Subject: RE: OCD Discharge Plan Application for Williams Kutz Canyon Gas Plant (GW-045) & Keblah Compressor Station (GW-329)

David:

Today the OCD will close out your GW-329 discharge plan (DP) in RBDMS and transfer the file contents of the GW-329 file into the GW-045 (Williams Kutz Canyon Gas Plant) file. The Kutz Canyon Gas Plant DP does not expire until 6/28/08. Please forward the survey plat from your message below to me for the GW-045 DP file. Please contact me if you have questions. Thank you.

Subject: RE: OCD Discharge Plan Application for Williams Kutz Canyon Gas Plant (GW-045) & Keblah Compressor Station (GW-329)

I have requested an actual survey plat for the facility and will forward it as soon as I receive it from our Right of Way Dept. Until I receive the survey plat, here is a USGS map showing the location of the Keblah Turbine. It is inside the Kutz Canyon Plant property fence.

Subject: RE: OCD Discharge Plan Application for Williams Kutz Canyon Gas Plant (GW-045) & Keblah Compressor Station (GW-329)

Wayne, per our discussion, Keblah is NOT a stand alone compressor station, it is inside the Kutz Canyon Plant, and serves the same function as all the other compressors at the facility. It is also considered part of the Kutz Plant by the NMED which includes the turbine in the air quality permit. The Kutz Canyon Plant includes a number of other compressors, both turbine and reciprocating, and this unit should have not been permitted as a stand alone facility. It is "in plant" horsepower.

Mr. Wayne Price
State of New Mexico
Oil Conservation Division
1220 South St. Francis Dr.
Santa Fe, NM 87505

Dear Mr. Price:

Williams Four Corners, LLC would like to modify its Kutz Canyon Gas Plant OCD Discharge Plan (GW-045) to incorporate the Keblah Compressor Station, which has operated under OCD Discharge Plan GW-329. The Keblah Compressor Station is located within the same property boundary as the Kutz Canyon Gas Plant in Section 12, Township 28 North, Range 11 West, in San Juan County, as shown on the attached site map. Also attached, please find the Discharge Plan Application associated with this request.

The air quality permit for this site allows the operation of one 1200-hp Solar turbine, as noted in the documentation previously submitted to your office. Attached please find Table 1 of the Kutz Discharge Plan (submitted in 2003) titled *Source, Quantity and Quality of Effluent and Waste Solids,* and the last page of Table 2 of the same plan titled *Transfer, Storage, and Disposal of Process Fluids, Effluents, and Waste Solids* which have been revised to include information regarding the Keblah Compressor Station. Revised text has been underlined and italicized in the tables for convenience. No other changes or updates are applicable at this time. When the Kutz Canyon Gas Plant Discharge Plan (GW-045) is due for renewal, all applicable modifications will be incorporated into the documentation.

Documentation attached to this letter includes:

- Discharge Plan Application form
- Site map
- Site plot plan
- Table 1, revised, *Source, Quantity and Quality of Effluent and Waste Solids, Kutz Canyon Gas Plant*
- Table 2, revised, *Transfer, Storage, and Disposal of Process Fluids, Effluents, and Waste Solids, Kutz Canyon Gas Plant*
- Public Notice

If you have any questions, I can be reached at 505-634-4951.

Respectfully submitted,

David Bays

PUBLIC NOTICE

Notice of Discharge Plan Modification Application

Keblah Compressor Station

Pursuant to the requirements of the New Mexico Water Quality Control Commission Regulation 20 NMAC 2.6.2 – GROUND AND SURFACE WATER PROTECTION, Williams Four Corners, LLC of 188 County Road 4900, Bloomfield, NM 87413, hereby announces intent to submit to the Oil Conservation Division a Discharge Plan Modification application for the permitted Keblah Compressor Station (GW-329) and incorporate it into the Williams Four Corners, LLC Kutz Plant Discharge Plan (GW-045), as the sites are located within the same property line. Williams expects to submit the permit application to the Oil Conservation Division in December 2006.

The facility, located in Section 12, Township 28 North, Range 11 West, San Juan County, New Mexico, approximately 2 miles south of Bloomfield, provides natural gas metering and compression services.

The discharge permit addresses how spills, leaks, and other accidental discharges to the surface will be managed. The facility does not discharge wastewater to surface or subsurface waters. All wastes generated will be temporarily stored in tanks or containers. Waste shipped offsite will be disposed or recycled at an OCD approved site. In the event of an accidental discharge, ground water most likely will not be affected. The estimated ground water depth at the site is expected to be in the range of 200 to 500 feet. The total dissolved solids concentration of area ground water is expected to be in the range of 200-2,000 parts per million.

Comments or inquiries regarding this permit or the permitting process may be directed to:

Director of the Oil Conservation Division
1220 South Saint Francis Dr.
Santa Fe NM 87505
(505) 827-1464

Please refer to the company name and site name, as used in this notice, or send a copy of this notice when making inquiries, since the Department might not have received the application at the time of this notice.

Santa Fe, NM 87410

Dear Madam/Sir:

This letter is to advise you that Williams Four Corners, LLC is preparing to submit to the Oil Conservation Division a Discharge Plan Modification application for the permitted Keblah Compressor Station (GW-329) and incorporate it into the Williams Four Corners, LLC Kutz Plant Discharge Plan (GW-045), as the sites are located within the same property line. This notice is a requirement pursuant to New Mexico Water Quality Control Commission Regulations. We expect to submit the Discharge Plan Modification application to the Oil Conservation Division during December 2006.

The facility, located in Section 12, Township 28 North, Range 11 West, San Juan County, New Mexico, approximately 2 miles south of Bloomfield, provides natural gas metering and compression services.

The discharge permit addresses how spills, leaks, and other accidental discharges to the surface will be managed. The facility does not discharge wastewater to surface or subsurface waters. All wastes generated will be temporarily stored in tanks or containers. Waste shipped offsite will be disposed or recycled at an OCD approved site. In the event of an accidental discharge, ground water most likely will not be affected. The estimated ground water depth at the site is 200 to 500 feet. The total dissolved solids concentration of area ground water is expected to be in the range of 200-2,000 parts per million.

Re: Change of Company Name

Dear Mr. Price;

In accordance with Conditions of Discharge Plan Approval attached to each discharge plan approved by the New Mexico Oil Conservation Division, we hereby provide notice of a change of ownership for the Williams facilities identified in the attached table to Williams Four Corners, LLC.

As a corporate strategy, Williams has created regional limited liability corporations for our assets. So, although a new corporation has been created, Williams Four Corners LLC is still a wholly-owned unit of Williams, and there is no change of corporate ownership for these facilities. Williams will continue to comply with the terms and conditions of all approved discharge plans. All other administrative items (responsible official, environmental contacts, mailing addresses, etc.) remain unchanged.

If you have any questions, please call David Bays, Senior Environmental Specialist, at (505) 632-4951 or Ingrid Deklau of Cirrus Consulting at (801) 583-3107.

Sincerely,

David Bays
Senior Environmental Specialist

Re: Drain Line Testing Results at Various Williams Field Services Facilities

Dear Mr. Ford:

Williams Field Services conducted a facility review and drain line testing in accordance to the Oil Conservation Division Discharge Plan requirements. Subsurface, non-pressurized process and wastewater lines were tested. The facility drain line testing reports are enclosed with this letter. A review and testing summary is provided in the table below.

Facility	Permit #	Completion Date	Results	Comments
El Cedro	GW-149	07/26/2004	Passed	
Honolulu	GW- 315	08/05/2004	Passed	Visual inspection, piping above ground
Kutz #1 & #2	GW-045	07/16/2004	Passed	Test done on multiple days
Navajo	GW-182	07/28/2004	Passed	

If you have any questions or require additional information, please contact me at (505) 632-4606.

Respectfully Submitted,

Clara M. Garcia

Operator Name: **Williams Field Services** **(NMOCD Discharge Plan: GW-045)**

Operator Address: **188 CR 4900, Bloomfield, NM 87413**

Lease or Facility Name **Kutz Canyon Gas Plant** Location **NW/4 S13, T28N, R11W**
Ut. Ltr. Sec. Twp. Rge

Size of pit or tank: **236 ft X 236 ft X 10 ft (Evaporation Pond)**

Operator requests exception from the requirement to screen, net or cover the pit or tank at the above-described facility.

The pit or tank is not hazardous to migratory waterfowl. Describe completely the reason pit is non-hazardous.

Pond is used to evaporate waste water from the processing plant (Kutz I and II). An API oil/water separator is located upstream of effluent to pond to prevent incidental oil form reaching the pond. Perimeter is fenced and sprayers help to discourage wildlife and birds from using pond.

1) If any oil or hydrocarbons should reach this facility, give method and time required for removal:

Should oil reach the pond, a boom will be used to isolate oil and the oil will be skimmed from the water surface.

2) If any oil or hydrocarbons reach the above-described facility, the operator is required to notify the appropriate District Office of the OCD with 24 hours.

Operator proposes the following alternate protective measures: _____

RE: Site Modification Approval
GW-045, Kutz Canyon Gas Plant
San Juan County, New Mexico

Dear Mr. Lane:

The OCD has received the site modification letter and site plan, dated July 22, 2003, from Williams Field Services for the Kutz Canyon Gas Plant GW-045 located in NW/4, Section 13, Township 28 North, Range 11 West, NMPM, San Juan County, New Mexico. The request to locate an additional slop glycol storage tank at the site is **hereby approved and is considered a minor modification to the current discharge permit.**

Please note that 20 NMAC 6.2.3104 of the regulations requires that **"When a plan has been approved, discharges must be consistent with the terms and conditions of the plan."** Pursuant to 20 NMAC 6.2.3107.C Williams Field Services is required to notify the Director of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume. Further, this approval does not relieve Williams Field Services from liability should operations result in contamination to the environment.

Sincerely,

W. Jack Ford, C.P.G.

RE: Request to add a Slop Glycol Tank (T-15206)
Plant Discharge Plan: GW-045
Kutz Canyon Gas Plant, San Juan County, NM

This correspondence is to request permission to locate an additional slop glycol storage tank at the reference facility. The tank will have a 1,000 gallon capacity, located within a block and concrete secondary containment, and will be identified as (T-15206). Refer to the attached Figure (KTZ-1-P7) from the Discharge Plan (February 2003).

A revised copy of Table 2 of the reference Discharge Plan is included with this request.

If there are any questions or additional information is requested, please contact me at (505) 632-4625.

Respectfully submitted,

Michael Lane

COPY OF PUBLICATION

NOTICE OF PUBLICATION

STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge permit application(s) has been submitted to the Director of the Oil Conservation Division, 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-045) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services Kutz Canyon Gas Processing Plant facility located in the SW/4 of Section 12, NE/4 of Section 13, SE/4 of Section 14, Township 28 North, Range 11 West, NMPM, San Juan County, New Mexico. Approximately 1 to 1.5 million gallons per year of process waste water is disposed of in an OCD approved double lined evaporation pond with leak detection. The total dissolved solids (TDS) of the waste water is approximately 1,500 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is shallow perched water with TDS concentrations ranging from 8,000 to 18,000 mg/l. Deeper ground water is at a depth of 200 feet with estimated total dissolved solids concentration ranging from 2,000 to 4,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.
(GW-129) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services Crouch Mesa CDP Compressor Station located in the SE/4 NE/4 of Section 23, Township 29 North, Range 12 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 200 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.
(GW-133) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services 30-8 CDP Compressor Station located in the SW/4 SE/4 of Section 32, Township 31 North, Range 8 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 220 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.
(GW-134) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services Decker Junction Compressor Station located in the NE/4 SE/4 of Section 19, Township 32 North, Range 10 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 30 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.
(GW-155) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR

4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services Aztec CDP Compressor Station located in the SW/4 SW/4 of Section 8, Township 32 North, Range 10 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 50 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-306) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services Trunk N Compressor Station located in the NW/4 NE/4 of Section 8, Township 32 North, Range 7 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 200 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-292) - Williams Field Services, Michael K. Lane, (505) 632-4625, 188 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge renewal application for the Williams Field Services facility located on the boundary of the NE/4 NE/4 of Section 7 and the NW/4 NW/4 of Seciton 8, Township 31 North, Range 6 West, NMPM, San Juan County, New Mexico. Approximately 2,400 gallons per year of waste water is collected in a fiberglass storage tank then transported offsite for disposal. Ground water most likely to be affected in the event of an accidental discharge is at an estimated depth of approximately 300 feet with a total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge permit application and draft discharge permit may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday. The draft discharge permit may also be viewed at OCD's web site http://www.emnrd.state.nm.us/ocd/. Prior to ruling on any proposed discharge permit or its modification, the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted to him and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed permit based on information available. If a public hearing is held, the director will approve or disapprove the proposed permit based on information in the permit and information submitted at the hearing.

GIVEN under the Seal of New Mexico Oil Conservation Commission at Santa Fe, New Mexico, on this 17th day of June 2003.

STATE OF NEW MEXICO

LORI WROTENBERY, Director

Legal No. 48168 published in The Daily Times, Farmington, New Mexico on Monday, June 30, 2003.

