**

RSA recommends that the groundwater remediation system continue to be operated at its maximum design capacity. In addition to the quarterly groundwater monitoring activities described above, each recovery well should be routinely monitored to identify groundwater recovery volumes, pumping rates, pumping times, and the quality of groundwater being discharged (via field measurements of specific conductance and chloride concentrations). Concurrent depth to groundwater measurements should also be taken periodically within both the recovery and monitoring wells during periods of prolonged pumping to assess the cones of depression created by groundwater removal. When an adequate volume of dynamic head data are accumulated for the groundwater system, EPEC should conduct a capture zone analysis to assess the effects of the current recovery well configuration.

**MONITOR WELL ACW-17**

# *Highlander Environmental Corp.*

*Midland, Texas*

Mr. Gerry Garibay  
El Paso Energy  
1001 Louisiana St.  
Rm. W-520-A  
Houston, Texas 77002

***RE: Summary of Field activities, Monitor Well ACW-17  
Jal #4 Gas Plant  
Lea County, New Mexico***

Drilling of Monitor Well, ACW-17, commenced at 12:05 PM on October 19, 1999 and was completed at 5:30 PM on October 20, 1999. Scarborough Drilling of LaMesa, Texas, was contracted to drill Monitor Well ACW-17 at the Jal #4 Gas Plant. The well boring was located and staked by El Paso Energy personnel. The drilling rig was cleaned and decontaminated prior to moving in on location.

All drilling activities conformed to state and local regulations and were supervised by Mike Jacobs, Hydrogeologist with Highlander Environmental Corp. A log of drilling activities was kept in a bound field notebook. Information in the logbook includes location, time on site, personnel and equipment present, materials used, and any other observations or information that would be necessary to reconstruct field activities at a later date. The total depth of the borehole is 174 feet below ground surface. The Triassic Chinle Formation was encountered at approximately 169 feet below ground surface. Enclosed is the well log for ACW-17 showing the borehole lithology and well construction diagram.

Drilling fluids consisted of fresh water and/or mud. Water for drilling was acquired from a non-contaminated water supply well at the Jal #4 Plant. Drilling mud consisted of 100 percent sodium bentonite.

All of the casing was new, unused, 4-inch polyvinyl chloride (PVC) conforming to the ASTM Standard F-480-88A. The casing was straight and plumb within the tolerance stated for the borehole. The casing is set from a depth of 150 feet below ground surface to approximately 2 feet above ground.

All requirements that applied to casing also applied to well screen, except for strength requirements. The screens were factory slotted and sized (.01 slot) to prevent 90 percent of the filter pack from entering the well. The screened interval is from 150 feet to 170 feet below ground surface. The bottom of the screen was capped, and the cap shall was joined to the screen by threads.

The annular space was filled with a filter pack, a bentonite seal, and casing grout (to surface) between the well string and the borehole wall. Drilling fluids were thinned with potable water before the annular space was filled. The drilling fluids were removed by vacuum truck. As the annular space was being filled, the well string was centered and suspended such that it did not rest on the bottom of the hole.

The filter pack consisted of clean, inert, and well-rounded silica sand and extended from the bottom of the hole to at least three feet above the top of the well screen (147 feet below ground surface). The top of the sand pack was sounded to verify its depth during placement.

The bentonite consisted of four feet of bentonite between the filter pack and the casing grout; the bentonite was hydrated before placement. 100 percent sodium bentonite was used. The casing grout extended from the top of the bentonite seal (143 feet below ground surface) to ground surface.

An above-ground surface completion was used extending the well casing approximately two feet above land surface. A casing cap was provided for the well, and a protective steel sleeve was placed over the casing and cap and seated in a 3-foot by 3-foot by 4-inch concrete pad.

Highlander appreciates the opportunity to work for you on this project and looks forward to the next phase of the project. I am currently reviewing the data and am preparing a set of recommendations and proposals to complete the remediation efforts at the Jal #4 Gas Plant. Please call me at (915) 682-4559 if you have questions.

