Subject: Burnett Gissler A-2 Battery
Date: Friday, December 12, 2014 11:13:44 AM

All,

Attached is the excavation plat for the Burnett Gissler A-2 Battery. RECS is still hand shoveling the leak area inside the facility, but would like to request permission to install liner in the 4' excavation and begin backfilling all excavations outside of the facility once the leak area inside the facility has been completed and sample results have returned from the lab, RECS will forward you that data and request to backfill at that time. If you have any other questions or concerns please feel free to contact me. Thanks.