NOTICE OF PUBLICATION

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge permit application(s) has been submitted to the Director of the Oil Conservation Division, 1220 S. Saint Francis Drive, Santa Fe, New Mexico 87505, Telephone (505) 476-3440:

(GW-296) – Flatrock Energy Partners on behalf of Raptor Gas Transmission LLC, operated by ConocoPhillips Midstream Operations, Joyce Miley, (281) 293-4498, P.O. Box 2197-Humble 3036, Houston, Texas 77252-2197, has submitted a discharge permit renewal application for the Cedar Canyon Compressor Station located in the SE/4 SE/4 of Section 9, Township 24 South, Range 29 East, NMPM, Eddy County, New Mexico. All wastes generated will be stored in closed top receptacles prior to offsite disposal or recycling at an OCD approved site. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 50 feet with a total dissolved solids concentration of approximately 1000 mg/l. Natural gas products, waste oil and water is stored in above ground tanks prior to being transported off-site to OCD approved facilities. The discharge permit addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-143) – Flatrock Energy Partners on behalf of Raptor Gas Transmission LLC, operated by ConocoPhillips Midstream Operations, Joyce Miley, (281) 293-4498, P.O. Box 2197-Humble 3036, Houston, Texas 77252-2197, has submitted a discharge permit renewal application for the Cal Mon Compressor S[illegible]n located in the [illegible]/4 NW/4 of Section 35, Township 23 South, Range 31 East, NMPM, Eddy County, New Mexico. All wastes generated will be stored in closed top receptacles prior to offsite disposal or recycling at an OCD approved site. Ground water most likely to be affected in the event of an accidental discharge is at a depth of approximately 200 feet with a total dissolved solids concentration of approximately 3500 mg/l. Natural gas products, waste oil and water are stored in above ground tanks prior to being transported off-site to OCD approved facilities. The discharge permit addresses how oilfield products and waste will be properly handled, stored, and disposed of, including how spills, leaks, and other accidental discharges to the surface will be managed in order to protect fresh water.

(GW-136) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services 29-7 #1 CDP Compressor Station located in the NE/4 SE/4 of Section 15, Township 29 North, Range 7 West, NMPM, Rio Arriba County, New Mexico. Approximately 5000 to 15000 gallons per year of waste water is stored in an above ground storage tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 50 to 200 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-149) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services El Cedro Compressor Station located in the NW/4 of Section 31, Township 29 North, Range 5 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of approximately 145 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-295) – Smith Services (formerly B & B Machine Shop), Mr. Maurice Sticker, (505) 393-4964, 1120 West Bender Blvd., Hobbs, New Mexico 88240, has submitted a discharge renewal application for the Smith Services (formerly B & B Machine Shop) Hobbs Facility located in Section 21, Township 18 South, Range 38 East, NMPM, Lea County, New Mexico. Approximately 30 gallons per month of waste motor oils are collected in drums then transported offsite for disposal. Approximately 2 gallons per month of used solvents are recycled on site. Scrap metals are collected in barrels and transported off site for recycling. Ground water most likely to be affected in the event of an accidental discharge is at an estimated depth of 50 feet with a total dissolved solids concentration ranging from 390 to 480 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-045) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services Kutz Canyon Gas Processing Plant facility located in the SW/4 of Section 12, NE/4 of Section 13, SE[illegible] of Section 14, Tow[illegible]ip 28 North, Range 11 West, NMPM, San Juan County, New Mexico. Approximately 1 to 1.5 million gallons per year of process waste water is disposed of in an OCD approved double lined evaporation pond with leak detection. The total dissolved solids (TDS) of the waste water is approximately 1,500 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is shallow perched water with TDS concentrations ranging from 8,000 to 18,000 mg/l. Deeper ground water is at a depth of 200 feet with estimated total dissolved solids concentration ranging from 2,000 to 4,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-129) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services Crouch Mesa CDP Compressor Station located in the SE/4 NE/4 of Section 23, Township 29 North, Range 12 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 200 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-133) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams Field Services 30-8 CDP Compressor Station located in the SW/4 SE/4 of Section 32, Township 31 North, Range 8 West, NMPM, San Juan County, New Mexico. Approximately 1000 to 4000 barrels per year of processed water is stored in an above ground steel tank prior to transport to an OCD approved off-site disposal facility. The total dissolved solids (TDS) of the waste water is approximately 1,100 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is at a depth of 220 feet with estimated total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-134) - Williams Field Services, Michael K. Lane, (505) 632-4625, 118 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge plan renewal application for the Williams

Ground water most likely to be affected in the event of an accidental discharge is at an estimated depth of approximately 300 feet with a total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-293) - Williams Field Services, Michael K. Lane, (505) 632-4625, 188 CR 4900, Bloomfield, New Mexico 87413, has submitted a discharge renewal application for the Williams Field Services Gallegos compressor station facility located in the NW/4 NW/4 of Section 7, Township 25 North, Range 10 West, NMPM, San Juan County, New Mexico. Approximately 200 gallons per year of waste water is collected in a fiberglass storage tank then transported offsite for disposal. Ground water most likely to be affected in the event of an accidental discharge is at an estimated depth of 200 feet or more with a total dissolved solids concentration of approximately 3,700 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges

ACKNOWLEDGEMENT OF RECEIPT OF CHECK/CASH

I hereby acknowledge receipt of check No 3500002622 dated 3/14/03,

or cash received on ____________ in the amount of $ 600.00

from Williams Field Services

for See attached

Re: Discharge Plan GW- Application Renewal and Filing Fee

Dear Mr. Ford:

Enclosed please find copies of Discharge Plan application renewal and check number 3500002622 for $600.00 to cover the filling fee for the following Williams Field Services (WFS) Compressor Stations:

- 30-8 CDP (GW-133)
- Aztec CDP (GW-155)
- Crouch Mesa CDP (GW-129)
- Decker Junction CS (GW-134)
- Kutz Canyon Plant (GW-045)
- Trunk N CS (GW-306)

Williams Field Services appreciates your assistance in handling these applications and fees. If you have any questions or require additional information, please contact me at 505/632/4606.

Thank you,

Clara M Garcia
Environmental Compliance

DISCHARGE PLAN APPLICATION FOR SERVICE COMPANIES, GAS PLANTS. REFINERIES, COMPRESSOR, AND CRUDE OIL PUMP STATIONS

(Refer to the OCD Guidelines for assistance in completing the application)

☐ New ☑ Renewal ☐ Modification

1. Type: Compressor Station (Kutz Canyon Plant GW-045)

2. Operator: Williams Field Services Company

   Address: 188 CR 4900, Bloomfield, New Mexico 87413

   Contact Person: Michael K. Lane Phone: (505) 632-4625

3. Location: NW/4 Section 13 Township 28 North Range 11 West
   Submit large scale topographic map showing exact location.

4. Attach the name, telephone number and address of the landowner of the facility site.

5. Attach the description of the facility with a diagram indicating location of fences, pits, dikes and tanks on the facility.

6. Attach a description of all materials stored or used at the facility.

7. Attach a description of present sources of effluent and waste solids. Average quality and daily volume of waste water must be included.

8. Attach a description of current liquid and solid waste collection/treatment/disposal procedures.

9. Attach a description of proposed modifications to existing collection/treatment/disposal systems.

10. Attach a routine inspection and maintenance plan to ensure permit compliance.

11. Attach a contingency plan for reporting and clean-up of spills or releases.

12. Attach geological/hydrological information for the facility. Depth to and quality of ground water must be included.

13. Attach a facility closure plan, and other information as is necessary to demonstrate compliance with any other OCD rules, regulations and/or orders.

14. CERTIFICATION

   I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

   Name: Michael K. Lane Title: Environmental Specialist III

DISCHARGE PLAN RENEWAL

KUTZ CANYON PLANT
(GW-045)

Williams Field Services Company

February 2003

Table of Contents

List of Tables

List of Figures - All figures follow Section XI

List of Appendices

I. TYPE OF OPERATION

This facility is classified as a natural gas processing plant. The plant removes ethane and higher hydrocarbons from field natural gas. The hydrocarbons that are removed are marketed in several places. The residual natural gas is also marketed by another company. Williams purchased the plant in 1995.

II. LEGALLY RESPONSIBLE PARTY

Williams Field Services
188 CR 4900
Bloomfield, NM 87413
(505) 632-4625

Contact Person:
Michael K. Lane, Senior Environmental Specialist
Phone and Address, Same as Above

III. LOCATION OF FACILITY

The Kutz Canyon Plant is located in Section 13, Township 28 North, Range 11 West, in San Juan County, New Mexico, approximately 3 miles south of Bloomfield, New Mexico. A site location map is attached (USGS 7.5 Min. Quadrangle: Bloomfield, New Mexico) as Figure 1. The facility layout is illustrated in Figure 2. All figures are attached following Section XI of the text.

IV. LANDOWNER

Williams Field Services is leasing the subject property from:

Bureau of Land Management
1235 N. La Plata Highway
Farmington, NM 87401
(505) 599-8900

V. FACILITY DESCRIPTION

The Plant was originally constructed in 1949. The Plant consists of two different extraction systems to remove ethane and higher hydrocarbons from field natural gas. The Kutz #1 Processing Unit was built in 1949 with a designed unit capacity for 120 million cubic feet of gas per day using refrigerated oil absorption process. An upgrade and new extraction system, the Kutz #2 Processing Unit was added in 1976. The Kutz #2 unit was designed for a cryogenic process and has a capacity of approximately 80 mmcf/d. Both units are currently active. The hydrocarbons that are removed are marketed in several places. The residual natural gas is also marketed by another company.

VI. SOURCE, QUANTITY, AND QUALITY OF EFFLUENTS AND WASTE SOLIDS

The source, quantity, and quality of effluent and waste solids generated at the compressor station are summarized in Table 1.

TABLE 1
SOURCE, QUANTITY, AND QUALITY OF EFFLUENT AND WASTE SOLIDS
KUTZ CANYON PLANT

PROCESS FLUID/WASTE	SOURCE	QUANTITY (Ranges)	QUALITY
Used Oil	Engines, Compressors, Oil/Water Separator	1,000–5,000 gallons/month	Used motor oil w/no additives
Used Solvent	Parts Cleaner	0-500 gal/year	No additives
Condensate & Natural Gasoline	Gas Conditioning Process	40,000-100,000 gallons/month	No additives
Condensate	Flare Separator	2,000-5,000 gallons/month	Hydrocarbons with traces of glycol and amine
Condensate/Amine	Flare Separator	2,000-5,000 gallons/month	Hydrocarbons with amine
Waste Water	Cooling Tower, Filter Separator, Open Drain System/Wash Down water, Produced Water, Kutz 2 Control Room Sink, Iron Sponge Process Water, Oil/Water Separator	1-1.5 million gallons/year	High TDS water, dissolved salts, traces of amine, glycol and oil
Used Oil Filters	Engines and Compressors	500-1,000 filters/year	No additives
Used Process Filters	Air, Inlet, Fuel Gas, CO_2 and Hydrocarbon Removal	500-1,500/year	No additives
Empty Drums / Containers	Liquid Containers	200-800/year	No additives
Spill Residue (i.e., gravel, soil)	Incidental spills	Incident dependent	Incident dependent
Used Mole Sieve	Used in removal of water from Natural gas stream	20,000-25,000 lbs/yr	No additives
Used Iron Sponge	H2S Treatment System	500-1,000 bushels/yr	No additives
Used Carbon	Amine System	4,000-6,000 lbs/yr	No additives
Used Absorbents	Incidental spill/leak equipment wipe-down	Incident dependent	No additives

VII. TRANSFER, STORAGE, AND DISPOSAL OF PROCESS FLUIDS, EFFLUENTS AND WASTE SOLIDS

Wastes generated at this facility fall into two categories: exempt and non-exempt. Exempt wastes include, but may not be limited to, used process filters. Non-exempt wastes include, but may not be limited to, used oil, used oil filters, and engine coolant. Table 2 describes the transfer, storage and disposal of exempt and non-exempt process fluids, effluents, and waste solids expected to be generated at the site.

TABLE 2
TRANSFER, STORAGE, AND DISPOSAL OF PROCESS FLUIDS, EFFLUENTS, AND WASTE SOLIDS
KUTZ CANYON PLANT

PROCESS FLUID/WASTE	STORAGE	CONTAINER CAPACITY (approximate)	CONTAINMENT/ SPILL PREVENTION	RCRA STATUS	DESCRIPTION OF FINAL DISPOSITION
Waste Water	Pond	N/A	Double Lined	Non-exempt	Liquids are directed to the pond for evaporation. Liquids may be transported for disposal at an approved disposal facility. A Waste Acceptance Profile will be filed with the disposal facility.
Natural Gasoline (Tank 3)	Above Ground Storage Tank	19,000 gallons	Concrete Wall with Earthen Floor	Exempt	Saleable liquids may be sold to refinery or liquid may be disposed at NMOCD- approved facility.
Amine/Gasoline Slop (Tank 30)	Above Ground Storage Tank	8,820 gallons	Metal Walls with Earthen Floor	Exempt	Saleable liquids may be sold to refinery or liquid may be disposed at NMOCD- approved facility.
Used Oil/Water Slop (Tank 31)	Above Ground Storage Tank	4,200 gallons	Metal Walls with Earthen Floor	Non-exempt	Transported to an EPA-registered used oil marketer for recycling or disposal at an approved disposal facility.
Waste Water (Tank 32)	Above Ground Storage Tank	10,500 gallons	Metal Walls with Earthen Floor	Non-exempt	Liquids are directed to the pond for evaporation. Liquids may be transported for disposal at an approved disposal facility. A Waste Acceptance Profile will be filed with the disposal facility.
Used Oil/Amine/ Glycol (Tank 40)	Above Ground Storage Tank	1,000 gallons	Fiberglass Tank	Non-exempt	Transported to an EPA-registered used oil marketer for recycling or disposal at an approved disposal facility.
Condensate (Tank 52)	Above Ground Storage Tank	2,000 gallons	Metal Walls with Earthen Floor	Exempt	Saleable liquids may be sold to refinery or liquid may be disposed at NMOCD- approved facility.
Used Oil (Tank 40)	Above Ground Storage Tank	2,000 gallons	Concrete Wall with Earthen Floor	Non-exempt	May be hauled to a WFS or contactor consolidation point before transport to EPA-registered used oil marketer for recycling.
Compressor Used Oil	Above Ground Storage Tank	500 gallons	Metal Tank	Non-exempt	May be hauled to a WFS or contactor consolidation point before transport to EPA-registered used oil marketer for recycling.
Used Oil Filters	Roll off bin or other container	Varies	Transported to a WFS or contractor facility in drum or other container	Non-exempt	Transported to a WFS or contractor consolidation point, drained, and ultimately transported for disposal at an approved disposal facility. A Waste Acceptance Profile will be filed with the disposal facility. Recycling options may be considered when available.

