Subject: ROC A-20 and M-16-1 Stage 2 Plan Extension Request

Wayne, as we discussed, the Stage 2 Abatement plans for the above referenced sites were to be due on September 30. However, both sites require additional soil and groundwater delineation and evaluation. On behalf of ROC I would like to request an extension until January 30 to submit the Stage 2 Abatement plans. We will, of course, attempt to schedule field activities as soon as possible, but with the increased industry activity and upcoming holiday season I want to ensure we have sufficient time to hire drilling and excavation contractors to complete the field activities. Your approval of this request will be most appreciated. Regards, Sharon

Mr. Price:

In accordance with Rule 19 (Section 19.15.1.19 NMAC, Subsection G) Public Notice requirements, please accept the enclosed copies of proof that the appropriate individuals and entities were notified of the Stage 1 Abatement Plan submitted by the consulting firm of Arcadis G & M of Midland, Texas for the EME jct. Subject: **2005 MONITOR WELL REPORT/SAMPLING SUMMARY
JCT. A-20, EME SWD SYSTEM
UNIT 'A', SEC. 20, T20S, R37E
NMOCD CASE # AP-43 (formerly 1R0427-89)**

Dear Mr. Price:

On behalf of Rice Operating Company (ROC), ARCADIS G&M, Inc. (ARCADIS) respectfully submits the 2005 Monitor Well Report for the EME Jct. A-20 site located in the Eunice Monument Eumont (EME) Salt Water Disposal (SWD) System.

One monitoring well was installed in 2002 during delineation as part of the Junction Box Upgrade Program. This well is sampled quarterly pursuant to New Mexico Oil Conservation Division (NMOCD) guidelines. ARCADIS has been contracted by ROC to address groundwater concerns at the site. Environmental Lab of Texas of Odessa continued to conduct analytical tests of the water samples in 2005.

Soon after the well was installed, phase-separated hydrocarbon (PSH) was found on the water. ROC has actively worked at recovering the PSH in the well by hand bailing or by using an absorbent sock. In September of 2004 Basin Environmental Service Technologies (Basin) assumed the maintenance and weekly replacement of the socks; PSH thickness and volume are measured weekly. Basin will continue weekly recovery in 2006 unless an alternate remedial method is proposed and approved by NMOCD.

The attached table summarizes the analytical results from groundwater samples collected from the monitor well at the site. Overall, chloride and total dissolved solids (TDS) concentrations have remained relatively consistent since sampling was initiated. TDS concentrations increased in 2005 from a concentration of 4,290 mg/L

to 5,310 mg/L. Chloride concentrations remained fairly consistent in 2005 ranging from a concentration of 2,330 mg/L to 2,460 mg/L. Samples were not analyzed for hydrocarbon compounds as PSH is present in the well.

A Stage 1 Abatement Plan was submitted to NMOCD on June 23, 2005 and approved as administratively complete on November 18, 2005. Public Notice was submitted to the NMOCD on November 28, 2005 and published in the Albuquerque Journal and Hobbs News Sun on December 10, 2005.

The Stage 1 Abatement Plan Proposal proposed site soil and groundwater investigation activities including: performing a one-mile water well inventory; further delineation of the vertical and lateral extent of soil impact; and investigation of groundwater impacts. Following the public comment period and receipt of NMOCD final approval of the Stage 1 Abatement Plan Proposal, the proposed activities will be performed.

ROC is the service provider (operator) for the EME Salt Water Disposal System and has no ownership of any portion of pipeline, well or facility. The EME SWD System is owned by a consortium of oil producers, System Partners, who provide all operating capital on a percentage ownership/usage basis.

Thank you for your consideration concerning this annual summary of groundwater monitoring information. If you have any questions, do not hesitate to contact me.

Sincerely,
