## **INTRODUCTION**

On behalf of Plains Marketing, L.P., (Plains), NOVA Safety and Environmental (NOVA) is pleased to submit this Annual Monitoring Report in compliance with the New Mexico Oil Conservation Division (NMOCD) letter of May 1998, requiring submittal of an Annual Monitoring Report by April 1 of each year. Beginning on May 29, 2004, project management responsibilities were assumed by NOVA, having previously been managed by Environmental Technology Group, Inc. (ETGI). The TNM 97-18 pipeline release site, formally the responsibility of Enron Oil Trading and Transportation (EOTT) is now the responsibility of Plains. This report is intended to be viewed as a complete document with figures, attachments, tables and text. The report presents the results of the quarterly groundwater monitoring events conducted in calendar year 2004 only. For reference, the Site Location Map is provided as Figure 1. Cumulative tables and laboratory data are provided on the attached compact disk.

Groundwater monitoring was conducted during four (4) quarterly events in calendar year 2004 to assess the levels and extent of dissolved phase and Phase-Separated Hydrocarbon (PSH) constituents. The groundwater monitoring events consisted of measuring static water levels in the monitor wells, checking for the presence of PSH, and purging and sampling of each well exhibiting sufficient recharge. Monitor wells containing a thickness of PSH greater than 0.01 foot were not sampled.

## **SITE DESCRIPTION AND BACKGROUND INFORMATION**

The TNM 97-18 release occurred on September 10, 1997. An estimated 83 barrels of crude oil was released from the 16-inch pipeline of which none was recovered. Approximately 799 cubic yards of impacted soil was excavated from the area around the release point and stockpiled onsite prior to ETGI involvement.

Currently there are thirty monitor wells (MW-1 through MW-30) and two recovery wells (RW-1 and RW-2) onsite. A pneumatic product recovery system is operating onsite incorporating three monitor wells (MW-4, MW-5 and MW-7). Manual product recovery has been conducted at monitor wells MW-4, MW-5, MW-7, and MW-10 and on recovery wells RW-1, and RW-2 during the 2004 calendar year.

## **FIELD ACTIVITIES**

Quarterly monitoring events for the reporting period were performed according to the following reduced sampling schedule, which was approved by the NMOCD in correspondence dated April 28, 2004:

<b>NMOCD APPROVED SAMPLING SCHEDULE</b>					
<b>Location</b>	<b>Schedule</b>	<b>Location</b>	<b>Schedule</b>	<b>Location</b>	<b>Schedule</b>
MW-1	Annually	MW-12	Annually	MW-23	Quarterly
MW-2	Quarterly	MW-13	Annually	MW-24	Quarterly
MW-3	Quarterly	MW-14	Annually	MW-25	Quarterly
MW-4	Quarterly	MW-15	Annually	MW-26	Semi-Annually
MW-5	Quarterly	MW-16	Annually	MW-27	Quarterly

NMOCD APPROVED SAMPLING SCHEDULE					
Location	Schedule	Location	Schedule	Location	Schedule
MW-6	Quarterly	MW-17	Quarterly	MW-28	Semi-Annually
MW-7	Quarterly	MW-18	Quarterly	MW-29	Semi-Annually
MW-8	Annually	MW-19	Annually	MW-30	Semi-Annually
MW-9	Annually	MW-20	Annually	RW-1	Quarterly
MW-10	Quarterly	MW-21	Annually	RW-2	Quarterly
MW-11	Annually	MW-22	Semi-Annually		

The site monitor wells were gauged and sampled on February 10, May 10, August 25, and December 1, 2004. During each sampling event the monitor wells were purged of approximately three well volumes of water or until the wells were dry using a PVC bailer or electrical Grundfos Pump. Groundwater was allowed to recharge and samples were obtained using disposable Teflon samplers. Water samples were collected in clean glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of by Key Energy utilizing a licensed disposal facility (NMOCD AO SWD-730).

Locations of the monitor wells and the inferred groundwater gradient, which were constructed from measurements collected during the four (4) quarterly monitoring events, are depicted on Figures 2A through 2D, the Inferred Groundwater Gradient Maps. Groundwater elevation data for 2004 is provided as Table 1. Historic groundwater elevation data beginning at project inception is enclosed on the attached data disk.