TABLE 2 Continued
TRANSFER, STORAGE, AND DISPOSAL OF PROCESS FLUIDS, EFFLUENTS, AND WASTE SOLIDS
KUTZ PLANT

PROCESS FLUID/WASTE	STORAGE	CONTAINER CAPACITY (approximate)	CONTAINMENT/ SPILL PREVENTION	RCRA STATUS	DESCRIPTION OF FINAL DISPOSITION
Used Absorbents	Roll off bin or other container	Varies	Transported to a WFS or contractor facility in drum or other container	Exempt	Transported to a WFS or contractor consolidation point, drained, and ultimately transported for disposal at an approved disposal facility. A Waste Acceptance Profile will be filed with the disposal facility. Recycling options may be considered when available.
Used Process Filters	Roll off bin or other container	Varies	Transported to a WFS or contractor facility in drum or other container	Exempt	Drained, transported to a WFS or contractor consolidation point, and ultimately transported for disposal at an approved disposal facility. A Waste Acceptance Profile will be filed with the disposal facility. Recycling options may be considered when available.
Empty Drums / Containers	N/A	N/A	Concrete Walls with Earthen Floor	Non -exempt	Barrels are returned to supplier or transported to a WFS or contractor consolidation point and ultimately recycled/disposed consistent with applicable regulations.
Spill Residue (i.e., soil, gravel)	N/A	N/A	In situ treatment, land-farm, or alternate method	Incident dependent	Per Section VI, Remediation, in 8/13/93 NMOCD Guidelines for Remediation of Leaks, Spills, and Releases.
Used Mole Sieve	Roll off bin or other container	Varies	Transported to a WFS or contractor facility in drum or other container	Exempt	Transported to a WFS or contractor consolidation point, drained, and ultimately transported for disposal at an approved disposal facility. A Waste Acceptance Profile will be filed with the disposal facility. Recycling options may be considered when available.
Used Carbon	Roll off bin or other container	Varies	Transported to a WFS or contractor facility in drum or other container	Exempt	Transported to a WFS or contractor consolidation point, drained, and ultimately transported for disposal at an approved disposal facility. A Waste Acceptance Profile will be filed with the disposal facility. Recycling options may be considered when available.
Lean Oil (Tank 2)	Above Ground Storage Tanks	19,900 gallons	Concrete Walls with Earthen Floor	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Methanol (Tank 3)	Above Ground Storage Tanks	19,900 gallons	Concrete Walls with Earthen Floor	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Diesel (Tank 50)	Above Ground Storage Tanks	1,000 gallons 200 gallons	Concrete Walls with Earthen Floor	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Lube Oil (Tank 51)	Above Ground Storage Tank	3,000 gallons	Concrete Walls with Earthen Floor	N/A	Off-spec material recycled or disposed consistent with applicable regulations.

Gasoline	Above Ground Storage Tanks	300 gallons	Berm	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Diesel	Above Ground Storage Tanks	300 gallons	Berm	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Petroleum Solvent	Above Ground Storage Tanks	300 gallons	Berm	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Refrigerant Grade Propane	Above Ground Storage Tanks	20,000 gallons	Berm	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Propane	Above Ground Storage Tanks	80,000 gallons	N/A	N/A	Off-spec material recycled or disposed consistent with applicable regulations.
Y-Product	Above Ground Storage Tanks	(2) 80,000 gallons	N/A	N/A	Off-spec material recycled or disposed consistent with applicable regulations.

Non-exempt waste management will be conducted in accordance with NMOCD requirements including the preparation of a Certificate of Waste Status for each non-exempt waste stream. Non-exempt wastes will be analyzed at a minimum for BTEX, TPH, RCRA D-List metals, ignitability, corrosivity, and reactivity to initially determine if such waste are hazardous as defined in 40 CFR Part 261. All wastes at the facility will be periodically surveyed for naturally occurring radioactive material (NORM) to determine if the concentrations of radium 226 exceed 30 picocuries per gram or if radiation exposure exceeds 50 microroentgens per hour. If affirmed, such materials will be handled and disposed in accordance with NMOCD NORM Regulations.

Barring facility modification and/or process changes, the classification of non-exempt wastes by laboratory analyses will be made once during the approval period of this plan. Subsequent laboratory analyses will be performed at the generator's discretion (minimum of once every five years), or more frequently to comply with waste acceptance procedures of the disposal facility.

VIII. STORM WATER PLAN

This storm water section was developed to provide a plan to monitor and mitigate impact to storm water runoff from the facility. It serves to satisfy storm water management concerns of the NMOCD. It is not intended to comply with 40 CFR Part 122, Storm Water Discharges as this facility is excluded in 122.26 (c) (1) (iii).

This section concentrates on the identification of potential pollutants, inspection and maintenance of the pollutant controls, and gives a description of structural controls to prevent storm water pollution.

Site Assessment and Facility Controls

An evaluation of the material used and stored on this site that may be exposed to storm water indicates that no materials would routinely be exposed to precipitation. The process units have a waste water system which channels process, floor drain, and cooling tower waste waters into the lined evaporation pond located at the southwest corner of the plant.

Storm water flows from the facility via culverts and trenches into the storm water impoundment located west of the facility. Any leakage or spill that is not contained in the vicinity of the source would be contained by storm water impoundment pond. Cleanup of the substance and implementation of mitigation measures could be conducted while protecting downstream storm watercourses.

Best Management Practices

Following are Best Management Practices (BMPs) to be implemented to prevent or mitigate pollution to storm water from facility operations:

- All waste materials and debris will be properly disposed of on an on-going basis in appropriate containers and locations for collection and removal from the site.

- Temporary storage of potential pollutant sources will be located in areas with appropriate controls for storm water protection. This would include ensuring all containers are sealed/covered and otherwise protected from contact with precipitation.

- Periodic inspection of channels and culverts shall be performed at least twice annually and after any major precipitation event.

- Sediment deposits and debris will be removed from the channels and culverts as necessary and any erosion damage at the outfall (if any) will be repaired or controlled.

- Conduct inspections of the facility on a regular basis as part of the preventive maintenance site check. Such inspections will include the visual assessment of corroded or damaged drums and tanks, broken or breached containment structures, collapsed or clogged drainages or drain lines.

Implementation of the BMPs will prevent or mitigate impact to storm water runoff from this facility.

IX. INSPECTION, MAINTENANCE AND REPORTING

WFS's personnel will operate and maintain the compression unit at the facility. The facility will be manned and monitored 24hours per day onsite for equipment malfunctions. The facility equipment is visually inspected on a daily basis. The above ground and below-grade tanks will be gauged regularly, and monitored for leak detection.

In the event of a release of a reportable quantity, the operator reports the release to a WFS spill notification service. The service immediately notifies the WFS Environmental Department and all appropriate agencies.

X. SPILL/LEAK PREVENTION AND REPORTING (CONTINGENCY PLANS)

Spill containment berms around above ground storage tanks will be designed to contain 1-1/3 times the volume of the tank. The below-grade tanks will be constructed with a means of leak detection, and will either be double-bottomed tanks or a tank set on an impermeable pad.

WFS corporate policy and procedure for the controlling and reporting of Discharges or Spills of Oil or Hazardous Substances is provided in Appendix A. Significant spills and leaks are reported to the NMOCD pursuant to NMOCD Rule 116 and WQCC 1-203 using the NMOCD form (see Appendix B).

XI. SITE CHARACTERISTICS

The Kutz Canyon Plant is located approximately 3 miles south of Bloomfield, New Mexico. The site elevation is approximately 5,800 feet above mean sea level. The natural ground surface topography slopes downward toward the west. The maximum relief over the site is approximately 30 feet. Intermittent flow from the site will follow natural drainage west to Kutz Canyon Wash. Kutz Canyon Wash drains to the north into San Juan River. The San Juan River, approximately 4.3 miles to the northwest of the site, is nearest down-gradient perennial source of surface water at an elevation of approximately 5,380 feet.

A review of the available hydrologic data[1,2] for this area revealed that there are no water wells within a one-mile radius of the Kutz Canyon Plant. The water-bearing unit in the area is the Nacimiento Formation. This formation consists of a sequence of interbedded sandstone and mudstone. The estimated ground water depth at the site is 200 to 500 feet. The total dissolved solids concentration of area ground water is expected to range from 200 to 2,000 parts per million.

The 100-year 24-hour precipitation event at a regional weather station is 2.8 inches. This small amount of rainfall for the area should pose no flood hazards. Vegetation in the area consists predominantly of sagebrush and native grasses

Flood Protection: Surface water runoff from the area surrounding the site will be diverted around the facility into the natural drainage path.

XII. FACILITY CLOSURE PLAN

All reasonable and necessary measures will be taken to prevent the exceedence of WCQQ Section 3103 water quality standards should WFS choose to permanently close the facility. WFS will submit a detailed closure plan to the NMOCD prior to closure.

Generally, closure measures will include removal or closure in place of underground piping and other equipment. All wastes will be removed from the site and properly disposed in accordance with the rules and regulations in place at the time of closure. When all fluids, contaminants, and equipment have been removed from the site, the site will be graded as close to the original contour as possible.

Should contaminated soil be discovered, any necessary reporting under NMOCD Rule 116 and WQCC Section 1203 will be made and clean-up activities will commence. Post-closure maintenance and monitoring plans would not be necessary unless contamination is encountered.

▾ Document Body

1.0 PURPOSE AND SCOPE

1.1 To establish the policy and procedure for preventing, controlling and reporting of discharges or spills of oil or hazardous substances to the environment in accordance with Company practices and federal, state and local requirements, including Title 40 of the Code of Federal Regulations - Part 112 (Oil Pollution Prevention).

1.2 This document pertains to Company personnel, Company and non-company facilities. The spill prevention and control requirements in this Policy and Procedure are Federally mandated guidelines for oil pollution prevention. The Company policy is to also apply these standards, where appropriate, to facilities containing hazardous substances. This is a discretionary application of the standards; however, variations from the standards should be approved by the responsible Director.

2.0 CONTENTS

3.0 POLICY

3.1 GENERAL

3.1.1 All Company facilities which could discharge or spill, oil or hazardous substances which may affect natural resources or present an imminent and substantial danger to the public health or welfare including, but not limited to, fish, shellfish, wildlife, shorelines and beaches are subject to the provisions of this document.

3.1.2 Oil, for purpose of this document, means oil of any kind or in any form, including but not limited to petroleum hydrocarbon, fuel oil, Y grade, natural gas liquids, condensate, mixed products, sludge, oil refuse and oil mixed with wastes other than dredged spoil (earth and rock). LPG (propane, butane, ethane) is not considered to be oil.

3.1.3 Hazardous Substance, for purposes of this procedure, is defined as any chemical or

material that has or should have a Material Safety Data Sheet (MSDS); however, hazardous substances are further defined by the following environmental statutes:

a. Section 101(N) and Section 102 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)

b. Section 307(a) and Section 311(b)(2)(A) of the Clean Water Act

c. Section 3001 of the Solid Waste Act (excluding items suspended by Congress)

d. Section 112 of the Clean Air Act

e. Section 7 of the Toxic Substance Control Act

3.1.4 The term hazardous substance does not include petroleum hydrocarbon, including crude oil or any fraction thereof and the term does not include natural gas, natural gas liquids (including condensate), liquefied natural gas or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

3.1.5 Facilities which could discharge or spill, oil or hazardous substances into a watercourse must comply with the applicable federal, state or local laws and regulations. A discharge includes but is not limited to any spilling, leaking, pumping, pouring, emitting, emptying or dumping. A watercourse is any perennial or intermittent river, stream, gully, wash, lake or standing body of water capable of collecting or transporting an oil or hazardous substance.

3.1.6 Facilities which are subject to the requirements stated in this policy are as follows:

a. Non-Transportation Related Facilities

(1) Storage or drip tanks and other aboveground containers (excluding pressurized or inline process vessels) having a capacity in excess of 660 gallons for each single container or an aggregate capacity of 1,321 gallons or more for multiple containers.

(2) Underground storage facilities having a total capacity in excess of 42,000 gallons.

b. Transportation Related Facilities

(1) All vehicles, pipeline facilities, loading/unloading facilities and other mobile facilities which transport oil or hazardous substances.

