[image003.png](#)

Wade,

The OCD has denied the submitted Remediation Plan C-141 for incident #nOY1831238090 for the following reason:

- The data used to identify depth to groundwater and determine closure criteria is over ½ mile away. There is a well 0.12 mile away with depth to groundwater of 19' below ground surface. Oxy can choose to collect data from this well if it is still accessible. If you feel the depth to groundwater is >100', a shallow borehole can be drilled to 101', at the site, allowing for verification of the depth. If water is not visible after reaching bottom-hole and waiting 24 hours, the OCD will accept this as evidence. We would just need a copy of the driller's log. Otherwise, , impacted soils will need to meet Table 1 Closure Criteria for ground water at a depth of 50 feet or less.

The Denied C-141 can be found in the online image file. Please review and make the required correction prior to resubmitting though the fee portal. If you have any questions or believe this denial is in error, please contact me prior to submitting an additional C-141.

Thanks,

Cristina Eads

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
