1.0 PURPOSE

1.0 PURPOSE

The purpose of this report is to document the closure of an acid plant located at the Dowell Schlumberger Incorporated (Dowell) facility in Artesia, New Mexico. Western Water Consultants, Inc. (WWC) of Laramie, Wyoming directed the activities during the month of November 1994. Approval of the closure activities was granted by The New Mexico Oil Conservation Division (NMOCD) in a letter dated September 28, 1994.

2.0 BACKGROUND

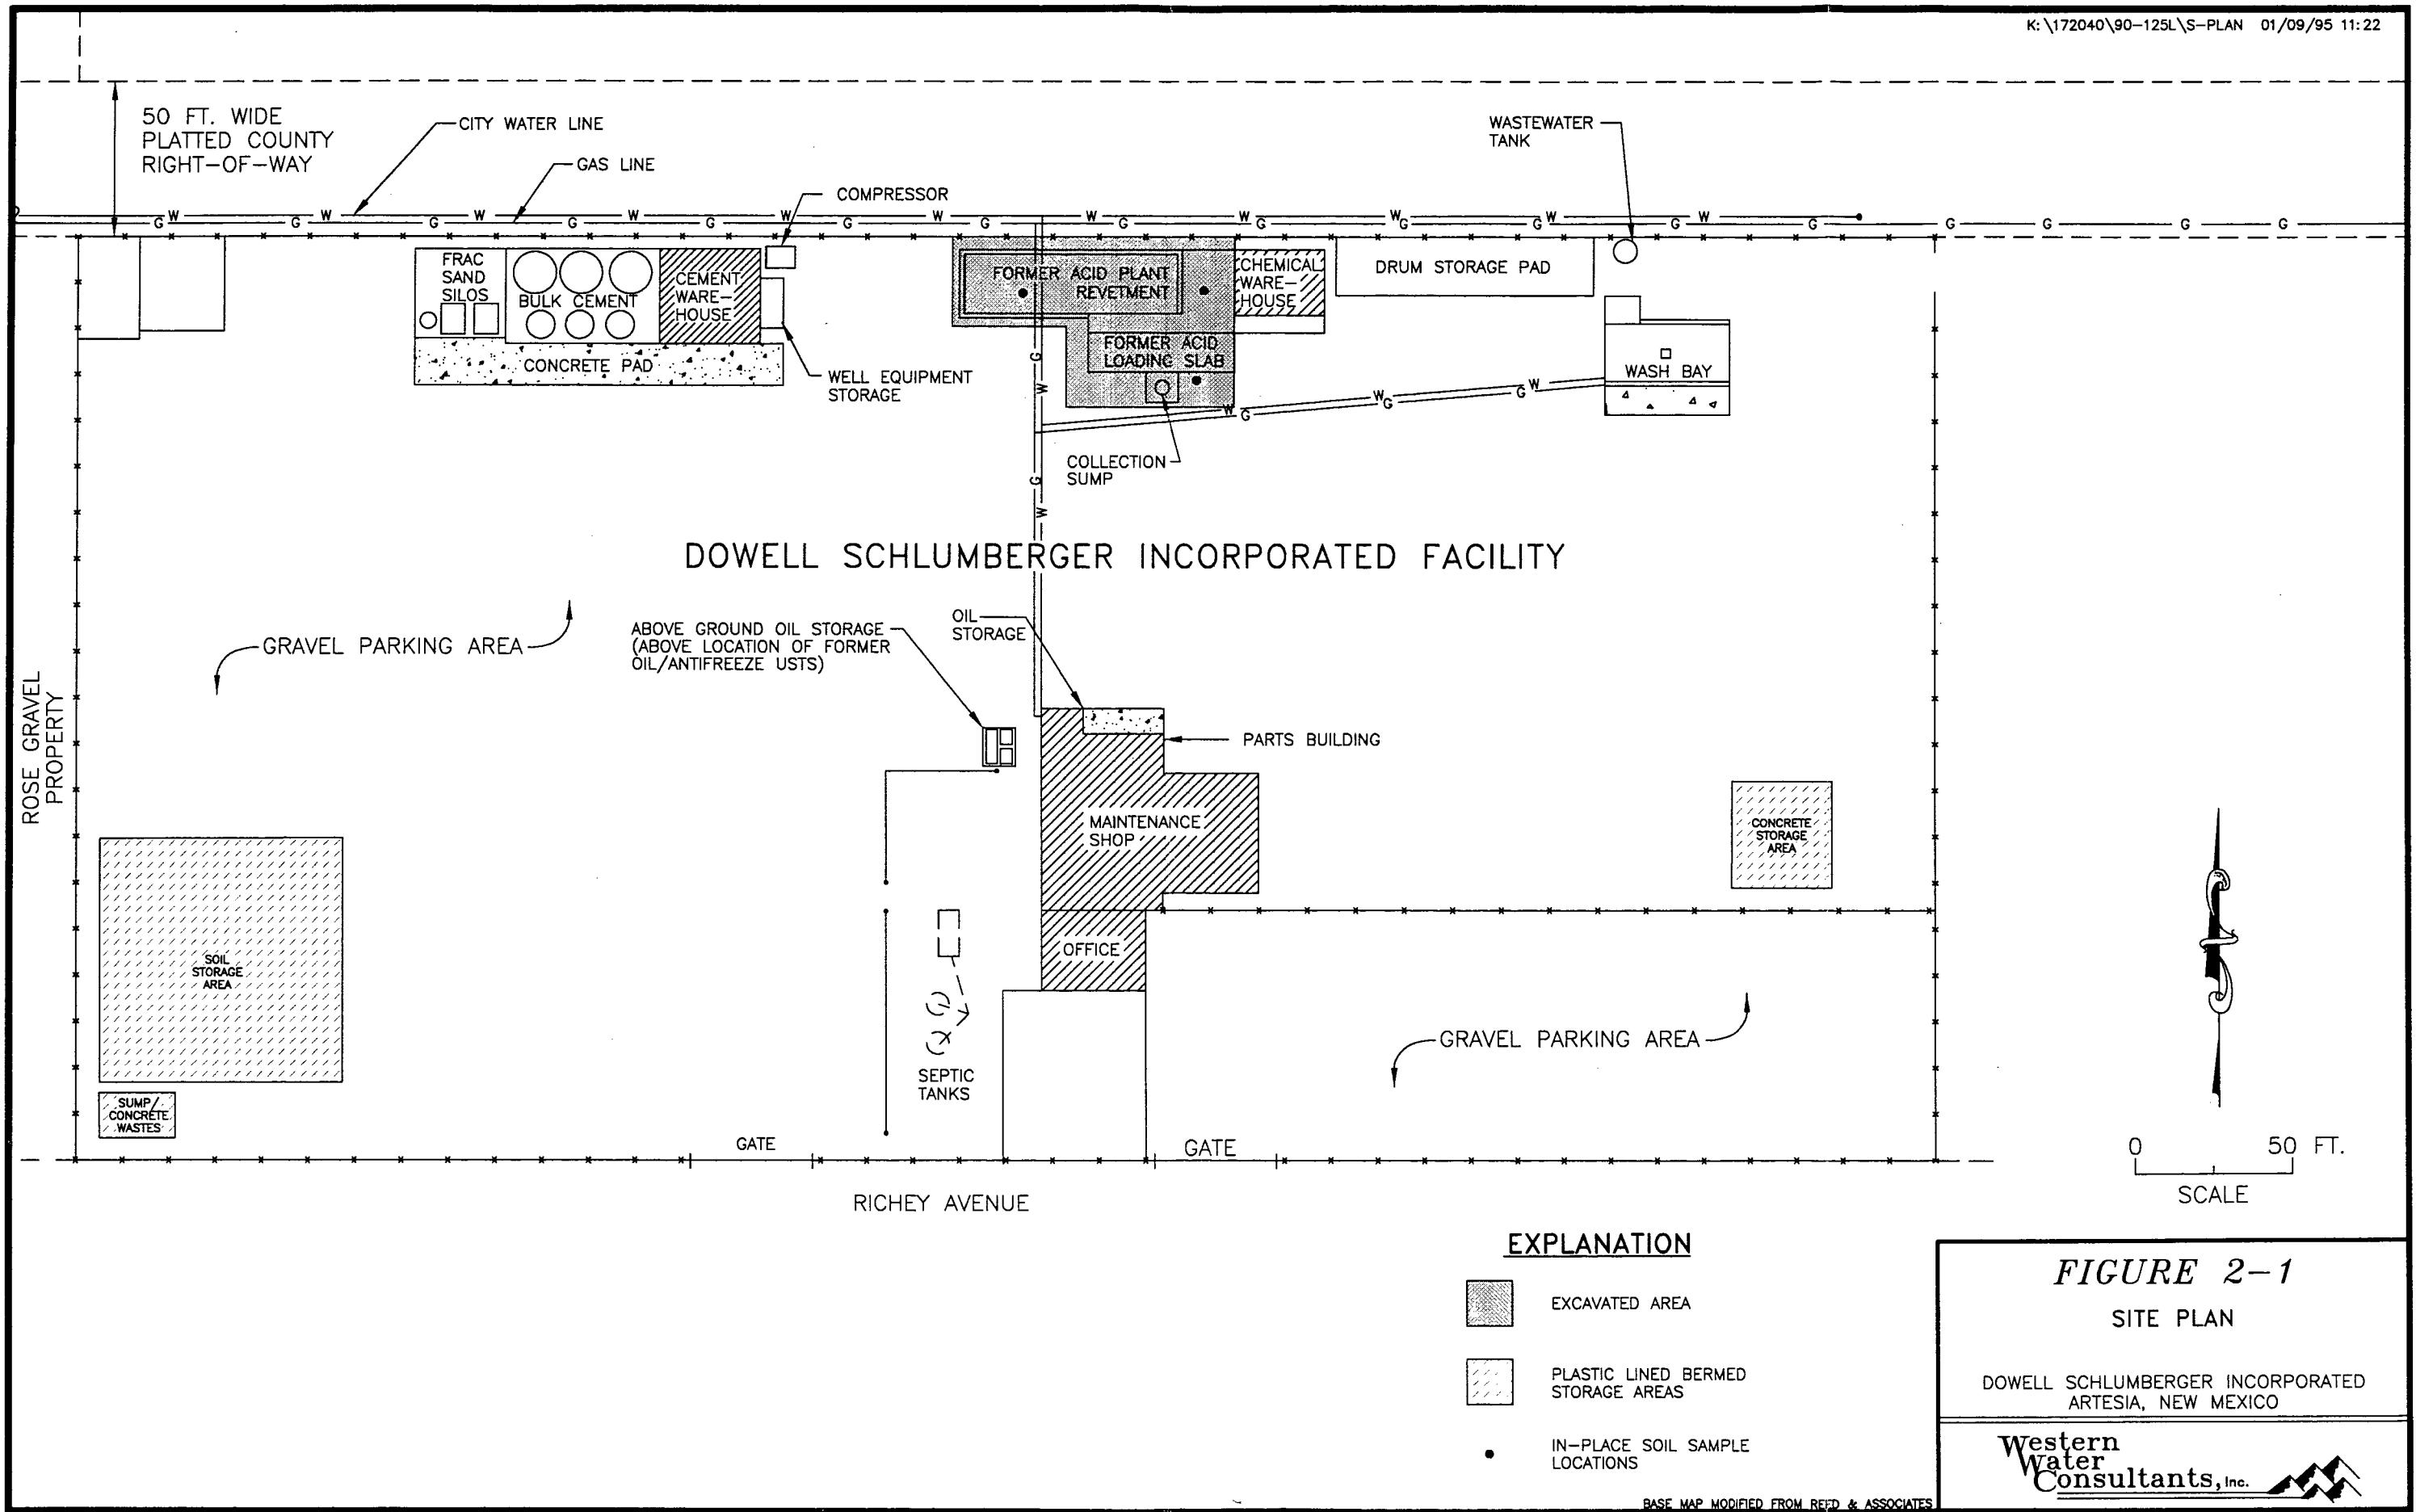

2.0 BACKGROUND

2.1 Site Description

The Dowell facility is located at 500 East Richey in Artesia, New Mexico. A site plan of the facility is shown on Figure 2-1.