3.1.7 Each Company location which has facilities subject to paragraph C.1.1 shall have a site specific Spill Prevention Control and Countermeasure Plan (SPCC Plan) which identifies all facilities subject to 40 CFR 112. The plan shall identify all oil and hazardous substance storage vessels (as defined in a.(1) above) at the facility and the spill prevention measures in place to control discharges or spills. This plan shall also identify all regulatory agencies that must be notified in case of a spill.

3.1.8 The facility superintendent is responsible for spill prevention. His/her duties include,

but are not limited to, the following:

a. Instructing personnel in the operation and maintenance of equipment to prevent the discharge of oil.

b. Conduct annual briefings for operating personnel at intervals frequent enough to assure adequate understanding of the Spill Plan at that facility.

c. Briefings should highlight and describe known discharges or spills and recently developed precautionary measures.

3.1.9 Each individual facility is checked annually by the superintendent or designee to determine the potential for discharges or spills of oil or hazardous substances in harmful quantities that violate water quality standards or which may cause a film, sheen or discoloration on the surface of water. All facilities which have the potential for discharging or spilling harmful quantities of oil or hazardous substances into a watercourse are required to have the following preventive measures:

a. Examination of all tanks, valves and fittings, at least annually, to determine any maintenance requirements.

b. All tank batteries should, as far as practicable, have a secondary means of containment for the entire contents of the largest single tank plus sufficient freeboard in the containment facility to allow for precipitation.

c. An annual monitoring and inspection program to prevent accidental spills or discharges into watercourses. This includes annual inspection for faulty systems and monitoring line valves and liquid pipelines for leaks or blowouts.

3.1.10 Any field drainage ditches, road ditches, traps, sumps or skimmers should be inspected at regular scheduled intervals for accumulation of oil or other hazardous substances which may have escaped from small leaks. Any such accumulations should be removed.

3.2 BULK STORAGE TANKS

3.2.1 A tank should not be used for storage of oil or hazardous substances unless the material and construction of the tank is compatible with the oil or substance stored and conditions of storage such as pressure and temperature. Buried storage tanks must be protected from corrosion by coatings, cathodic protection or other methods compatible with local soil conditions. Aboveground tanks should be subject to visual inspection for system integrity.

3.2.2 The facility superintendent should evaluate tank level monitoring requirements to prevent tank overflow.

3.2.3 Leaks which result in loss of oil or hazardous substances from tank seams, gaskets, rivets and bolts sufficiently large to cause accumulation of oil or hazardous substances in diked areas should be promptly corrected.

3.2.4 Mobile or portable oil or hazardous substances storage tanks should be positioned or located to prevent the contents from reaching a watercourse. The mobile facilities should be located so their support structure will not be undermined by periodic flooding or washout.

3.3 FACILITY DRAINAGE

3.3.1 Make provisions for drainage from diked storage areas where necessary in areas with high precipitation levels. Drainage from diked areas should be restrained by valves or other means to prevent a discharge or spill. Diked areas should be emptied by pumps or ejectors which are manually activated. Valves used for the drainage of diked areas should be of manual, open-and-closed design.

3.3.2 Rain water may be drained from diked areas providing drainage water does not contain oil or hazardous substances that may cause a harmful discharge. Drain valves must be closed following drainage of diked areas.

3.3.3 When possible, drainage systems from undiked areas should flow into ponds, lagoons or catchment basins designed to retain oil or hazardous substances or return the substances to the facility. Any drainage system which is not designed to allow flow into ponds, lagoons or catchment basins should be equipped with a diversion system that could, in the event of a discharge or spill, contain the oil or hazardous substances on the Site.

3.3.4 The principal means of containing discharges or spills is the use of dikes which are constructed wherever regulated quantities of oil or hazardous substances have the potential of reaching a watercourse. The construction of dikes must meet the following requirements:

a. Capacity must be at least equivalent to the storage capacity of the largest tank of the battery plus sufficient freeboard to allow for precipitation or displacement by foreign materials.

b. Small dikes for temporary containment are constructed at valves where potential leaking of oil or hazardous substances may occur.

c. Any dike three feet or higher should have a minimum cross section of two feet at the top.

3.3.5 Other means of containment or spill control include, but are not limited to:

a. Berms or retaining walls

b. Curbing

c. Culverting, gutters or other drainage systems

d. Weirs, booms or other barriers

e. Spill diversion ponds or retention ponds

f. Sorbent materials

3.4 TRANSFER OPERATIONS, PUMPING and IN-PLANT/STATION PROCESS

3.4.1 Aboveground valves and pipelines should be examined regularly by operating

personnel to determine whether there are any leaks from flange joints, expansion joints, valve glands and bodies, catch pans, pipeline supports, valve locks and metal surfaces.

3.5 FACILITY TANK CAR AND TANK TRUCK LOADING/UNLOADING RACK

3.5.1 Rack area drainage which does not flow into a catchment basin or treatment facility designed to handle spills should have a quick drainage system for use in tank truck loading and unloading areas. The containment system should have a maximum capacity of any single compartment of a truck loaded or unloaded in the station.

3.5.2 Aboveground piping that has potential for damage by vehicles entering the Site should be protected by logically placed warning signs or by concrete-filled pipe barriers.

3.5.3 Loading and unloading areas should be provided with an interlocked warning light, grounding shutdown, physical barrier system or warning signs to prevent vehicular departure before complete disconnect of flexible or fixed transfer lines. All drains and outlets of any truck should be closely examined for leakage prior to filling and departure. All drains and outlets that may allow leakage should be tightened, adjusted or replaced to prevent liquid leakage while in transit.

NOTE: LPG loading facilities and remote field loading of condensate are exempt from the C.5 requirements of this document.

4.0 PROCEDURE

4.1 Identifying, Containing and Initial Reporting of a Discharge or Spill of Oil or Hazardous Substance

Any Employee

4.1.1 Upon noticing a discharge or spill of an oil or hazardous substance in any quantity shall immediately contain the release (if safe to do so) and notify the facility superintendent, dispatcher or other designee. Releases must be reported to gas control in the following three circumstances:

I. The Following Situations Always Require IMMEDIATE Reporting to Gas Control:

1. Release reaches or may reach surface water: (pond, lake, wash or ground water

2. Release leaves Williams property

3. Release is of questionable nature (i.e., unknown product, unknown hazards)

II. Onsite Releases of Certain Common Industrial Materials Above 10 Gallon Threshold Are Reportable.
Releases that do not migrate off-site or reach surface water may require reporting as well. All releases of 10 gallons or greater of the following materials should be contained and promptly reported to Gas Control:

- Ammonia
- Antifreeze
- Amine

- Chromate Mixtures
- Condensate
- Glycol
- Lube Oil
- Methanol
- Sulfuric Acid
- Sodium Hydroxide
- Natural Gas Liquids
- Other Hydrocarbon Products
- Natural Gas (1 MMSCF)

III. Releases of Certain Other Materials Reportable:

Releases of the following materials above the indicated amount should be reported to gas control:

- PCB's (Concentration > 50 ppm) - any amount
- Mercaptan (Ethyl Mercaptan) - 1 lb.
- Mercury - 1 lb.
- Hydrogen Sulfide - 100 lbs.
- Pesticides - 1 lb.
- Other Material Not Listed - 1 lb.

NOTE 1: A release includes material released (intentionally or unintentionally) to air, water or soil. When notifying Gas Control of a Release, be prepared to provide information on the type of material spilled, amount released, weather conditions, time and date of release, person discovering release and measures taken to control the release.

NOTE 2: Refer to Attachment A for containment procedures.
Facility Superintendent, Controller or Designee

4.1.2 Contacts Gas Control immediately by telephone and provides the following information:

a. Name of company facility and/or location of facility and nature of discharge or spill

b. Description and quantity of emission or substance discharged

c. Description of the circumstances causing the discharge or spill

d. Name, title and telephone number of person initially reporting the discharge or spill and person reporting to Gas Control

e. Action taken or being taken to mitigate and correct discharge or spill

f. Water bodies or streams involved

g. Time and duration of discharge or spill

h. Outside involvement during discharge or spill (public government agencies, etc. See Emergency Operating Procedure Manuals)

Gas Control Personnel

4.1.3 Advises Environmental Affairs departments immediately by telephone concerning the incident including any incidents reported by persons not employed with the Company.

NOTE: If Gas Control is contacted by a person not employed with the Company, the necessary information is obtained as indicated in D.1.2 and the Superintendent and Environmental Affairs are immediately contacted to begin containment and clean-up of the discharge or spill.

4.1.4 If Environmental Affairs cannot be contacted, notifies Director over Environmental Affairs.

Facility Superintendent

4.1.5 Coordinates containment and clean-up of discharge or spill, keeping the responsible Director Informed.

4.1.6 Coordinates containment and clean-up of discharge or spill, keeping the responsible Director Informed. If the discharge or spill is too large for Company personnel to contain, contacts qualified local contractors for assistance. (See Emergency Operating Procedure Manuals tab #11, contractors with available equipment and services).

4.1.7 Advises Environmental Affairs by telephone if emergency containment or clean-up assistance from a state agency or a response team from the U.S. Coast Guard is required.

Environmental Affairs

4.1.8 Assesses reporting requirements to state and federal agencies (contacts Legal Department and Right-of-Way Department, if appropriate). (See Emergency Operating Procedure Manuals).

4.1.9 Makes appropriate contacts with National Response Center and state and local agencies, when necessary.

4.1.10 If spill is significant, dispatches Environmental Specialist to scene to oversee cleanup and reporting responsibilities.

4.2 SUBMITTING WRITTEN NOTIFICATION OF A DISCHARGE OR SPILL

Facility Superintendent or Designee

4.2.1 Completes a written description of the incident as soon as possible after initial notification is given, which should include the following:

a. Time and date of discharge or spill

b. Facility name and location

c. Type of material spilled

d. Quantity of material spilled

e. Area affected

f. Cause of spill

g. Special circumstances

h. Corrective measures taken

i. Description of repairs made

j. Preventative measures taken to prevent recurrence.

4.2.2 Forwards the completed written description to Environmental Affairs. Retains a copy for future reference.

NOTE: Environmental Affairs, in coordination with the Legal Department, if necessary, submits written reports to government agencies.

ATTACHMENT A
DISCHARGE OR SPILL CONTAINMENT PROCEDURES AND MATERIALS

TYPE OF FACILITY WHERE THE DISCHARGE OR SPILL OCCURS	CONTAINMENT PROCEDURES	MATERIALS USED FOR CONTAINMENT
A. Oil Pipeline (as defined in C.1.4)	1. Closes appropriate block valves. 2. Contains Discharge or spill by: Ditching covering, applying sorbents, constructing an earthen dam or burning. 3. If burning is required, obtains approval from the appropriate state air quality control government agencies before burning.	1.Straw 2.Loose Earth 3.Oil Sorbent 3M Brand 4.Plain Wood chips 5.Sorb-Oil Chips Banta Co. 6.Sorb-Oil Swabs Banta Co. 7.Sorb-Oil Mats Banta Co. 8.Or Equivalent Materials
B. Vehicle	1. Contains discharge or spill by: ditching, covering surface with dirt, constructing earthen dams, apply sorbents or burning. 2. Notifies immediately Environmental Affairs and if there is any imminent danger to local residents; notifies immediately the highway patrol or local police officials.	

	3. If burning is required, obtains approval from the appropriate state air quality control government agencies before burning. Note: Any vehicle carrying any hazardous or toxic substance will carry a shovel or other ditching device to contain a spill. If the vehicle has sufficient room, sorbent materials should also be carried.	
C. Bulk Storage Tanks or any other Facilities	1. Contains discharge or spill by: ditching, covering, applying sorbents, constructing an earthen dam or burning. 2. If burning is required, obtains approval from the appropriate state air quality control government agencies before burning.

PO Box 308
Window Rock AZ 86515

Dear Madam/Sir:

This letter is to advise you that Williams Field Services Company is preparing to submit to the Oil Conservation Division a Discharge Plan Renewal application for the permitted Kutz Canyon Plant (GW-045). This notice is a requirement pursuant to New Mexico Water Quality Control Commission Regulations. We expect to submit the Discharge Plan Renewal application to the Oil Conservation Division during February 2003.

The facility, located in Section 13, Township 28 North, Range 11 West, NMPM, San Juan County, New Mexico, provides natural gas compression and conditioning services.

The discharge permit addresses how spills, leaks, and other accidental discharges to the surface will be managed. The facility does not discharge wastewater to surface or subsurface waters. All wastes generated will be temporally stored in tanks or containers with secondary containment. Waste shipped offsite will be disposed or recycled at an OCD approved site. In the event of an accidental discharge, ground water most likely will not be affected because the estimated ground water depth at the site is 100-300 feet. The total dissolved solids concentration of area ground water is expected to range from 200 to 2,000 parts per million.

Comments or inquiries regarding this permit or the permitting process may be directed to:

Director of the Oil Conservation Division
1220 South Saint Francis Dr.
Santa Fe NM 87505

Respectfully submitted,

Clara M. Garcia
Environmental Compliance

Bloomfield, New Mexico 87413

RE: Discharge Plan Renewal Notice for Williams Field Services Facilities

Dear Mr. Lane:

The OCD is providing Williams Field Services a notice that the following discharge plans expire at various dates during the year 2003.

