Re: Remediation Action Plan
Texas - New Mexico Pipe Line Company
Stevans Property, Sec 14-T21S-R37E, Lea County, New Mexico
KEI Job No. 710031

Dear Mr. Savoie:

The following activities are proposed to address soils impacted with hydrocarbon originating from the Texas – New Mexico Pipe Line Co. (TNMPL) release at the referenced site:

- Excavation of shallow soils above NMOCD standard closure levels of 100 ppm TPH, 50 ppm total BTEX, and 10 ppm benzene.
- Based on the presence of a former Chevron pit in the release area and the initial site assessment results, TNMPL will excavate the upper 18" of soil impacted by the TNMPL release in the area of the pit. All impacted soils outside the pit that are above closure levels will be excavated.
- Confirmation sampling will not be performed in the Chevron pit because of the presence of hydrocarbon in this pit prior to the TNMPL release.
- Confirmation sampling outside the pit will include collection of composite samples at selected locations along the excavated area. Excavation will continue outside the pit until the closure standards have been achieved.
- Excavated soils will be temporarily stockpiled on-site and subsequently transported to an approved landfarm. Clean backfill material will be imported and placed into the excavations outside the pit. TNMPL will coordinate with Chevron to determine if the excavated pit area is to be backfilled.

Please contact me with any questions at (210) 680-3767.

Respectfully,

J. Michael Hawthorne, P.G., REM
Senior Geologist

Re: Initial Release Response
Texas - New Mexico Pipe Line Company
Stevens Property
Lea County, New Mexico
KEI Job No. 710031

RECEIVED

APR 15 1998

ENVIRONMENTAL BUREAU
OIL CONSERVATION DIVISION

Dear Mr. Savoie:

This letter summarizes initial release response subsurface investigation activities conducted from July 25, 1997 through August 6, 1997, at the referenced site. The information included herein addresses the purpose and scope of the investigation, background information, field investigation activities, and laboratory analytical results.

PURPOSE AND SCOPE

The primary purpose of the investigation was to assess the extent of hydrocarbons across the site. The scope of work during the subsurface investigation included advancing 13 soil borings, collecting native soil samples, and submitting the soil samples for determination of total petroleum hydrocarbons (TPH) concentrations. Soil samples were also variously submitted for determination of chlorides and volatile/semi-volatile concentrations.

BACKGROUND INFORMATION

A hydrocarbon release was identified at the site during July of 1997. The release appeared to migrate down hill into a former Chevron pit, accumulated on a portion of the pit surface, and then migrated off the former pit into adjacent pasture land. The boundaries of the former Chevron pit and the TNMPL release surface stain were clearly visible. The former pit was being remediated on the surface (plow and fertilizer), but no vertical delineation had been performed, to our knowledge.

FIELD INVESTIGATION

WORK PLAN

During the subsurface investigation, thirteen soil borings, designated No. 1 through No. 13, were advanced utilizing a hand auger. The soil borings were advanced past the stain depth or until auger refusal. A Site Plan with the approximate locations of the soil borings and other site details is presented as FIG. 1.

The soil borings were advanced using the following guidelines:

- one soil boring in the source area (No. 1);
- one soil boring halfway between the source area and the former Chevron pit (No. 2);
- four soil borings in the former pit (two outside of the TNMPL surface stain and two inside of the stained area - Nos. 3, 4, 12, and 13); and
- one soil boring every 50 feet in the two "arms" that flowed out of the former pit (No. 5 through No. 11).

SOIL SAMPLING

Soil samples were collected at six inch intervals for the first foot and then at one foot intervals until boring termination depth. The soils were field screened, and samples were prepared and shipped to the laboratory for determination of TPH concentrations. Soil samples were also variously submitted for determination of chlorides and volatile/semi-volatile concentrations.

Representative soil samples were divided into two separate portions using clean, disposable gloves and clean sampling tools. One portion of the soil sample was placed in a disposable sample bag. The bag was labeled and sealed for head-space analysis using a photo-ionization detector (PID) calibrated to a 100 ppm isobutylene standard.

The other portion of the soil sample was placed in a sterile glass container equipped with a Teflon-lined lid furnished by the analytical laboratory. The container was filled to capacity with soil to limit the amount of head-space present. Each container was labeled and placed on ice in an insulated cooler. Upon selection of samples for analysis, the cooler was sealed for shipment to the laboratory. Proper chain-of-custody documentation was maintained throughout the sampling process.

Two to three soil samples were selected from each soil boring based on the following criteria:

- The sample with the highest head-space reading.
- The sample at the bottom of each boring.

The samples were transported to Environmental Lab of Texas, Inc. in Odessa, Texas for determination of TPH concentrations by EPA Method SW846-8015M Diesel Range Organics (DRO). Ten soil samples were selected and submitted for determination of chloride concentrations by EPA Method SW846-9252. Eleven soil samples were selected and submitted for determination of volatile/semi-volatile concentrations by EPA Method SW846-8240 and SW846-8270, respectively.