Sincerely,  
*Highlander Environmental Corp.*

Mike Jacobs  
Project Manager/Hydrogeologist

PROJECT NAME: NEL ORDER ID: P9902069  
PROJECT #:

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 2/25/99.

Samples were analyzed as received.

Where applicable we have included the following quality control data:

Method blank - used to demonstrate absence of contamination or interferences in the analytical process.

Laboratory Control Spike (LCS) - used to demonstrate laboratory ability to perform the method within specifications by spiking representative analytes into a clean matrix.

Surrogates - compounds added to each sample to ensure that the method requirements are met for each individual sample.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

For TDS analysis samples S99-0080 and S99-0087 were originally analyzed within holding times, but the analytical results did not meet QC requirements. The second analysis passed QC requirements, but was performed beyond holding time.

Some results have been flagged as follows:

Ha - Sample was analyzed beyond hold time for this parameter.

Hr - Sample received beyond holding time for this parameter.

RL - Reporting limit raised due to sample matrix interference.

Eileen M. Ferguson  
Eileen M. Ferguson  
Laboratory Manager

PROJECT NAME:  
PROJECT #:

NEL ORDER ID: P9902070

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 2/25/99.

Samples were analyzed as received.

Where applicable we have included the following quality control data:

Method blank - used to demonstrate absence of contamination or interferences in the analytical process.

Laboratory Control Spike (LCS) - used to demonstrate laboratory ability to perform the method within specifications by spiking representative analytes into a clean matrix.

Surrogates - compounds added to each sample to ensure that the method requirements are met for each individual sample.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

Some results have been flagged as follows:

Hr - Sample received beyond holding time for this parameter.

Jl - The batch MS and/or MSD were outside acceptance limits. The LCS was acceptable.

Some QA results have been flagged as follows:

Jl - The batch MS and/or MSD were outside acceptance limits. The LCS was acceptable.

PROJECT NAME: NEL ORDER ID: P9905043  
PROJECT #:

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 5/14/99.

Samples were analyzed as received.

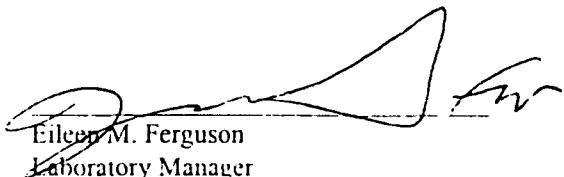

Where applicable we have included the following quality control data:

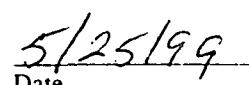

Method blank - used to demonstrate absence of contamination or interferences in the analytical process.

Laboratory Control Spike (LCS) - used to demonstrate laboratory ability to perform the method within specifications by spiking representative analytes into a clean matrix.

Surrogates - compounds added to each sample to ensure that the method requirements are met for each individual sample.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

  
Eileen M. Ferguson

Attached are the analytical results for samples in support of the above referenced project.

Samples were received by NEL in good condition, under chain of custody on 5/14/99.

Samples were analyzed as received.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

PROJECT NAME:  
PROJECT #:

NEL ORDER ID: P9905049

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 5/14/99.

Samples were analyzed as received.

Where applicable we have included the following quality control data:

Method blank - used to demonstrate absence of contamination or interferences in the analytical process.

Laboratory Control Spike (LCS) - used to demonstrate laboratory ability to perform the method within specifications by spiking representative analytes into a clean matrix.

Surrogates - compounds added to each sample to ensure that the method requirements are met for each individual sample.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

The end of run CCV for pH failed QC limits by 0.02 pH units. Since the samples were received outside hold time, this error is not significant, and the samples were not reanalyzed.

Some results have been flagged as follows:

Hr - Sample received beyond holding time for this parameter.

PROJECT NAME: NEL ORDER ID: P9905050  
PROJECT #:

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 5/15/99.

Samples were analyzed as received.

