RE: Third Quarterly Reporting of Activities at the Dowell Schlumberger Incorporated Facility
in Artesia, New Mexico

Dear Tony:

This letter constitutes the third quarterly report of remedial activities at the Dowell Schlumberger Incorporated (Dowell) facility in Artesia, New Mexico for the quarter ending in October 1994, as determined in our meeting with you in November 1993. The report presents the results of ground-water monitoring and data from the operation of the two SVE systems at the facility. Soil vapor extraction (SVE) data through early December 1994 have been included. These activities are overseen by the underground Storage Tank Bureau of the New Mexico Environment Department (NMED-UST Bureau). The second quarterly report submitted to NMED-UST Bureau was dated July 25, 1994.

GROUND-WATER MONITORING

Quarterly ground-water monitoring was conducted on October 24 and 25, 1994. Prior to purging wells, static water levels in all monitoring wells were measured with an oil/water interface probe. No floating product was detected in any well. Current and historic water levels are presented in Table 1. A potentiometric surface map generated from the October 1994 data is depicted on Figure 1. The ground-water flow direction is to the northeast, consistent with historic data.

Using dedicated polyethylene bailers, three casing volumes of water were purged from monitoring wells MW-1 through MW-15 before sampling. Using dedicated bailers with volatile organic carbon (VOC) sampling attachments, ground-water samples were collected into VOA vials containing hydrochloric acid preservative supplied by the analytical laboratory. Samples were placed in a cooler with ice immediately after collection and were kept cool until delivery to the laboratory. Samples were analyzed for volatile organics by EPA Method 8240. Results

Mr. Anthony Moreland
December 12, 1994
Page 2

are presented in Table 2 with previous analytical results for comparison. Copies of the laboratory reports are attached to this letter as Appendix A.

SVE SYSTEM OPERATION AND MAINTENANCE

The remediation system at the Artesia facility consists of two separate soil vapor extraction (SVE) systems (Figure 2). These systems are called the maintenance shop SVE system and the wash bay SVE system based on their proximity to these facility improvements. The maintenance shop SVE system consists of two zones, each with 7 vapor extraction wells. The wash bay SVE system consists of three zones, each with 7 vapor extraction wells. The systems have run almost continuously since startup.

Overall Operation

The system has operated continuously since the last quarterly report. On September 30, 1994, the vacuum relief valves on both systems were modified to prevent makeup air from entering the systems. This increases the well vacuum to almost 60 inches of water in all zones. Additionally, the operation of the wash bay system was modified to the following daily sequence:

Zone 1	20 hours
Zone 2	2 hours
Zone 3	2 hours

Due to the subsequent drop in concentrations in Zone 1, the wash bay system was returned to 8 hours per zone on December 5, 1994.

The system vacuum is measured at the blower and system manifold. These measurements are reported in Tables 3 and 4. The differences in these two measurements are very small, indicating no plugging of the filters.

Volatile Organics in Soil Vapors

The concentration of volatile organics in the extracted soil vapor and exhausted vapor are measured during each site visit with an HNu photoionization detector (PID). These data are presented in Tables 5 and 6. Note that the September 30, 1994 measurements include readings both before and after modifications to the vacuum relief valves. Measurements on November 3, 1994 were made with a ThermoEnvironmental Determinator PID and show consistently higher readings.

Mr. Anthony Moreland
December 12, 1994
Page 3

Samples of the vapors have been collected for laboratory analysis using EPA Method 8240. These data are presented in Appendix B and summarized in Table 7. A sample was collected on December 5, 1994 but these results are not yet available.

Maintenance

The systems have been relatively maintenance free. Minor problems have been corrected as they occur. Following is a list of maintenance activities occurring since the last quarterly report:

- On September 7, 1994, problems due to heat in the exhaust air were corrected. The steel pipe on the blower exhaust was lengthened. Flexible hose that had become brittle due to heat was replaced.
- On September 30, 1994, one valve actuator was inoperable. The actuator was cleaned, lubricated, and put back on line.
- On December 5, 1994, the controller at the wash bay SVE system was reprogrammed. The program was lost due to an interruption in electrical service.
- Carbon filters have been replaced at a rate of one every other month at the wash bay system.

ADDITIONAL ACTIVITIES

In early October 1994, 20 additional SVE wells were drilled on Eddy County right of way north of the existing wash bay SVE system. The results of this work were incorporated into the plans and specifications for expansion of the wash bay SVE system into this area. These plans and specifications were submitted to Mr. Jeff Walker of the NMED Groundwater Protection and Remediation Bureau.

Dowell plans to continue operation of both SVE systems and quarterly monitoring of ground water. If you have questions or comments, please contact me.

Sincerely,

John A. Miller
Remediation Manager

NOTES:
 ND(0.001) = chemical not detected at detection limit shown in parentheses
 dup. = duplicate sample
 * = minor amounts of other chemicals also detected (see previous laboratory reports)
 # = minor amounts of other chemicals also detected (see laboratory reports appended to this letter)
 NA = not analyzed

CHEMICAL ABBREVIATIONS:
 TPH = total petroleum hydrocarbons
 1,1-DCA = 1,1-dichloroethane
 1,2-DCA = 1,2-dichloroethane
 1,1-DCE = 1,1-dichloroethene
 1,1,1-TCA = 1,1,1-trichloroethane
 1,1,2-TCA = 1,1,2-trichloroethane
 TCE = trichloroethene
 PCE = tetrachloroethene

NOTES: ND(1) = chemical not detected at detection limit
shown in parentheses

dup. = duplicate sample
* = minor amounts of other chemicals also detected (see previous laboratory reports)
= minor amounts of other chemicals also detected (see laboratory reports appended to this letter)
NA = not analyzed

CHEMICAL ABBREVIATIONS:
1,1-DCA = 1,1-dichloroethane
1,2-DCA = 1,2-dichloroethane
1,1-DCE = 1,1-dichloroethene
1,1,1-TCA = 1,1,1-trichloroethane
1,1,2-TCA = 1,1,2-trichloroethane
TCE = trichloroethene
PCE = tetrachloroethene

NOTES:
 ND(0.001) = chemical not detected at detection limit
 shown in parentheses
 dup. = duplicate sample
 * = minor amounts of other chemicals also detected
 (see previous laboratory reports)
 # = minor amounts of other chemicals also detected
 (see laboratory reports appended to this letter)
 NA = not analyzed

CHEMICAL ABBREVIATIONS:
 TPH = total petroleum hydrocarbons
 1,1-DCA = 1,1-dichloroethane
 1,2-DCA = 1,2-dichloroethane
 1,1-DCE = 1,1-dichloroethene
 1,1,1-TCA = 1,1,1-trichloroethane
 1,1,2-TCA = 1,1,2-trichloroethane
 TCE = trichloroethene
 PCE = tetrachloroethene