The Dowell facility provides services for area oil and gas production wells. Services include well cementing, acidizing/stimulating and formation fracturing. The facility consists of a main office and truck maintenance building, dry chemicals warehouse, concrete batch facility and truck wash bay.

The former acid plant was located in the north central portion of the facility (Figure 2-1). It was comprised of a concrete revetment containing several above ground storage tanks with a loading dock along the south side. Two collection sumps received storm water and incidental spills from the acid plant (Figure 2-2). The entire plant has been out of service since the summer of 1989.

3.0 ACID PLANT CLOSURE

3.0 ACID PLANT CLOSURE

Closure of the former acid plant occurred during the month of November 1994. The acid plant, loading dock and collection sumps were subject to the following closure activities.

3.1 Removal Activities and Field Screening

The acid plant revetment, loading dock, and sumps were removed from the ground and demolished. The concrete and associated PVC piping was scraped and broomed to remove debris adhering to them. The concrete and debris were then placed in separate plastic lined storage areas for later characterization and disposal (Figure 2-1). All soils exposed following the removal of a specific facility were screened in the field for total organic vapors (TOVs) using an Environmental Instruments 580D Photoionization Detector (PID). Soils exposed in the areas of the sumps registered TOV readings ranging up to 1500 parts per million (ppm).

3.2 Excavation

Excavation of the soils followed the dismantling of the sumps and other facilities. Soils exhibiting elevated TOVs were excavated and placed on polyethylene sheeting within a separate plastic lined storage area (Figure 2-1). A total of approximately 1400 cubic yards of soils was removed from beneath the sumps and acid plant. Excavation was limited in part by underground utilities, the property line, and the chemical warehouse.

3.3 Closure Soil Sampling

Once the soil excavation was complete, 3 composite samples were collected representing the material left in-place beneath the former acid plant (Figure 2-1). In addition, composite samples were collected from the material removed from the sumps and concrete, and from the excavated soils placed in the storage area. The samples were analyzed for volatile organic compounds and metals by the toxicity characteristic leaching procedure (TCLP), and total petroleum hydrocarbons by modified EPA Method 8015. The results are shown on Tables 3-1 and 3-2. Chain of Custody documentation and the laboratory data reports are included in Appendix A.

3.4 Material Disposal and Excavation Closure

Materials generated during closure activities include excavated soils and concrete from the sump, revetment, and loading dock. Disposal of the excavated soils will occur at the East Carbon Development Corporation (ECDC) disposal facility in central Utah. Disposal of the concrete at a local landfill is pending NMOCD and local landfill approval. Clean backfill material will be brought in from offsite and emplaced to the surrounding ground surface upon approval by the NMOCD.

SDL = Sample Detection Limit

COMMENTS: _____

COMPANY NAME: Western Water Consultants

CENREF PROJECT NUMBER:

PR941864

CENREF SAMPLE NUMBER:

8059

SAMPLE IDENTIFICATION:

#90125-NEXCAV.11/94

DATE SAMPLED:

11/13/94

DATE EXTRACTED:

11/18/94

DATE/TIME ANALYZED:

11/21/94 @ 1450

*North
End of
Excavation*

**ZHE EXTRACTION
METHOD EPA 8240**

<u>ANALYSIS</u>	<u>CAS NO.</u>	<u>SDL</u> (ug/L)	<u>RESULT</u> (ug/L)
Benzene	71-43-2	50	BDL
Carbon Tetrachloride	56-23-5	50	BDL
