General Description of Remedial Action: The site is located adjacent to an oil tank

battery with historic oily hard pan surrounding this junction box. The current battery operator

determined the junction box responsibility at this site as the 30' pipeline right-of-way. A soil boring

was completed 11/14/01 and demonstrated impact stopped before reaching groundwater.

The 15' soil sample was lab verified at 62 ppm chlorides and 22 ppm TPH. The site was delineated

to a 15' radius and 8.5' deep. The high impact soil was hauled to a permitted disposal facility

and fresh soil brought in for backfill. A clay barrier and water tight junction box was installed

and backfilled. Natural attenuation will remediate the remaining hydrocarbon.

FINAL ANALYTICAL RESULTS: Sample Date 11/28/2001 Sample Depth 8.5

Procure 5-point composite sample of bottom and 4-point composite sample of sidewalls. TPH, BTEX and Chloride laboratory test results completed by using an approved lab and testing procedures pursuant to NMOCD guidelines.

General Description of Remedial Action: The site is located adjacent to an oil tank battery with historic oily hard pan surrounding this junction box. Torch Energy Services operates the tank battery and has granted ROC permission to remediate the 30' right-of-way around this junction box. A soil boring was completed 11/14/01 and demonstrated ground water has not been impacted. The junction was delineated to a 30' radius and 8.5' deep. The high impact soil was hauled to a permitted disposal site and fresh soil brought in for backfill. A clay barrier and water tight junction box was installed and backfilled.