Groundwater elevation contours generated from water level measurements acquired during the quarterly sampling events of 2004 indicated a general gradient of approximately 0.008 ft/ft to the southeast. The corrected groundwater elevations ranged between 3465.19 to 3476.84 feet above mean sea level, in MW-30 on February 10, 2004 and in MW-6 on August 25, 2004, respectively.

A measurable thickness of PSH was measured in nine (9) monitor wells and recovery wells during the reporting period. The average thickness of PSH in monitor wells and recovery wells during the first, second, third and fourth quarters of 2004 were 1.15 feet, 2.03 feet, 1.72 feet, and 1.45 feet, respectively. The maximum thickness of PSH in monitor wells and recovery wells during the first, second, third and fourth quarters of 2004 were 2.94 feet, 10.60 feet, 5.33 feet, and 4.38 feet, respectively. PSH data for the 2004 gauging events can be found in Table 1. Approximately 250 gallons of PSH was recovered from the site during the 2004 reporting period. A total of approximately 1,051 gallons of PSH has been recovered since the start of product inception.

## LABORATORY RESULTS

Groundwater samples collected during the first three quarterly monitoring events were delivered to AnalySys Inc., Austin, Texas for determination of Benzene, Toluene, Ethylbenzene and Xylene (BTEX) constituent concentrations by EPA Method SW846-8260b. Fourth quarter sample analysis was performed by Trace Analysis, Inc., of Lubbock, Texas for determination of BTEX constituent concentrations by EPA Method SW846-8021b. 2004 BTEX constituent concentrations are summarized on Table 2. Historical BTEX constituent concentrations and copies of the laboratory reports for 2004 are provided on the attached data disk. The quarterly

groundwater sample results for benzene and BTEX concentrations are depicted on Figures 3A-3D.

Review of laboratory analytical results of the groundwater samples obtained during the 2004 monitoring period indicate that benzene and BTEX concentrations were below NMOCD regulatory standards in 22 monitor wells and six (6) were above NMOCD regulatory standards. However, during at least one quarterly monitor event, samples from 12 monitor wells and recovery wells displayed concentrations of benzene above the applicable NMOCD Regulatory Standard. Seven (7) monitor wells and recovery wells contained measurable thicknesses of PSH (ranging from 0.01 to 10.60 feet) during the annual monitoring period and were not sampled for at least one quarterly sampling event.

Laboratory analytical results were compared to NMOCD regulatory limits based on the New Mexico groundwater standards found in section 20.6.2.3103 of the New Mexico Administrative Code.

## **SUMMARY**

This report presents the results of monitoring activities for the 2004 annual monitoring period. Currently, there are 30 groundwater monitor wells (MW-1 through MW-30) and two (2) product recovery wells (RW-1 through RW-2) on-site. Manual product recovery occurs on a bi-weekly schedule. Groundwater elevation contours generated from water level measurements acquired indicated a general gradient of approximately 0.008 ft/ft to the southeast.

As discussed above nine (9) monitor wells and recovery wells contained measurable PSH thicknesses in 2004. Approximately 250 gallons of PSH was recovered from the site during the 2004 reporting period. A total of approximately 1,051 gallons of PSH has been recovered since the start of product inception. The average thickness of PSH in monitor wells and recovery wells during the first, second, third and fourth quarters of 2004 were 1.15 feet, 2.03 feet, 1.72 feet, and 1.45 feet, respectively. Throughout 2004 PSH amounts have fluctuated at the site with no obvious increases or decreases.

As discussed above benzene concentrations were above NMOCD regulatory standards in 12 monitor and recovery wells during 2004. Total BTEX concentrations observed in monitor wells on-site exceeded the NMOCD regulatory standard in six (6) monitor wells during the reporting period and 22 were below NMOCD standards. There were seven well locations that contained measurable amounts of PSH during the annual monitoring period and were not sampled.

The Release Notification and Corrective Action Form (C-141) is provided as Appendix A.

## **ANTICIPATED ACTIONS**

Plains is requesting permission from the NMOCD to plug and abandon monitor wells MW-13, MW-19, and MW-29 due to the following conditions.

- Up gradient control along the northern perimeter of the leak zone is provided by MW-1.