GW-292 expires 3/4/2003 – Rosa #1 Compressor Station
GW-293 expires 3/4/2003 - Gallegos Compressor Station
GW-133 expires 4/15/2003 – SJ 30-8 #1 CDP Compressor Station
GW-134 expires 4/15/2003 - Decker Junction Compressor Station
GW-136 expires 4/15/2003 - SJ 29-7 #1 CDP Compressor Station
GW-45 expires 6/28/2003 - Kutz Gas Plant
GW-306 expires 7/9/2003 - Trunk N Compressor Station
GW-149 expires 10/8/2003 El Cedro Compressor Station
GW-155 expires 12/13/2003 Aztec CDP Compressor Station

WQCC 20.6.2.3106.F. If the holder of an approved discharge plan submits an application for discharge plan renewal at least 120 days before the discharge plan expires, and the discharger is not in violation of the approved discharge plan on the date of its expiration, then the existing approved discharge plan for the same activity shall not expire until the application for renewal has been approved or disapproved. A discharge plan continued under this provision remains fully effective and enforceable. An application for discharge plan renewal must include and adequately address all of the information necessary for evaluation of a new discharge plan. Previously submitted materials may be included by reference provided they are current, readily available to the secretary and sufficiently identified to be retrieved. [12-1-95]

The discharge plan renewal application for each of the above facilities is subject to WQCC Regulation 20.6.2.3114. Every billable facility submitting a discharge plan renewal will be assessed a fee equal to the filing fee of $100.00 plus a flat fee based upon the horsepower rating or type of facility for gas processing facilities. The $100.00 filing fee for each facility is to be submitted with the discharge plan renewal application and is nonrefundable.

Please make all checks payable to: **NMED-Water Quality Management** and addressed to the OCD Santa Fe Office. Please submit the original discharge plan renewal application and one copy to the OCD Santa Fe Office and one copy to the OCD Aztec District Office. **Note that the completed and signed application form must be submitted with your discharge plan renewal request.** (Copies of the WQCC regulations and discharge plan application form and guidelines are enclosed to aid you in preparing the renewal application. A complete copy of the regulations is also available on OCD's website at **www.emnrd.state.nm.us/ocd/**).

If any of the above sited facilities no longer has any actual or potential discharges and a discharge plan is not needed, please notify this office. If the Williams Field Services has any questions, please do not hesitate to contact Mr. W. Jack Ford at (505) 476-3489.

Sincerely,

Roger C. Anderson

RE: Site Modification Notification
GW-045, Kutz Gas Plant
San Juan County, New Mexico

Dear Mr. Bareta:

The OCD has received the site modification letter, dated December 19, 2001, from Williams Field Services for the Kutz Gas Plant GW-045 located in SW/4 of Section 12, NW/4 of Section 13, Township 28 North, Range 11 West, NMPM, San Juan County, New Mexico. **The site modifications are approved without modification to the discharge plan with the stipulation that all modifications comply with the discharge plan renewal approved May 15, 1998.**

Please note that Section 3104 of the regulations requires that **"When a plan has been approved, discharges must be consistent with the terms and conditions of the plan."** Pursuant to Section 3107.C Williams Field Services is required to notify the Director of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume. Further, this approval does not relieve Williams Field Services from liability should operations result in contamination to the environment.

Sincerely,

W. Jack Ford, C.P.G.

Re: **Kutz Plant (GW-045) Discharge Plan Modification**

Dear Mr. Ford:

Please be advised that two – 90,000 gallon propane storage tanks are being converted to methanol storage tanks. An impermeable containment will be constructed to contain at least 133% of the tank capacities. The tank locations are highlighted on attached facility plot plan. Please make note of this change in the facility's Discharge Plan.

If you have any questions or require additional information, I can be reached at (505) 632-4634.

Sincerely,

Mark J. Bareta
Senior Environmental Specialist

Re: Inspection Report
Williams Field Services
GW-045, Kutz Canyon Gas Plant
San Juan County, New Mexico

Dear Ms. Deklau:

The New Mexico Oil Conservation Division (OCD) conducted an un-announced inspection of the Kutz Canyon Gas Plant on July 7, 1999. OCD would like to thank Mr. David Sanders and the various plant personnel for their cooperation during the inspection. Comments from the inspection conducted are as follows:

1. *Drum Storage: All drums that contain materials other than fresh water must be stored on an impermeable pad (i.e. concrete, asphalt, or other suitable containment) with curbing and be labeled for contents. All Empty drums should be stored on their sides with the bungs in and lined up on a horizontal plane. Chemicals in other containers such as sacks or buckets should also be stored on an impermeable pad with curbing.*

   Drums containing fluids were were not properly stored in the building containing the absorbent sock and pad collection tank. Drums were not properly labeled. Plant personnel need to be instructed on the proper storage of empty drums. (Photo #5)

   All drums should be clearly labeled to identify their contents and other emergency information necessary if they were to rupture, spill, or ignite.

2. *Above Ground Tanks: All above ground tanks which contain fluids other than fresh water must be bermed to contain a volume of one-third more than the total volume of the largest or all interconnected tanks. All new tanks or existing tanks that undergo a major modification, as determined by the Division, must be placed within an impermeable bermed enclosure.*

The above ground tanks that show evidence of some spill/leakage will be inspected on a regular basis in order to prevent leakage from the containment structures.

3. *Labeling: All tanks, drums and containers will be clearly labeled to identify their contents and other emergency information.*

All drums should be clearly labeled to identify their contents and other emergency information necessary if they were to rupture, spill, or ignite.

4. *Process areas: All process and maintenance areas which show evidence that leaks and spills are reaching the ground surface must be either paved and curbed or have some type of spill collection device incorporated into the design.*

Piping and connection joints show evidence of leaks that have spilled onto the ground surface at Kutz #1 and at the oil/water separator. Some type of collection device should be provided to prevent the spillage onto the ground surface. Evidence of spillage was in the process of cleanup at the time of inspection. (Photos #1 & #2)

Sumps around the Kutz #1 compressor building contained trash and fluids which appeared to be free used oil and water. These fluids and trash need to be removed and disposed of properly. A method of collection for leaking used oil should be developed to prevent the used oil fluids from draining into these outside sump areas.

5. *Waste Disposal:*

The evaporation pond had 95% coverage of an oil emulsion across the surface of the pond. Pumping of this emulsion was underway at the time of the inspection. The presence of the oil emulsion on the surface of the evaporation pond must be eliminated. It is OCD's understanding that a heated oil/water separator will be used to eliminate the emulsion problem. This problem is a high priority requirement. (Photos #3 & #4)

The storage of used oil absorbent pads and socks during the drying and drainage process is being misused for trash depositing. The collection tank should have only the appropriate material within the collection tank. Drums, cardboard boxes, cans, buckets were observed to be deposited within the drainage tank in violation of disposal requirements. (Photo #6)

6. *Housekeeping: All systems designed for spill collection/prevention will be inspected weekly and after each storm event to ensure proper operation and to prevent overtopping or system failure. A record of inspections will be retained on site for a period of five years.*

Plant personnel should be trained to observe for general housekeeping of the facility to prevent unwanted spills and leaks, unwanted trash in sumps and around equipment.

7. *Spill Reporting: All spills/releases shall be reported pursuant to OCD Rule 116 and WQCC 1203 to the appropriate OCD District Office.*

Plant personnel should be instructed to promptly report any spills and leaks so that proper reporting and remedial action can be initiated.

Once again, OCD would like to thank the plant personnel for their time during our recent visit to your facilities, and for your commitment to operate in an environmentally conscience manner. If you have any questions, please call me at (505) 827-7156.

Sincerely,

W. Jack Ford, C.P.G.

OPEN DRAINS TESTING PROCEDURES

Test #1

A) Plug the inlet to the API Separator.
B) Plug the outlet to collection box #2.
C) Plug the outlet to collection box #1.
D) Plug outlet of VLR collection box.
E) Start filling the system with water until water start to come out of drains at tank #3, Start treater, K2 glycol dehydrator and plug these drains as soon as the line is filled. Note: Water will continue to fill the K2 open drain system until it reaches the main header system in the process area.

F) Plug all plant process area drains.
Note: Water will continue to fill the system from the open drain at the highest point elevation (Fuel gas scrubber for K-building) until this system is full.
G) As soon as the system is full a water column (standpipe) will be attached to this drain. (hi point) and filled with water to 35" of water and monitored for 1 hour with no drop in level (Record test data).

Test #2

A) Plug the 12" inlet to collection box #2.
B) Plug all the drains in the R-G building.
C) Plug the drain to control room sink at K2.
D) Start filling water into the open drains at the maintenance shop. (hi point elevation)
Note: As water fills the drain lines monitor the open drains in the maintenance shop.
E) When the system is full, attach a water column (stand pipe) 35" of water to the drain in the maintenance shop. Fill to 35" of water and monitor with no loss in level for 1 hr. (Record test data).

Test #3

A) Plug the 2" inlet of collection box #2.
B) Plug one drain inside K-building.
C) Start filling water into the other drain at K-building.
D) When the drain gets full of water. Hook up the water column (stand pipe) and fill to 35" of water and monitor the level for 1 hour without loss of level. (Record test data).

Test #4

A) Install plug in the 2" inlet to collection box #2 from the EG system.
B) Install plug in the drains at the condensate tank drain.
C) Install a plug at the EG separator/exchanger area drain.
D) Fill water into the drain at the EG System (dehydrator O.H. separator drain until system is full.
E) Connect water column (standpipe) fill to 35" of water column and monitor level for 1 hour with no loss of level.

Test #5

A) Plug the 6" inlet to collection box #1.
B) Plug the outlet or over fill line at the cooling tower.
C) Plug all drains in the lean oil pump house.
D) Plug drains at the Iron Sponge units.
E) Start filling the system.
F) As the lines start to fill up and you get water coming out the K1 plant area drains.
G) Plug all open drains at the north Clark building.
H) The high point elevation and filling point will be at K1 inlet meter run area. Plug all drains including Marley Cooling Tower drain and inlet separator. Continue to fill until high point drain is full.
I) Attach water column (standpipe) and fill to 35" of water column. Monitor level without the loss of level for 1 hour. Record test data.

Test #6

A) Install plug in the outlet drain line from the fire pump house to the R& G drain.
B) Fill fire pump drain with water.
C) Install water column (standpipe) to this drain to 35" of water column for 1 hour without loss of level. Record test data.

Test #7

A) Plug the inlet into the pond.
B) Plug the 12" outlet from the API separator.
C) Plug the outlet from the wastewater storage tank.
D) Start filling the system from the cooling tower bleed line at K1 lean oil pump house.
E) Open the drain at the utility water sand filter until water comes out and then plug this line.
F) When the drain at the Cooling Tower bleed meter to the pond gets full, attach the water column (standpipe). Fill to 35" of water column and monitor for 1 hour without loss of level. Record test data.

Williams – Kutz Plant
6/1/98
M. Smith

Alternate Test Procedure for Test #1

Note: During Test #1, as we were filling the system we discovered that the rubber boot connecting the pipes together started to leak when we got the system almost full. The plug began to leak also due to the elevation from the high point test area to the inlet of the API (approx. 60' drop in elevation). We discontinued filling and drain the water from the system and install a dress coupling on the inlet to the API and one (1) on the 4" coming from K2 plant. The following will be the alternate test procedures: Test #1A, main 12" header, Test #1B Kutz 2 plant area, Test #1C, K-building.

Test #1A

A) Install a plug into the inlet of the API separator.
B) Install a plug into the outlet of the #2 collection box.
C) Install a plug into the outlet of the #1 collection box.
D) Install a plug into the outlet of the VLR collection box.
E) Install a plug into the outlet of the K2 4" drain at the dresser coupling.
F) Install a plug into the drain tank #3 and a plug at the salt treater drain.
G) Start filling the system with water at the #2 collection box. (Plug is drilled and topped with a valve for testing).
H) As soon as system is full. Hook up test equipment (standpipe) water column at the high point in elevation. Fill water column to 35" of water and monitor for 1 hour without any drop in level (record test data).

Test #1B

A) Install plug into the outlet 4" dresser-coupling outlet from K2.
B) Install plugs into all K2 process area drains, including the K2 glycol dehydrator drain.
C) Install a pneumatic plug into 4" drain from K-building.
D) Start filling system with water at the high point in elevation (K2 treated gas separator drain).
E) As soon as the system is full of water, install the test equipment (water column) stand pipe and fill to 35" of water and test for 1 hour without any drop of water level. (Record test data).

Test #1C

A) Install pneumatic plug into line coming from K-building to K2 plant area (plug install through clean out into line).
B) Install plug into drain line out of Marley Cooling Tower.
C) Install plug into the drain at the K2 refrigerant surge tank.
D) Start filling system into the drain at the K-building fuel gas scrubber drain.
E) As soon as the system is full of water, install test equipment (water column) and fill to 35" of water column and test for 1 hour without any drop in water level. Record test data.

WILLIAMS - KUTZ PLANT
OPEN DRAIN SYSTEM TEST REPORT

TEST#: 4 **DATE**: MAY 11, 1998

TIME TEST STARTED: 9:00 a.m. **TIME ENDED**: 10:00 a.m.

PERSON PERFORMING TEST: MIKE SMITH

WITNESS OF TEST: THOMAS H. MARTINEZ, CF&M

SIGNATURE OF WINESS:

RESULTS OF TEST:
Tested with 35" of water column. With no drop in water level.

s:\forms\opendrain.xls

WILLIAMS - KUTZ PLANT
OPEN DRAIN SYSTEM TEST REPORT

TEST#: 5 **DATE**: APRIL 17, 1998

TIME TEST STARTED: 4:00 p.m. **TIME ENDED**: 5:00 p.m.