Where applicable we have included the following quality control data:

Method blank - used to demonstrate absence of contamination or interferences in the analytical process.

Laboratory Control Spike (LCS) - used to demonstrate laboratory ability to perform the method within specifications by spiking representative analytes into a clean matrix.

Surrogates - compounds added to each sample to ensure that the method requirements are met for each individual sample.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

The end of run CCV for pH failed QC limits by 0.02 pH units. Since the samples were received outside hold time, this error is not significant.

Some results have been flagged as follows:

Hr - Sample received beyond holding time for this parameter.

Some QA results have been flagged as follows:

J1 - The batch MS and/or MSD were outside acceptance limits. The LCS was acceptable.

Attached are the analytical results for samples in support of the above referenced project.

Samples were received by NEL in good condition, under chain of custody on 5/15/99.

Samples were analyzed as received.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

PROJECT NAME: NEL ORDER ID: P9908050  
PROJECT #:

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 8/13/99.

Samples were analyzed as received.

Where applicable we have included the following quality control data:

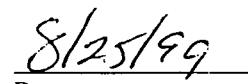

Method blank - used to demonstrate absence of contamination or interferences in the analytical process.

Laboratory Control Spike (LCS) - used to demonstrate laboratory ability to perform the method within specifications by spiking representative analytes into a clean matrix.

Surrogates - compounds added to each sample to ensure that the method requirements are met for each individual sample.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

  
Eileen M. Ferguson

PROJECT NAME:  
PROJECT #:

NEL ORDER ID: P9908049

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 8/13/99.

Samples were analyzed as received.

Where applicable we have included the following quality control data:

Method blank - used to demonstrate absence of contamination or interferences in the analytical process.

Laboratory Control Spike (LCS) - used to demonstrate laboratory ability to perform the method within specifications by spiking representative analytes into a clean matrix.

Surrogates - compounds added to each sample to ensure that the method requirements are met for each individual sample.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

PROJECT NAME: JAL#4 Monitor Wells  
PROJECT NUMBER: NA

NEL ORDER ID: P9910092

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/22/99.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

**Some results have been flagged as follows:**

P - Sample was received with a pH greater than 2.

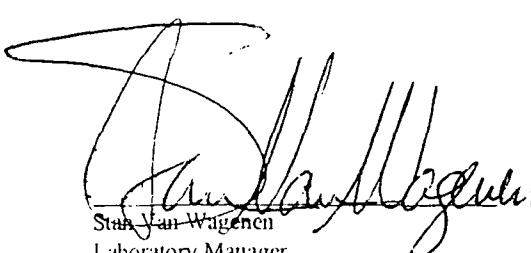

**Some QA results have been flagged as follows:**

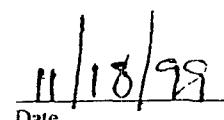

C - Sample concentration is at least 5 times greater than spike contribution. Spike recovery criteria do not apply.

JL - The batch MS and/or MSD were outside acceptance limits. The batch LCS was acceptable.

**Some surrogate results have been flagged as follows:**

Sf - This surrogate was outside acceptance limits.

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/22/99.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

Some results have been flagged as follows:

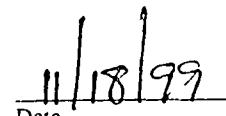

P - Sample was received with a pH greater than 2.

RL - Reporting limit raised due to sample matrix interference.

Some QA results have been flagged as follows:

C - Sample concentration is at least 5 times greater than spike contribution. Spike recovery criteria do not apply.

El Paso, TX 79904  
ATTN: Darrell Campbell

PROJECT NAME: JAL #4  
PROJECT NUMBER: NA

NEL ORDER ID: P9910089

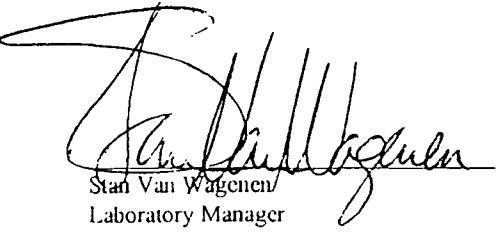

Attached are the analytical results for samples in support of the above referenced project.