SOIL ANALYTICAL RESULTS

The soil analytical results indicated the following concentrations:

CONSTITUENT	CONCENTRATION RANGE (mg/kg)
TPH	ND to 37,168
Chlorides	255 to 2,552
Carbon Disulfide	ND to 0.103
Methylene Chloride	ND to 2.353
2-Butanone	ND to 2.353
Benzene	ND to 2.723
Toluene	ND to 37.256
Ethylbenzene	ND to 26.086
m & p Xylene	ND to 18.155
o-Xylene	ND to 19.265

Note: All volatile compounds not listed above and all semi-volatile compounds were below laboratory reporting limits.

Soil analytical results are summarized in TABLE I through TABLE IX. TPH and chloride concentrations are also graphically presented on FIG. 2. Soil laboratory analytical reports are presented in APPENDIX A.

Please contact me with any questions at (210) 680-3767.

Respectfully,

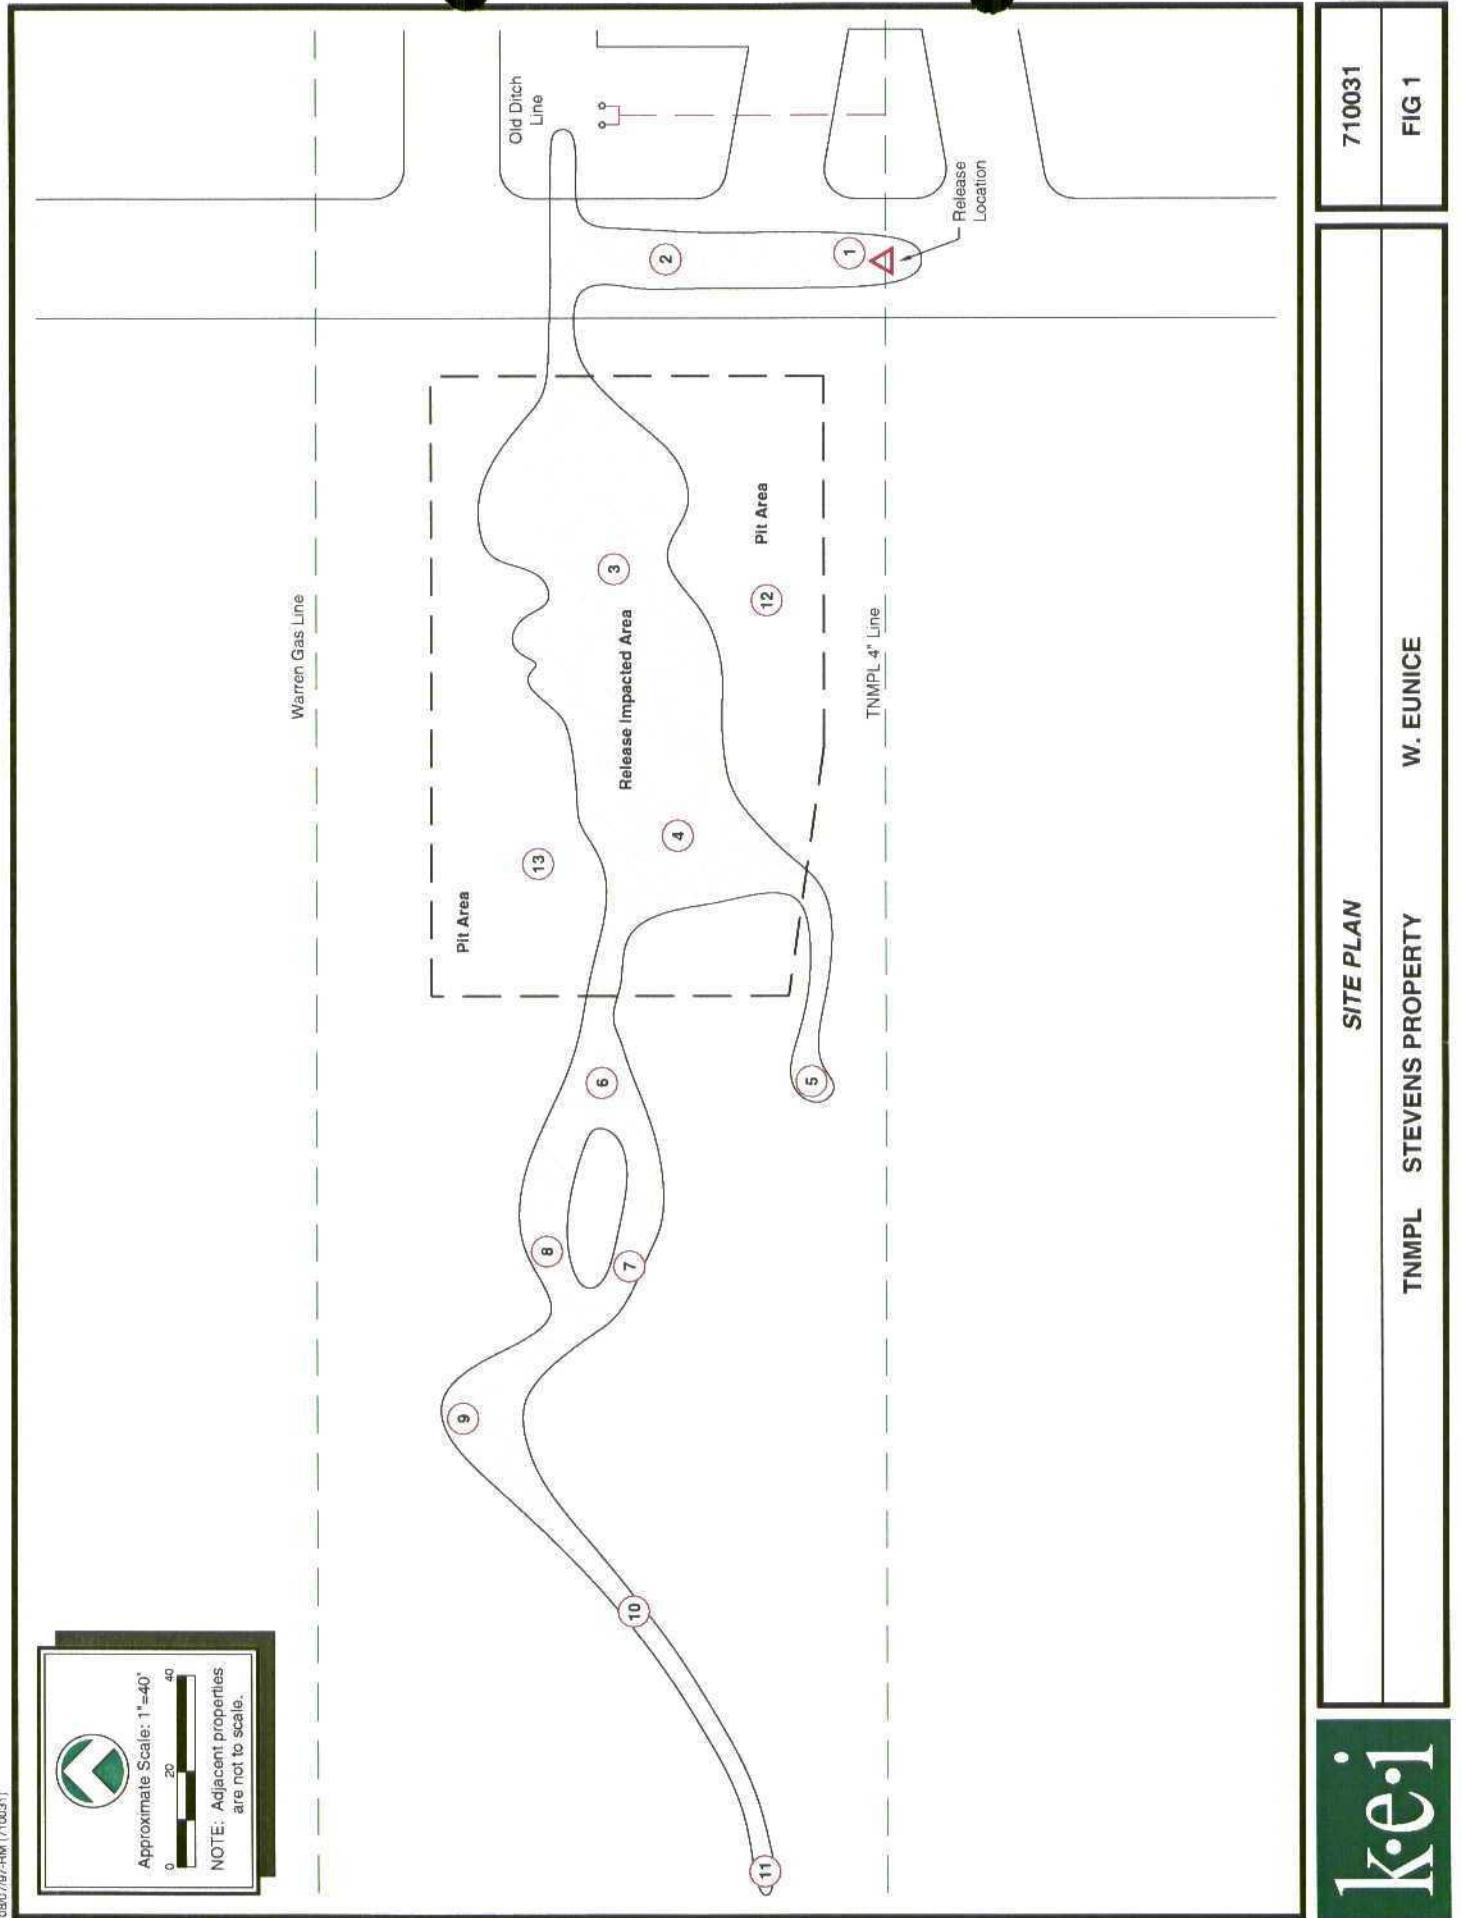

J. Michael Hawthorne, P.G., REM
