Robert,

We did not scrape the site. The heavy rain fall that occurred right after this release, washed the spill away. There were many washed out areas which did not allow us to get to the sight so we can delineate the site. Once we were able to get there, the spill had been washed away. Thank you.

Wade,

Was the Cedar Canyon 15-1 SWD release scraped before the samples were taken? The C-141 says the concentration of dissolved chloride in the produced water was >10,000 mg/l. All of the samples, even the surface samples were under the 600 mg/kg limit. Please help me understand how a release of this size and the lab analysis match up.

Thanks