- MW-13 and MW-29 have not displayed detectable concentrations of dissolved phase impact is nine (9) consecutive sampling events since 2002.
- MW-19 has not displayed concentrations of dissolved phase impact above the NMOCD Regulatory Limit in nine (9) consecutive quarters since 2002. One (1) detectable concentration of benzene (0.001 mg/L), which was below the applicable NMOCD Regulatory Standard, was detected in that time.

It is also requested that monitor wells MW-22 and MW-26 be placed on an annual sampling schedule based on nine (9) consecutive sampling events in which concentrations of dissolved phase impact have been below NMOCD Regulatory Standards.

A plan will be developed to address the impacted and/or excavated soil remaining on site. Any soil proposals will be addressed under separate cover from this report.

## **LIMITATIONS**

NOVA has prepared this Annual Monitoring Report to the best of its ability. No other warranty, expressed or implied, is made or intended.

NOVA has examined and relied upon documents referenced in the report and has relied on oral statements made by certain individuals. NOVA has not conducted an independent examination of the facts contained in referenced materials and statements. We have presumed the genuineness of the documents and that the information provided in documents or statements is true and accurate. NOVA has prepared this report, in a professional manner, using the degree of skill and care exercised by similar environmental consultants. NOVA also notes that the facts and conditions referenced in this report may change over time and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

