NRM2012539093 MESA VERDE WOLFCAMP 4H @ 30-025-46112

Wade,

The OCD has approved the Site Characterization and Remediation Plan for incident # NRM2012539093 with the following conditions:

- Additional samples will need to be collected at the 3' and 4' intervals in the SP 1-5 areas to address potential chloride migration through depth. In the event additional chloride contamination is discovered, the responsible party will perform additional required investigation/remediation.
- If no additional contamination is found, the SP5 area will also need to be remediated to a depth of greater than 2 feet.
- Confirmation samples will be collected as composite samples, representing an area of no greater than 300 square feet for floor samples and sidewall samples. At a minimum, at least one sidewall sample will need to be collected from each wall of the excavation. Individual grab samples will be collected from any wet or discolored areas.

The signed C-141 can be found in the online image data base under the incident #. Please let me know if you have any questions.

Thanks,

Cristina Eads

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