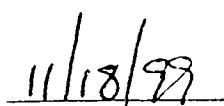

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/22/99.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

Some QA results have been flagged as follows:

- C - Sample concentration is at least 5 times greater than spike contribution. Spike recovery criteria do not apply.

  
Stan Van Wagenen

ATTN: Darrell Campbell

PROJECT NAME: JAL #4  
PROJECT NUMBER: NA

NEL ORDER ID: P9910094

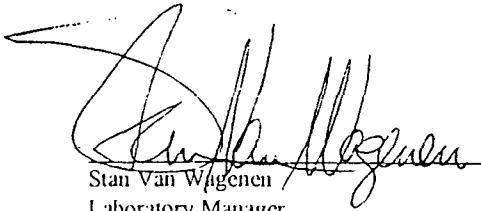

Attached are the analytical results for samples in support of the above referenced project.

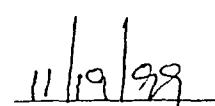

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/23/99.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

**Some QA results have been flagged as follows:**

- C - Sample concentration is at least 5 times greater than spike contribution. Spike recovery criteria do not apply.
- JL - The batch MS and/or MSD were outside acceptance limits. The batch LCS was acceptable.

PROJECT NAME: JAL #4  
PROJECT NUMBER: NA

NEL ORDER ID: P9910093

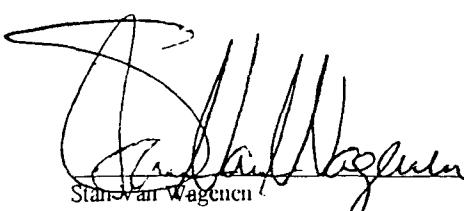

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/23/99.

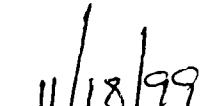

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

**Some QA results have been flagged as follows:**

- C - Sample concentration is at least 5 times greater than spike contribution. Spike recovery criteria do not apply.

ATTN: Darrell Campbell

PROJECT NAME: JAL #4  
PROJECT NUMBER: NA

NEL ORDER ID: P9910099

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/26/99.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

**Some results have been flagged as follows:**

J - This concentration should be considered an estimate due laboratory control sample failure.

**Some QA results have been flagged as follows:**

C - Sample concentration is at least 5 times greater than spike contribution. Spike recovery criteria do not apply.

J - This concentration should be considered an estimate due laboratory control sample failure.

Stan Van Wagener  
Laboratory Manager

PROJECT NAME: JAL #4  
PROJECT NUMBER: NA

NEL ORDER ID: P9910100

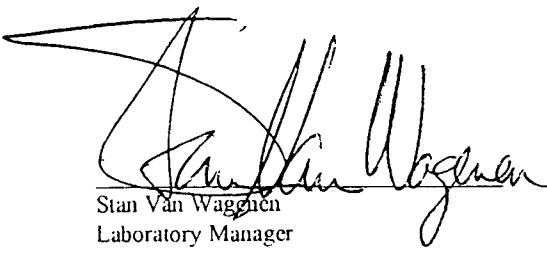

Attached are the analytical results for samples in support of the above referenced project.

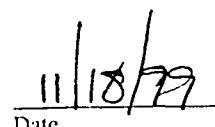

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/26/99.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.

**Some QA results have been flagged as follows:**

C - Sample concentration is at least 5 times greater than spike contribution. Spike recovery criteria do not apply.

PROJECT NUMBER: NA

NEL ORDER ID: P9910101

Attached are the analytical results for samples in support of the above referenced project.

Samples submitted for this project were not sampled by NEL Laboratories. Samples were received by NEL in good condition, under chain of custody on 10/26/99.

Should you have any questions or comments, please feel free to contact our Client Services department at (602) 437-0099.