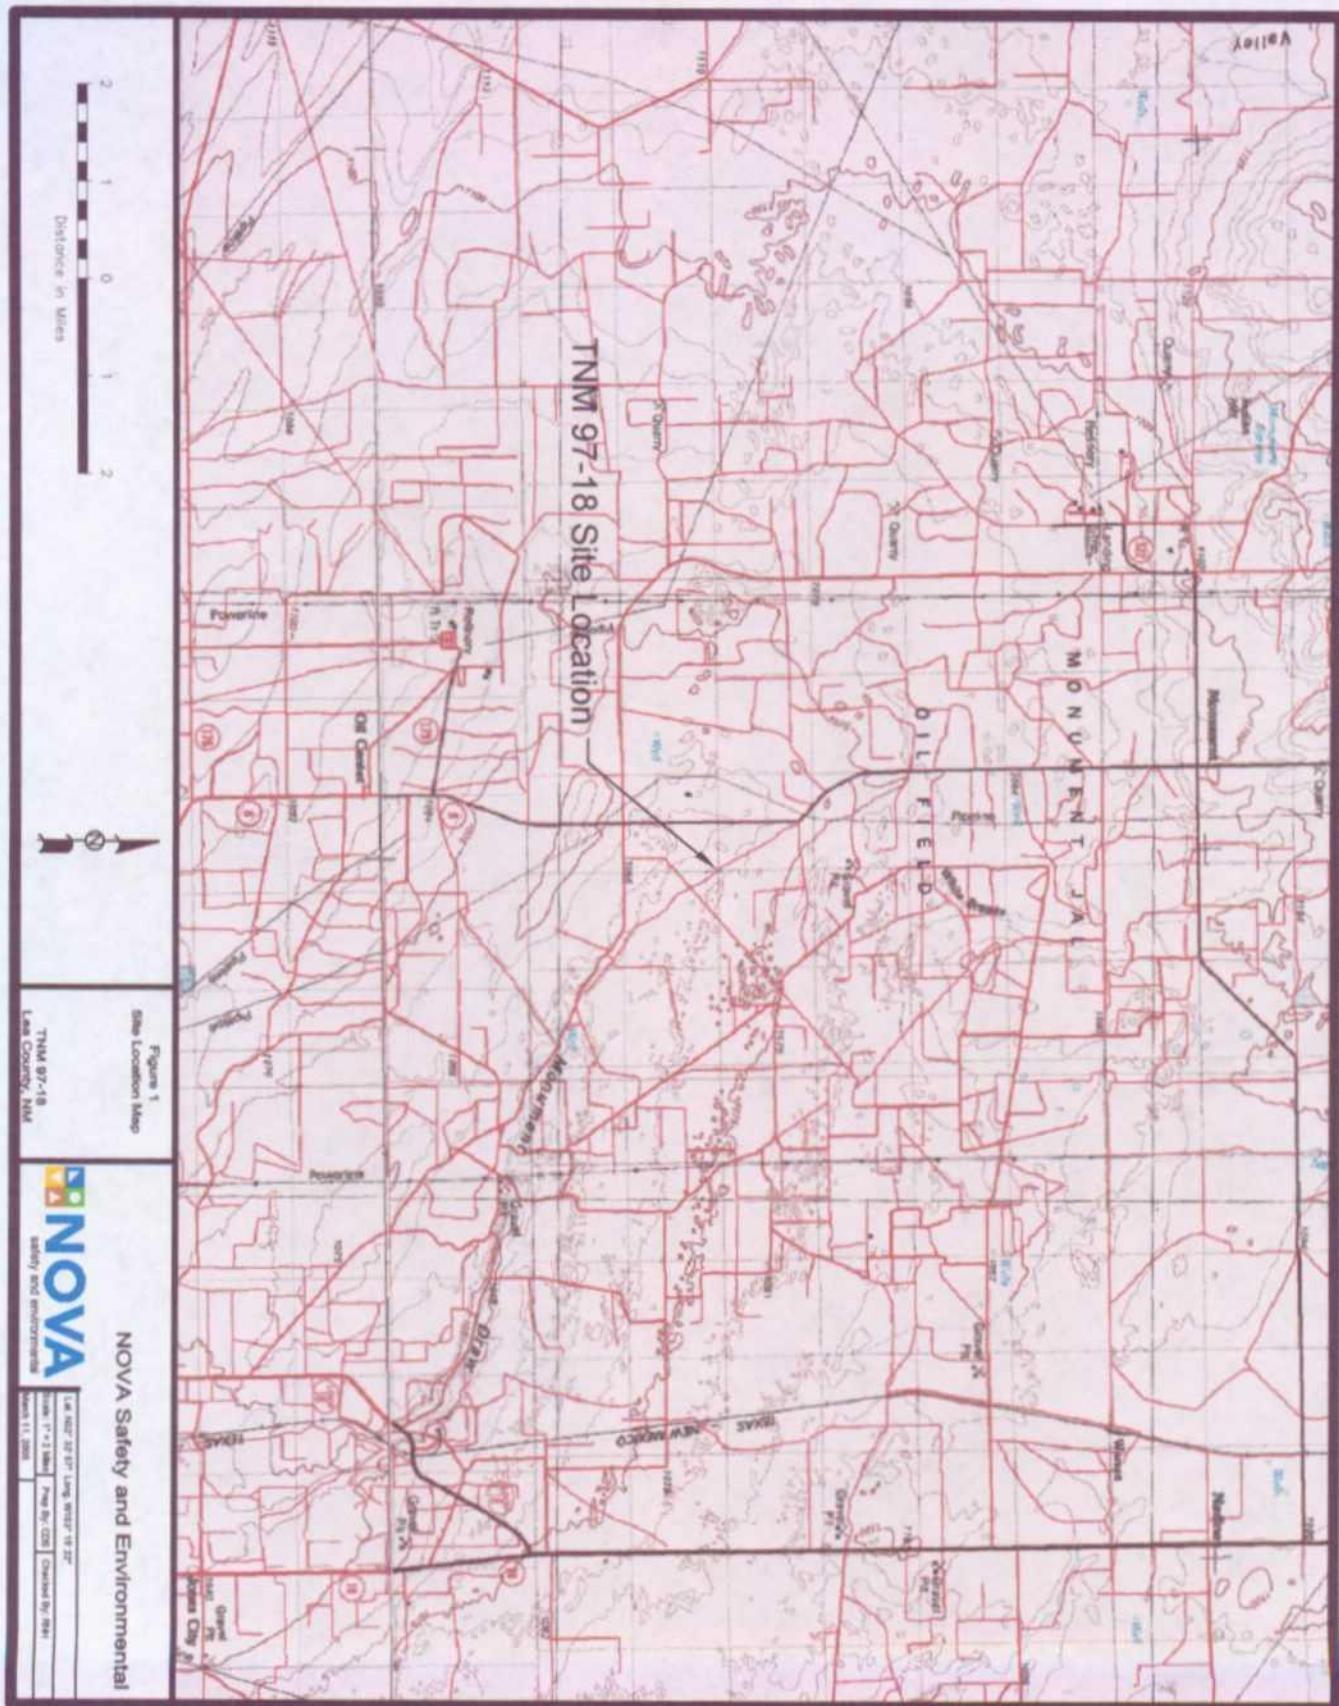

This report has been prepared for the benefit of Plains. The information contained in this report, including all exhibits and attachments, may not be used by any other party without the express consent of NOVA and/or Plains.