PERSON PERFORMING TEST: MIKE SMITH

WITNESS OF TEST: RANDY BIBLE, CF&M

SIGNATURE OF WINESS:

RESULTS OF TEST:
We tested the system with 35" of water column with no loss of water.

We disconnected the lean oil pump house from this test and will replace piping and test this part at a later date.

s:\forms\opendrain.xls

WILLIAMS - KUTZ PLANT
OPEN DRAIN SYSTEM TEST REPORT

TEST#: 5 **DATE**: MAY 27, 1998

TIME TEST STARTED: 2:00 p.m. **TIME ENDED**: 3:00 p.m.

PERSON PERFORMING TEST: MIKE SMITH

WITNESS OF TEST: RANDY BIBLE, CF&M

SIGNATURE OF WINESS:

RESULTS OF TEST:
We tested the lean oil pump house. Drained after replacing with new 4" pvc pipe sch. 40.

Tested system with 35" of water column with no loss of water level.

s:\forms\opendrain.xls

WILLIAMS - KUTZ PLANT
OPEN DRAIN SYSTEM TEST REPORT

TEST#: 6 **DATE**: MAY 6, 1998

TIME TEST STARTED: 10:40 a.m. **TIME ENDED**: 2:40 p.m.

PERSON PERFORMING TEST: MIKE SMITH

WITNESS OF TEST: THOMAS H. MARTINEZ, CF&M

SIGNATURE OF WINESS: 

RESULTS OF TEST:
Tested with 67" of water column with no drop in level for 4 hrs.

Test passed.

s:\forms\opendrain.xls

WILLIAMS - KUTZ PLANT
OPEN DRAIN SYSTEM TEST REPORT

TEST#: 7 **DATE**: APRIL 1, 1998

TIME TEST STARTED: x **TIME ENDED**: x

PERSON PERFORMING TEST: x

WITNESS OF TEST: x

SIGNATURE OF WINESS: J M Smith

RESULTS OF TEST:
Cannot be tested due to the water level is over the outlet into the pond.
Will test as soon as levels permit.

s:\forms\opendrain.xls

WILLIAMS - KUTZ PLANT
OPEN DRAIN SYSTEM TEST REPORT

TEST#: 7 **DATE**: JULY 23, 1998

TIME TEST STARTED: 12:15 p.m. **TIME ENDED**: 1:30 p.m.

PERSON PERFORMING TEST: M. SMITH & T. MARTINEZ

WITNESS OF TEST: MIKE SMITH

SIGNATURE OF WINESS: 
RESULTS OF TEST:
Tested with 75" of water column without any drop in level for 1 hr. & 15 min.

This test was postponed due to nigh level in pond covering the outlet nozzle into the pond.

NOTICE OF PUBLICATION

STATE OF NEW MEXICO ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT OIL CONSERVATION DIVISION

Notice is hereby given that pursuant to New Mexico Water Quality Control Commission Regulations, the following discharge plan application(s) have been submitted to the Director of the Oil Conservation Division, 2040 South Pacheco, Santa Fe, New Mexico 87505, Telephone (505) 827-7131:

(GW-045) - Williams Field Services, Ingrid A. Deklau, (801) 584-6543, P.O. Box 58900, Salt Lake City, Utah 84158-0900, has submitted a discharge plan renewal application for the Williams Field Services Kutz Canyon Gas Plant facility located in the SW/4 of Section 12, NE/4 of Section 13, SE/4 of Section 14, Township 28 North, Range 13 West, NMPM, San Juan County, New Mexico. Approximately 4,200 gallons of process waste water is disposed of in an OCD approved double lined evaporation pond with leak detection. The total dissolved solids (TDS) of the waste water is approximately 1,500 milligrams per liter (mg/l). Ground water most likely to be affected in the event of an accidental discharge at the surface is shallow perched water with TDS concentrations ranging from 8,000 to 18,000 mg/l. Deeper ground water is at a depth of 200 feet with estimated total dissolved solids concentration ranging from 2,000 to 4,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

(GW-134) - Williams Field Services, Ingrid A. Deklau, (801) 584-6543, P.O. Box 58900, Salt Lake City, Utah 84158-0900, has submitted a discharge plan renewal application for the Williams Field Services Decker Junction C.D.P. compressor station facility located in the SE/4 of Section 19, Township 30 North, Range 18 West, NMPM, San Juan County, New Mexico. Approximately 1,500 gallons per day of process and waste water is collected in steel storage tanks then transported offsite for disposal. Ground water most likely to be effected in the event of an accidental discharge is at an estimated depth of 30 feet with a total dissolved solids concentration of approximately 2,000 mg/l. The discharge plan addresses how spills, leaks, and other accidental discharges to the surface will be managed.

Any interested person may obtain further information from the Oil Conservation Division and may submit written comments to the Director of the Oil Conservation Division at the address given above. The discharge plan application(s) may be viewed at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday. Prior to ruling on any proposed discharge plan application(s), the Director of the Oil Conservation Division shall allow at least thirty (30) days after the date of publication of this notice during which comments may be submitted and a public hearing may be requested by any interested person. Requests for a public hearing shall set forth the reasons why a hearing should be held. A hearing will be held if the Director determines there is significant public interest.

If no public hearing is held, the Director will approve or disapprove the proposed plan(s) based on information available. If a public hearing is held, the Director will approve the proposed plan(s) based on the information in the discharge plan application(s) and information submitted at the hearing.

GIVEN under the Seal of New Mexico Oil Conservation Commission at Santa Fe, New Mexico, on this 30th day of March 1998.

Re: Notice of Publication

Dear Sir/Madam:

Please publish the attached notice one time immediately on receipt of this request. Please proofread carefully, as any error in a land description or in a key word or phrase can invalidate the entire notice.

Immediately upon completion of publication, please send the following to this office:

1. ***Publisher's affidavit in duplicate.***
2. ***Statement of cost (also in duplicate).***
3. ***Certified invoices for prompt payment.***

We should have these immediately after publication in order that the legal notice will be available for the hearing which it advertises, and also so that there will be no delay in your receiving payment.

Please publish the notice no later than April 7, 1998.

Sincerely,

Sally Martinez
Administrative Secretary

Re: Discharge Plan Renewal, Williams Field Services Kutz Canyon Gas Plant (GW-045)

Dear Mr. Ford:

Enclosed you will find a copy of the continuation to Table 2 of the Kutz Canyon Gas Plant Discharge Plan renewal that I just mailed to you yesterday. (I accidentally left it out since it is saved under another file name). Please insert this table into my March 24, 1998 submittal. I apologize for the inconvenience.

Please call me at (801)-584-6543 if there are any questions.

Sincerely,

Ingrid Deklau
Environmental Specialist

Re: OCD Discharge Plan Renewal: Kutz Canyon Gas Plant (GW-045)

Dear Mr. Ford:

Enclosed, please find Check Number 80587 for $50 to cover the application fee for the Discharge Plan Renewal of Williams Field Services (WFS) Kutz Canyon Gas Plant (GW-045). The information attached serves to summarize and update the original discharge plan that was submitted to the OCD on December 21, 1987. For your information, the complete list of documents which constitute the Kutz Canyon Gas Plant Discharge Plan are listed below.

March 25, 1998	WFS application for renewal
February 6, 1998	OCD request for renewal
August 19, 1996	OCD approval of modification
August 1996	WFS application for modification
July 30, 1993	Sunterra transmittal of fees
July 27, 1993	Sunterra application for exception
June 28, 1993	OCD approval of renewal
April 14, 1993	PNM application for renewal
January 27, 1993	OCD request for renewal
November 19, 1990	OCD approval of modification
November 8, 1990	Sunterra application for modification
April 18, 1988	OCD approval of application
April 7, 1988	Sunterra response to OCD
January 22, 1988	OCD request for additional information
December 21, 1987	Sunterra Application

If you have any questions, I can be reached at (801) 584-6543. Your assistance in handling these matters is appreciated.

Sincerely,

Ingrid A. Deklau
Senior Environmental Specialist

DISCHARGE PLAN APPLICATION FOR SERVICE COMPANIES, GAS PLANTS, REFINERIES, COMPRESSOR, AND CRUDE OIL PUMP STATIONS

(Refer to the OCD Guidelines for assistance in completing the application)

☐ New ☒ Renewal ☐ Modification

1. Type: Natural Gas Plant
2. Operator: Williams Field Services - Kutz Plant
   Address: 295 Chipeta Way Salt Lake City UT 84108
   Contact Person: Ingrid Deklau Phone: 801-584-6543
3. Location: SW /4 Section 12 ~~SE~~ Section NW/4 Section 13 Township 28 N Range 11 W
   Submit large scale topographic map showing exact location.
4. Attach the name, telephone number and address of the landowner of the facility site.
5. Attach the description of the facility with a diagram indicating location of fences, pits, dikes and tanks on the facility.
6. Attach a description of all materials stored or used at the facility.
7. Attach a description of present sources of effluent and waste solids. Average quality and daily volume of waste water must be included.
8. Attach a description of current liquid and solid waste collection/treatment/disposal procedures.
9. Attach a description of proposed modifications to existing collection/treatment/disposal systems.
10. Attach a routine inspection and maintenance plan to ensure permit compliance.
11. Attach a contingency plan for reporting and clean-up of spills or releases.
12. Attach geological/hydrological information for the facility. Depth to and quality of ground water must be included.
13. Attach a facility closure plan, and other information as is necessary to demonstrate compliance with any other OCD rules, regulations and/or orders.
14. CERTIFICATION

I herby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

NAME: Ingrid Deklau Title: Environmental Specialist

Signature: Ingrid Deklau Date: 3/24/98

I. NAME OF FACILITY AND TYPE OF OPERATION

The Kutz Gas Processing Plant (GW-045) removes ethane and higher hydrocarbons from field natural gas. The hydrocarbons that are removed are marketed in several places. The residual natural gas is also marketed by another company. The Plant was purchased by Williams in 1995. The plant was owned by Sunterra between 1986 and 1995. Prior to that time, the Plant was owned by Southern Union Company.

II. LEGALLY RESPONSIBLE PARTY

Williams Field Services
295 Chipeta Way
P.O. Box 58900, M.S. 2G1
Salt Lake City, Utah 84158-0900
(801) 584-6543

Contact Person:
Ingrid A. Deklau, Sr. Environmental Specialist
Phone and Address, Same as Above

III. LOCATION OF FACILITY

The Kutz Gas Processing Plant (GW-045) is located in the SW/4 of Section 12, NW/4 of Section 13, Township 28 North, Range 11 West, in San Juan County, New Mexico, approximately 2 miles south of Bloomfield, New Mexico. The Plant site covers approximately 22 acres.

IV. LANDOWNER

Bureau of Land Management
1235 Laplata Highway
Farmington, NM 87401
505-599-8900

V. FACILITY DESCRIPTION

The Plant was originally constructed in 1949. The Plant consists of two different extraction systems to remove ethane and higher hydrocarbons from field natural gas. The Kutz #1 Processing Unit was built in 1949 with a designed unit capacity for 120 million cubic feet of gas per day using a refrigerated oil absorption process. An upgrade and a new extraction system, the Kutz #2 Processing Unit, was added in 1976. The Kutz #2 unit was designed for a cryogenic process and has a capacity of approximately 80 mmcf/d. Both units are currently active. The hydrocarbons that are removed are marketed in several places. The residual natural gas is also marketed by another company.

A more detailed description of the processes can be found in the December 21, 1987 OCD Discharge Plan submitted by Sunterra. Planned process changes described in the December 21, 1987 application that have been implemented include the following:

- All wastewater from the floor drains is sent to a collector box and then routed through an oil water separator to remove any oil. The water from the separator is directed to the evaporation pond, and the oil is hauled by a used oil recycler.

- The Kutz #2 sink drain is connected into the collector.

- The double-lined evaporation pond with leak detection has been installed.

Additionally, the plant recently eliminated the use ofDiethanolamine at the facility. The plant now uses a Methyldiethanolamine-based product.

