RE: 1999 SAN JUAN BASIN ANNUAL GROUNDWATER REPORT

Dear Bill:

PNM is pleased to submit the 1999 Annual Groundwater Report on Unlined Surface Impoundments in the San Juan Basin. Pursuant to PNM's Groundwater Management Program for Unlined Surface Impoundment Closures, the report details the ongoing investigation/remedial activities at unlined surface impoundments having groundwater contamination as identified by PNM. A list of groundwater sites reported in this document is provided below.

| | |
|--------------------------|-----------------------|
| Blanco Wash Drip | Mangum 1E |
| Davis 1 | McClanahan 22 |
| Dogie East Pit | McClanahan A 2E |
| Dogie North Pit | McCoy Gas Com A1 |
| Florance 124 | Miles Federal 1E Drip |
| Florance 32A | O' Shea 1M |
| Florance 40 | Patterson A Com A1 |
| Florance 44 | Pritchard 2 |
| Florance M 47X | Randleman 1 |
| Hampton 4M | Reid 16 Drip |
| Honolulu Drip | Turner 1A |
| Ice Canyon Drip | Wilmerding 1M |
| Jacques 2A | Zachry 18E |
| Jicarilla Contract 147-6 | |
| Linda 1A | |

Consistent with PNM's San Juan Basin Groundwater Management Plan, PNM will request closure of four of the above sites, the Florance 32A, Jacques 2A, Mangum 1E and the McClanahan A2E, with the submittal of the 1st Quarter 1999 Pit Closures Report. This request is based upon the analytical data collected over the last two years at each of the sites. BTEX concentrations have been consistently below WQCC standards for four consecutive quarters.

Upon approval of the groundwater closure report, PNM will plug and abandon all of the groundwater monitoring wells at each of the locations. The concrete pad and metal vault surrounding each well will be removed. The well casing will be cut to ground surface and each well will be plugged to the surface

Groundwater Site Summary Report

Quarter/Year: 2nd/98, 3rd/98, 4th/98 & 1st/99

Operator: Burlington Resources
Sec: 24 **Twn:** 31N **Rng:** 11W **Unit:** M
Canyon: Animas

Vulnerable Class: Original
OCD Ranking: 40
Lead Agency: NMOCD

Topo Map: previously submitted

Well Completion Diagram: previously submitted.

Site Map with Analytical Results: Figure 1

Groundwater Contour Map: Figure 2a (May 1998), Figure 2b (August 1998), Figure 2c (November 1998) & Figure 2d (January 1999)

Hydrograph: Figure 3

Full suite-Groundwater Sampling Results: Table 1

Analytical Results: attached

Site Hydrology:

The Turner 1A site as presented in Figure 1 is located in the floodplain of the Animas River, about 1000 feet southeast of the waterline, and lies perhaps 20 feet higher in elevation than the river waters. Materials beneath the site are essentially the same as the modern river's bedload, spanning the broad alluvial plains along the major river systems of the San Juan Basin (Stone et al., 1983). The valley floor of the Animas is about one mile wide near the Turner 1A site. Hydraulic conductivity of these materials is expected to be very high, as they are described as "cobbles" in site excavations and monitor wells.

An irrigation ditch (not shown on topographic maps) skirts the north and east sides of the site. Recharge to groundwater is likely from drainage of these irrigated lands. Depth to water is roughly ten feet.

Four monitor wells installed at the Turner 1A site show that groundwater flow is west-northwest, following the topographic gradient precisely towards the river (Figures 2a through 2d). Groundwater elevations are strongly influenced by the operation of the irrigation ditch in spring and summer months; hydrographs at the site show lowest elevations in the wintertime (Figure 3). Flow direction does not vary appreciably from season to season (see Figures 2a through 2d).

Activities for Previous Year:

Quarterly sampling took place on May 11, August 7, and November 3, 1998 and again on January 21, 1999. Water level measurements were taken in the four monitoring wells. PNM conducted groundwater sampling in each well for chemical analyses of benzene, toluene, ethylbenzene, and xylenes (BTEX) during the May 1998 sampling event, and only in well MW-2 thereafter. All sampling was performed in strict compliance with EPA protocol. PNM delivered the samples to OnSite Technologies, Farmington, New Mexico. The samples were analyzed for BTEX using EPA Method 8020.

PNM conducted additional source removal at this site in March, 1998 in order to address the elevated benzene levels in MW-2. Approximately 980 cubic yards of contaminated soil were remediated.

Results:

Figure 1 presents a site map showing BTEX for each monitoring well since groundwater contamination was discovered. MW-1, -3 and -4 have been below standards since installation, and as of the May 1998 sampling event, each of these wells has shown BTEX concentrations below standards for four consecutive quarters. MW-2 is demonstrating a strong downward trend in benzene concentrations since secondary remediation. Benzene levels are

Contact: Maureen Gannon

Telephone: 505-241-2974

almost to the standard in the last sampling event (12 ppb in January, 1999). Toluene, ethylbenzene and xylenes concentrations in this well have been below standards since project inception.

Future Actions:

PNM will continue to monitor groundwater elevations and conduct quarterly groundwater sampling of MW-2 at the Turner 1A site. It would appear that the secondary excavation was effective as source control. The monitoring well network provides representative data, and wells are placed to detect contaminants entering and leaving the site. There does not appear to be upgradient source(s) affecting the site, nor evidence that any contamination escapes the site undetected. It is expected that concentrations of benzene will quickly fall below standards and that site closure can occur in four to five calendar quarters.

RE: Turner 1A

Order No.: 9805033

Dear Maureen Gannon,

On Site Technologies, LTD. received 5 samples on 5/12/98 for the analyses presented in the following report.

The Samples were analyzed for the following tests:

BTEX (SW8020A)

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

David Cox

RE: Turner 1A

Order No.: 9808016

Dear Maureen Gannon,

On Site Technologies, LTD. received 2 samples on 8/7/98 for the analyses presented in the following report.

The Samples were analyzed for the following tests:

BTEX (SW8020A)

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative.

If you have any questions regarding these test results, please feel free to call.

Sincerely,

A handwritten signature in black ink, appearing to read "David Cox".

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

RE: Turner 1A

Order No.: 9811012

Dear Maureen Gannon,

On Site Technologies, LTD. received 2 samples on 11/3/98 for the analyses presented in the following report.

The Samples were analyzed for the following tests:

BTEX (SW8020A)

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications except where noted in the Case Narrative.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

A handwritten signature in black ink, appearing to read "David Cox".

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.