VI. SOURCE, QUANTITY, AND QUALITY OF EFFLUENTS AND WASTE SOLIDS

TABLE 1
SOURCE, QUANTITY, AND QUALITY OF EFFLUENT AND WASTE SOLIDS
KUTZ CANYON GAS PLANT

PROCESS FLUID/WASTE	SOURCE	QUANTITY	QUALITY
Used Oil	Compressors, engines, oil water separator	500 gal/mo	Used motor oil with no additives
Filter Separator Liquids	Filter Separator	3000 gal/mo	Water and hydrocarbon mixture with no additives
Flare Separator Liquids	Flare Separator	300 gal/mo	Liquid hydrocarbons with traces of glycol and amine with no additives
Used Solvent (stoddard type)	Parts Washer	300 gal/yr	No additives, petroleum-based solvent
Used process filters (i.e., glycol, amine, lean oil, etc.)	Dehydrators, CO2 removal, hydrocarbon removal	630/yr	No additives
Oil Filters	Compressors and engines	550/yr	No additives
Used Iron Sponge	H2S treatment	600 bushels/yr	No additives
Used Carbon	From amine system	4500 lb/yr	No additives
Used Mole Sieve	Used in removal of water from natural gas stream	23,000 lb/yr	No additives
Spill Residue	Incidental spills, leaks, or cleanup	Incident dependent	Incident dependent
Used Absorbents	Incidental spills, equipment clean-up	Incident dependent	Incident dependent
Liquid Effluent from Processing Plant (wastewater)	Cooling tower, filter separator, open drain system/ washdown water, produced water, Kutz 2 control room sink, iron sponge process water, oil water separator	1.3 million gal/yr	High TDS water, dissolved salts, traces of glycol/oil

VII. TRANSFER, STORAGE, AND DISPOSAL OF PROCESS FLUIDS, EFFLUENTS AND WASTE SOLIDS

TABLE 2
TRANSFER, STORAGE, AND DISPOSAL OF EFFLUENTS, AND WASTE SOLIDS
KUTZ CANYON GAS PLANT

PROCESS FLUID/WASTE	SOURCE	STORAGE	CONTAINER CAPACITY** (approximate)	CONTAINMENT/ SPILL PREVENTION	RCRA STATUS	DESCRIPTION OF FINAL DISPOSITION
Used Oil	Compressors, engines, oil water separator	AST* (tank 40)	2000 gal	Concrete berm	Non-exempt	Transported to EPA-registered used oil marketer for recycling.
Filter Separator Liquids	Filter Separator	AST* (tank 3)	2,200 gal	Berm	Exempt	Saleable product.
Flare Separator Liquids	Flare Separator	AST* (tank 30)	2,200 gal	Berm	Exempt	Saleable condensate will be transported by purchaser to their refinery.
Used Solvent	Parts Washer	AST* (tank 41)	170 gal	Berm	Non-exempt	Mixed with waste oil and hauled by used oil recycler.
Used process filters (i.e., glycol, amine, lean oil, etc.)	Dehydrators, CO2 removal, hydrocarbon removal	Roll off bin for special waste	Dumpster	N/A	Exempt	Drained and transported to approved disposal facility.
Oil Filters	Compressors, engines	Roll off bin for special waste	Dumpster	N/A	Non-exempt	Drained and transported to approved disposal facility.
Process Treatment Waste (i.e., carbon, mole sieve, etc.)	Gas treatment	N/A	N/A	N/A	Exempt	Dried on-site prior to disposal at approved disposal facility.
Spill Residue (i.e., soil, gravel) or other exempt waste	Incidental spills, leaks, or cleanup	N/A	N/A	In-situ treatment, landfarm, or alternate method	Incident dependent	Landfarmed on-site or disposed at OCD-approved facility (free liquid will be removed from residue, i.e., pumping, solidification, evaporation). On-site treatment will be conducted per applicable NMOCD Guidelines.
Used Absorbents	Incidental spills, leaks, or cleanup	Roll off bin for special waste	Dumpster	N/A	Non-exempt	Drained and transported to approved disposal facility.
Liquid Effluent from processing plant (wastewater)	Cooling tower, filter separator, open drain system/ washdown water, produced water, Kutz 2 control room sink, iron sponge process water, oil water separator	Evap pond	N/A	Double-lined pond with leak detection	Non-exempt	Liquids pass through oil water separator, then directed to evaporation pond
Scrap metal	Facility-wide, incident dependent	Boneyard	N/A	N/A	N/A	Hauled by recycler, reused on site, or disposed at local landfill

*AST = Above Ground Storage Tank

VIII. INSPECTION, MAINTENANCE AND REPORTING

WFS's Kutz Plant personnel operate the and maintain the facility and its associated processes. The facility is manned 24 hours per day, 7 days per week, 52 weeks per year and is continuously monitored for equipment malfunctions.

Maintenance on process equipment is performed according to manufacturer's instruction. The below-ground concrete collector boxes are equipped with leak detection and are monitored monthly. Routine inspections and tank guaging are also conducted periodically. All inspections are recorded on the facilities operating record.

In the event of a release of a reportable quantity, the operator reports the release to WFS Gas Control who immediately notifies the WFS Environmental Affairs Department.

IX. SPILL/LEAK PREVENTION AND REPORTING (CONTINGENCY PLANS)

Within the processing units, small spills or leaks will be controlled with the use of curbs or berms around pieces of equipment that are the most susceptible, such as pumps, tanks and separators. Major spills would drain across the Plant and be contained in the stormwater retention pond.

WFS corporate policy and procedures for the controlling and reporting of Discharges or Spills of Oil or Hazardous Substances is provided in Appendix B. WFS Environmental Affairs will report significant spills and leaks to the NMOCD pursuant to NMOCD Rule 116 and WQCC 1-203 using the NMOCD form (see Appendix C).

RE: Discharge Plan GW-045 Renewal
Kutz Canyon Gas Plant
San Juan County, New Mexico

Dear Ms. Deklau:

On April 15, 1993, the groundwater discharge plan, GW-045, for the Williams Field Services Kutz Canyon Gas Plant located in the SW/4 of Section 12, NE/4 of Section 13, and SE/4 of Section 14, Township 28 North, Range 11 West, NMPM, San Juan County, New Mexico, was approved by the Director of the New Mexico Oil Conservation Division (OCD). This discharge plan was required and submitted pursuant to Water Quality Control Commission (WQCC) regulations and was approved for a period of five years. **The approval will expire on April 15, 1998.**

If the facility continues to have potential or actual effluent or leachate discharges and wishes to continue operation, the discharge plan must be renewed. **Pursuant to Section 3106.F., if an application for renewal is submitted at least 120 days before the discharge plan expires (on or before December 15, 1997), then the existing approved discharge plan for the same activity shall not expire until the application for renewal has been approved or disapproved.** The OCD is reviewing discharge plan submittals and renewals carefully and the review time can extend for several weeks to months. **To date the OCD has not received an application for renewal of GW-045.** Please indicate whether Williams Field Services has made or intends to make, any changes in the system, and if so, please include these modifications in the application for renewal.

The discharge plan renewal application for the **Kutz Canyon Gas Plant** is subject to WQCC

Regulation 3114. Every billable facility submitting a discharge plan renewal will be assessed a fee equal to the filing fee of $50.00 plus a flat fee equal to one-half of the original flat fee for gas processing facilities. The $50.00 filing fee is to be submitted with the discharge plan renewal application and is nonrefundable.

Please make all checks payable to: **NMED-Water Quality Management** and addressed to the OCD Santa Fe Office. Please submit the original discharge plan renewal application and one copy to the OCD Santa Fe Office and one copy to the OCD Aztec District Office. **Note that the completed and signed application form must be submitted with your discharge plan renewal request.** (Copies of the WQCC regulations and discharge plan application form and guidelines are enclosed to aid you in preparing the renewal application. A complete copy of the regulations is also available on OCD's website at **www.emnrd.state.nm.us/ocd/**).

If the Kutz Canyon Gas Plant no longer has any actual or potential discharges and a discharge plan is not needed, please notify this office. If the Williams Field Services Company has any questions, please do not hesitate to contact me at (505) 827-7152.

Sincerely,

Roger C. Anderson
Chief, Environmental Bureau
Oil Conservation Division

Re: Change operator at Kutz and Lybrook Plants (GW045 and GW047) to WFS

Dear Mr. Ashley,

In a conversation we had several months ago, you mentioned that the Kutz Plant and the Lybrook Plant were listed in your records under Williams Gas Processing-Blanco as the operator. You were correct in assuming that the operator at these sites should be changed to properly reflect Williams Field Services (WFS) as the operator. Williams assets in the Four Corners area may be owned by any one of several Williams Companies; however, the operator in all cases is WFS. Please change your records accordingly.

If you have any questions, I can be reached at (801) 584-6543.

Best Regards,

Ingrid Deklau

Santa Fe, New Mexico 87505

Dear Mr. Anderson,

In April 1997, a subsurface investigation was performed at the Williams Field Services' (WFS) Kutz Plant in Bloomfield, New Mexico in response to a spill of 200 gallons of lean oil from the lean oil tank. Results of that investigation were forwarded in a report dated May 1997 and titled, 'Results of Assessment at WFS Kutz Plant Lean Oil Tank', to Mr. Sanchez at the NMOCD, and also to Mr. Foust at the Aztec OCD.

The report indicated that WFS planned to limit further migration of any remaining contamination by installing an impermeable cap over the affected area. On June 17, 1997, WFS received a letter of approval on the aforementioned 'Assessment Results' report from Mr. Sanchez, under the condition that Mr. Foust be notified 72 hours in advance of the installation of the impermeable cap.

On September 4, 1997, Mr. Foust received a copy of the enclosed plan for construction of a concrete pad which will be installed to comply with the Condition of Approval included in the June 17, 1997 letter. Mr. Foust gave his verbal approval of the plan to Mr. David Sanders, Kutz Plant superintendent, and requested that we forward a copy to you.

If you have any questions pertaining to this matter, please don't hesitate to contact me at (801) 584-6543 or Mr. David Sanders at (505) 632-4456.

Sincerely,

Verbal Approval

RE: Assessment Results From The Lean Oil Tank At Kutz Plant - Approval
Williams Gas Processing-Blanco
GW-045, Kutz Plant
San Juan County, New Mexico

Dear Mr. Harvey:

The OCD has received the letter and information "Assessment Results From The Lean Oil Tank At Kutz Plant" dated May 5, 1997. **The above mentioned "Assessment Results From The Lean Oil Tank At Kutz Plant" is hereby approved subject to the following condition:**

- Mr. Denny Foust with the Aztec OCD District Office be notified 72 hours in advance of the installation of the impermeable cap. (Telephone (505)-334-6178)

Be, advised that OCD approval of this work plan does not relieve WFS from liability associated with this assessment should it be found at a later date that the procedures taken failed to have adequately protected groundwater. Further, OCD approval does not relieve WFS from responsibility to comply with other federal, state, and local, rules/regulations that may apply.

Sincerely,

Patricio W. Sanchez

Dear Mr. Harvey:

The OCD has received the letter and request "DISCHARGE PLAN REVISION AT KUTZ PLANT GW-45" dated May 5, 1997. The request is considered to be a "Modification" to the GW-45 discharge plan and will require that public notice be issued pursuant to 20 NMAC 6.2. 3108 and that a filing fee and flat fee be charged pursuant to 20 NMAC 6.2 3114. A review of that application as submitted by WFS on may 5, 1997 is deficient in many areas, and therefore the OCD is sending WFS an application form, discharge plan guidelines, and landfarm guidelines, so a complete "Modification" can be completed by WFS and submitted to the OCD so that a public notice can issued and review of this proposal may continue. Please include the application form and $50 filing fee along with the completed "Modification" application. Submit the original application and filing fee to the Santa Fe OCD office and one copy to the Aztec District OCD Office.

The land farm guidelines are being included so WFS may propose to operate and monitor the landfarm in accordance with OCD approved treatment zone and waste application procedures.

If WFS has any questions regarding this NOD please feel free to call me at (505)-827-7156.

Sincerely,

Patricio W. Sanchez

RE: OCD LETTER OF MAY 9, 1997 REGARDING SAMPLE KTZ-LO-V-501

Pursuant to your request, be advised that the sample referenced was collected on March 26, 1997 from the lean oil tank area at the Kutz Plant; the same date which samples from the landfarm were collected. The sample from the lean oil tank was given a "LO" alpha designation as part of the sample identification (see Chain-of-Custody). The results from the analysis of the lean oil sample were communicated previously to Mr. Denny Faust and you and were the basis for the Oil Conservation Division (OCD) request to perform additional assessment work around the lean oil tank at Kutz.

For the record, the additional assessment work has been completed at the lean oil tank at Kutz and a copy of the report has been provided to OCD.

If any additional information is required or if further clarification is necessary, please call me at 801-584-6361.

Respectfully,

Mark Harvey

RE: ASSESSMENT RESULTS FROM THE LEAN OIL TANK AT KUTZ PLANT

Dear Mr. Sanchez:

Enclosed please find a copy of the a report titled: *Results of Assessment at Williams Field Services Kutz Plant Lean Oil Tank.* The report was generated following the assessment conducted at your request subsequent to the recent lean oil release at the plant. The release has been previously reported to the New Mexico Oil Conservation Division (OCD) Aztec office.

As stated in the report, WFS believes remaining contamination does not pose a threat to human health and the environment and proposes to essentially "cap" the area with a synthetic liner or concrete containment. WFS asks for OCD approval to implement this approach.

After reviewing the report, should you have questions or need additional information, please call me at 801-584-6361 or Lee Bauerle at 801-584-6999.

Respectfully,

Mark Harvey
Environmental Services

pc: Lee Bauerle - WFS/SLC

RESULTS OF ASSESSMENT

AT

WILLIAMS FIELD SERVICES KUTZ PLANT

LEAN OIL TANK

RECEIVED
MAY - 9 1997
Environmental Bureau
Oil Conservation Division

May 1997

1.0 Introduction

This document describes the methods of investigation and reports on the preliminary findings of the subsurface investigation of the lean oil tank area at Williams Field Services' Kutz Plant in Bloomfield, New Mexico. Field work was conducted at the site on Wednesday, April 16, 1997. The objective of the investigation was to determine concentrations of Total Petroleum Hydrocarbons (TPH) and benzene, toluene, ethyl benzene, and xylene (BTEX) in soil located inside and outside the bermed area surrounding the lean-oil tank.

2.0 Background

On March 18, 1997 an upset condition at the Kutz Plant caused the release of approximately 200 gallons of lean oil from the lean-oil tank. The release impacted surface soil within the bermed area surrounding the tank. In addition, some of the released oil migrated outside of the bermed area. Migration of the oil on the ground surface was controlled topographically and occurred primarily in a northwesterly direction from the northern end of the bermed area. Approximately 350 square feet of soil was impacted within the bermed area. Outside the bermed area approximately 150 square feet was impacted.

Plant personnel immediately took measures to control and contain the release. These measures included shutting off the source, constructing berms, and collecting and removing free liquid oil. Remediation of soil impacted by the release began on March 19th. Impacted soils were excavated and placed in a bermed area for effective landfarming.

Impacted areas were excavated to an average depth of approximately 18 inches below grade. Excavation was directed by visual observation of soil conditions and the presence or absence of hydrocarbon-like odors in the soil. Following the removal of soil believed to be impacted by this release, soil samples were collected from the area to confirm that the cleanup was complete. These sample results indicated elevated levels of BTEX and TPH. Based on these results, the New Mexico Oil Conservation Division (OCD) requested additional investigative action to determine the extent of contamination and to develop a plan to address same.

3.0 Methods

3.1 Soil Sample Collection

Subsurface soil samples were collected using a rotary-hammer drive point system. This system consists of a stainless steel drive point attached to 3-foot lengths of stainless steel rod. The drive point was driven to the desired sampling depth using a rotary hammer. The assembly was then pulled out of the ground and the drive point replaced with a 1-foot long stainless steel sampling spoon. The assembly was then placed back into the hole and driven an additional 1-foot to collect soil from a discrete depth interval.

A total of six locations were sampled; two within the bermed area and four outside the bermed area. Samples were advanced to a maximum depth of 12-feet below grade. Figure 1 shows the sample collection locations.

Soil samples were examined in the field and characterized by the soil type and the absence or the presence of hydrocarbon-like odors or visual indications of hydrocarbon contamination. The samples were them removed from the sampling spoon and placed in laboratory supplied 4-ounce glass jars with Teflon-lined lids. Each jar was labeled with a unique sample identification number that indicated the location and depth interval from which it was collected. The date, time of sample collection, and sampler's initials were also included on the sample label. Samples were then placed into an ice-filled cooler for preservation and transport to the analytical laboratory.

3.2 Prevention of Cross Contamination

To reduce the potential for cross contamination of the samples the stainless steel sampling spoon was decontaminated prior to collecting each sample. The decontamination procedure included removal of gross contamination with a disposable paper wipe, washing in a non-phosphate detergent solution with a scrub brush, rinsing in tap water, rinsing in distilled water, and allowing to air dry. All personnel handling the samples wore disposable vinyl gloves that were discarded and replaced with a new pair after each sample was colleted.

3.3 Laboratory Analysis

Samples were transported under chain-of-custody to American West Analytical Laboratory (AWAL) in Salt Lake City, Utah. The samples were submitted for TPH analysis by EPA Method 8015 (modified) extraction and BTEX analysis by EPA Method 8020.

4.0 Results

4.1 Field Observations

Table 4.1-1 below summarizes the observations made in the field during this investigation. Soil types were primarily inorganic silts, and clayey silts with moderate plasticity. The upper depth intervals (3-4 foot) contained some fine grained sands with mixed sands and gravel near surface apparently from imported "road base" material.

Hydrocarbon-like odors were detected in the majority of samples. These odors were noted in samples collected from locations both inside and outside the containment berm. The 5-6 foot depth interval sample collected from location KTZ-LO-06, located topographically up gradient from the Lean-Oil tank, had a moderate to strong hydrocarbon-like odor. Samples collected as far as 119-feet west of the bermed containment area had sewer-like odors that may be indicative of weathered hydrocarbons.

Table 4.1-1 Summary of Field Observations

Sample I.D.	Location Description	Depth Interval (feet BGS)	Comments
KTZ-LO-01	42.5' North of center of LO-tank. Within bermed area.	3-4	No obvious hydrocarbon odor.
KTZ-LO-02	24.5' North of center of LO-tank. Within bermed area.	3-4	Strong hydrocarbon odor.
		6-7	Strong hydrocarbon odor.
		9-10	Moderately-strong hydrocarbon odor.
KTZ-LO-03	24' South, 4.75' West of NW corner of containment berm.	5-6	Strong hydrocarbon odor.
		8-9	Strong hydrocarbon odor.
		11-12	Strong hydrocarbon odor
KTZ-LO-04	9' South, 39' West of NW corner of containment berm.	5-6	Sewer-like odor. Possibly weathered hydrocarbon.
		11-12	No comment.
KTZ-LO-05	9' North, 119' West of NW corner of containment berm.	5-6	Sewer-like odor, black-gray staining. Possibly weathered hydrocarbon
KTZ-LO-06	23' South, 13' East of SE corner of containment berm.	5-6	Moderately-strong hydrocarbon odor.
		11-12	No obvious odor.

4.2 Analytical Results

The results indicated that while elevated levels of TPH do exist down to a depth of 12 feet, the concentrations are such that they suggest limited TPH contamination or highly weathered hydrocarbon compounds. Since sewer/sulfur like odors from samples at depth were discernable, it is thought that natural degradation of the hydrocarbons is occuring. The depth of contamination suggests that it resulted not from the recent release, but from historical releases which may have occured in the area. The following table provides the analytical results in summary. Copies of the lab reports are included in Appendix A.

Sample ID	Depth Interval	BTEX (mg/kg)	TPH (mg/kg)
KTZ-LO-01	3 - 4 FT	< 0.10	6.8
KTZ-LO-02	3 - 4 FT	7.83	2000
KTZ-LO-02	6 - 7 FT	0.14	110
KTZ-LO-02	9 - 10 FT	0.79	280
KTZ-LO-03	5 - 6 FT	0.41	120
KTZ-LO-03	8 - 9 FT	< 0.10	48
KTZ-LO-03	11 - 12 FT	0.82	290
KTZ-LO-04	5 - 6 FT	< 0.10	49
KTZ-LO-04	11 - 12 FT	< 0.10	< 2.0
KTZ-LO-05	5 - 6 FT	< 0.10	< 2.0
KTZ-LO-06	5 - 6 FT	0.11	6.5
KTZ-LO-06	11 - 12 FT	< 0.10	< 2.0

5.0 Conclusions

Field observations made during the course of this subsurface investigation suggest that hydrocarbon contamination in soils may exist at the plant in areas outside the area impacted by the recent release from the lean-oil tank. Observations suggest that soil located topographically up gradient of the lean-oil tank may contain concentrations of hydrocarbons. The source of the contaminants is unknown. Due to the fact the the elevation of the site is approximately 6350' above sea level, groundwater has been estimated to be greater than 100'. As such, the risk to protectable fresh water of the state is negligible. When examining the existing "Recommended Remediation Levels" presented in the OCD guidance document concerning TPH and BETX contamination from unlined surface impoundments, the levels of contaminant concentrations discovered at the lean-oil tank are acceptable.

6.0 Further Action

WFS feels confident that the contamination resulting from the March release has been addressed adequately to protect human health and the environment. WFS plans to limit further migration of the remaining contamination by installing an impermeable cap over the area which will serve to limit transport mechanisms (stormwater percolation) which could affect the mobility of remaining contaminants. The cap will also serve to effectively improve the secondary containment for the lean oil tank and mitigate the likelihood of further TPH contamination in the event of a future release. WFS proposes to install a high density polyethylene liner or similar, or concrete slab and curb to satisfy this goal.

RE: One Time Soil Remediation - Approval
Williams Gas Processing-Blanco
GW-045, Kutz Plant
San Juan County, New Mexico

Dear Mr. Harvey:

The OCD has received the letter and information "Results of Land farm Sampling - Discharge Plan Revision" dated April 3, 1997. The OCD on May 9, 1997 received the lab and sample analysis information requested by telephone by the OCD on May 2, 1997. The soil remediation was approved by the OCD on December 12, 1996 as a "Minor Modification" to GW-045 for a volume of 200 cubic yards of contaminated RCRA Subtitle C Exempt soil as certified by WFS on November 11, 1996. **The above mentioned "Results of Land farm Sampling - Discharge Plan Revision" is hereby approved based on the plan that was approved by the OCD on December 12, 1996 and the information listed above, and subject to the following condition:**

- The sample KTZ-LO-V-501 appears to be associated with a "Lean Oil Tank", and not the "Landfarm". WFS will by June 9, 1997 provide the OCD Santa Fe Office with a disclosure regarding this sample and its location at the facility. The BTEX level is at 335 mg/Kg which is greater than 50 mg/Kg, and the TPH is 360 mg/Kg which is greater than 100 mg/Kg.

Be, advised that OCD approval of this work plan does not relieve WFS from liability associated with this soil remediation should it be found at a later date that the procedures taken failed to have adequately remediated the 200 cubic yards of contamination soil. Further, OCD approval does not relieve WFS from responsibility to comply with other federal, state, and local, rules/regulations that may apply.

Sincerely,

Patricio W. Sanchez
Petroleum Engineering Specialist

RE: DISCHARGE PLAN REVISION AT THE KUTZ PLANT GW- 45

Dear Mr. Sanchez:

Enclosed please find a Discharge Plan Revision for Williams Gas Processing- Blanco (WGP-Blanco) Kutz Plant located near Bloomfield, New Mexico. The revision is intended to cover the establishment of an on-site landfarm to be used when needed.

If you have questions or need additional information, please call me at 801-584-6361 or Lee Bauerle at 801-584-6999.

Respectfully,

Mark Harvey
Environmental Services

RECEIVED
MAY - 9 1997
Environmental Bureau
Oil Conservation Division

Williams Gas Processing - Blanco
Kutz Processing Plant
Discharge Plan Revision
May 1997

I. BACKGROUND INFORMATION

On May 5, 1997, Sunterra Gas Proceseeing COMPANY submitted an application for the renewal of the plant's discharge plant (GW-45) to the New Mexico Oil Conservation Division (OCD). The Kutz Plant is located at 190 County Road 4980 in Bloomfield, San Juan County, New Mexico. The plan addresses how spills, leaks, and other accidental discharges to the surface will be managed. The plan (GO-45) was subsequently approved by OCD. Williams Field Services COMPANY purchased the facility in June 1995 and agreed to abide by the provisions of the Discharge Plan. The operating COMPANY which actually owns and operates the facility is Williams Gas Processing-Blanco (WGP-Blanco). According to the terms of the Discharge Plan, WGP-Blanco is required to notify the Director of the OCD of any facility expansion, production increase, or process modification that would result in any change in the discharge of water quality or volume. This revision addresses the addition of a landfarm for contaminated soils at Kutz Plant.

II. PROPOSED MODIFICATIONS

The Kutz Plant may, from time to time, have releases of exempt waste materials in both reportable and non-reportable quantities. Following the required or recommended cleanup of such material, WGP-Blanco proposes to place impacted soils and gravels in an area outside the plant fence line in an area designated for landfarming. The landfarm area will be constructed in such a way as to limit the likelihood that contaminated soils can migrate from the landfarm. This will be accomplished by constructing earthen berms around the affected soils. Samples from the area underlying the landfarm material and samples of the material landfarmed will be collected as appropriate to measure the impact (if any) to the underlying soils and the effectiveness of landfarming. All landfarm material will be segregated as necessary to ensure new material is not improperly added to material from earlier activity.

The plant intends to reuse the soils and gravels as appropriate when they have been determined to be acceptable for use (i.e. meeting cleanup goals, remediation levels, etc.). Such soils will be used only within the plant grounds and uses will include, but not be limited to, backfill, berm construction, repairing potholes, etc.. In the event non-exempt material is generated by cleanup and/or maintenance activities, such material will be properly analyzed and characterized prior to placement in the landfarm area.

III. SUMMARY

No new liquid wastes will be generated by the proposed modification at this facility. All liquid wastes will be handled in accordance with the OCD approved Discharge Plan (GO-45) and this revision.

IV. AFFIRMATION

I hereby certify that I am familiar with the information contained in and submitted with this revision and that such information is true, accurate, and complete to the best of my knowledge and belief.

RE: RESULTS OF LANDFARM SAMPLING- DISCHARGE PLAN REVISION

Dear Mr. Sanchez:

Pursuant to the Discharge Plan Revision (GW-45) dated November 26, 1996, Williams Field Services (WFS) hereby submits this "Closure Report" consistent with the requirements of the New Mexico Oil Conservation Division (OCD) approval letter of December 12, 1996.

The landfarm area used for remediating soils generated by segregating soil and gravel was recently sampled consistent with the conditions of approval. Attached are the laboratory reports following sample analysis. These results are summarized in the table below:

SAMPLE IDENTIFICATION	BENZENE (mg/kg)	BTEX (mg/kg)	TPH (mg/kg) Method 418.1
KTZ-LFBS-V-301	ND	ND	ND
KTZ-LF-V-701	ND	ND	ND
KTZ-LF-DG-01	ND	ND	ND

The first sample is a three point composite from two feet below the remediated soil. The second sample is the composite sample collected from seven points from the landfarm soil. The third sample (KTZ-LF-DG-01) is the sample collected outside the berm of the landfarm three feet below ground surface. As evidenced by the attached laboratory reports, all samples were found to have contamination below detection limits (non-detect).

As originally proposed, WFS plans to utilize this soil throughout the plant. Uses will include, but not be limited to, earthen berm construction and repair, erosion control, and fill material following removal of contaminated soil inside the facility perimeter.

If you need any additional information, please call me at 801-584-6361 or Lee Bauerle at 801-584-6999.

Respectfully,

Mark Harvey
