Re: Work Plan for the COG Operating LLC., Burch Keely Unit #205, Unit O, Section 26, Township 17 South, Range 97 East, Eddy County, New Mexico.

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the Burch Keely Unit #205, Unit O, Section 26, Township 17 South, Range 97 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32 48.163°, W 104 02.567°. The site location is shown on Figures 1 and 2.

Background

According to the State of New Mexico C-141 Initial Report, the leak was discovered on August 14, 2013, and released approximately seventy five (75) barrels of produced water from a failed fitting on a fiberglass water line. To alleviate the problem, COG personnel replaced the fitting to prevent a reoccurrence. Fifty (50) barrels of produced water was recovered. The spill initiated in the pasture affecting an area approximately 90' X 60' and 70' x 30'. The initial C-141 form is enclosed in Appendix A.

Groundwater

According to the NM State Engineers Well Report, two (2) water wells were listed in Section 34 with depth to groundwater of approximately 60' below surface. The Geology and Groundwater Conditions in Southern Eddy County, New Mexico Resource shows groundwater depth of approximately 150' below surface. The NMOC groundwater map shows a depth to groundwater of approximately 150' below surface. The groundwater data is shown in Appendix B.

Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 5,000 mg/kg.

Soil Assessment and Analytical Results

Auger holes

On September 3, 2013, Tetra Tech personnel inspected and sampled the spill area. Five (5) auger holes (AH-1 through AH-5) were installed using a stainless steel hand auger to assess the impacted soils. Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The sampling results are summarized in Table 1. The auger hole locations are shown on Figure 3.

Referring to Table 1, none of the samples showed BTEX or TPH concentrations above the RRAL. Auger holes (AH-1 and AH-2) showed elevated chloride concentrations down to 9.5' below surface with chloride highs of 20,400 mg/kg and 22,100 mg/kg at 2.5' below surface, respectively. The areas of auger holes (AH-1 and AH2) were not vertically defined.

The areas of auger holes (AH-3, AH-4 and AH-5) all showed elevated chloride concentrations with chloride highs of 17,800 mg/kg at 2.5', 20,400 mg/kg at 4.5', and 20,800 mg/kg at 1.5' below surface, respectively. Auger holes (AH-3, AH-4, and AH-5) showed a decline in chloride concentrations with depth with chloride concentrations of 445 mg/kg at 6.5', 327 mg/kg at 8.5' and 299 mg/kg at 7.5' below surface, respectively. However, in the areas of auger holes (AH-4 and AH-5) the chloride concentrations increase or spiked to 3,120 mg/kg at 9.5' and 1,770 mg/kg at 5.5' below depth, respectively; possibly due to cross contamination.

Boreholes

On June 18, 2014, Tetra Tech personnel supervised the installation of a borehole in order to vertically delineate the chloride impact in the areas of auger holes (AH-1 and AH-2). A shallow underground line (Phillips pipeline) located in the center of the spill area. Due to access issues and safety concerns, one (1) borehole (BH-1) was installed between auger holes (AH-1 and AH-2). The area of BH-1 showed elevated chloride concentrations with a chloride high of 12,900 mg/kg at 6'-7' below surface, but declined with depth to 148 mg/kg at 29'-30' below surface. Based on the data, the impacted area was vertically defined.

Work Plan

COG proposes to remove impacted material as highlighted (green) in Table 1 and shown on Figure 4. The areas of auger holes (AH-1, AH-2, AH-3 and AH-5) will be excavated to a depth of approximately 3.0' to 4.0' and the area of auger hole (AH-4) will be excavated to a depth of approximately 6.0' below surface. Once the areas of AH-1 and AH-2 are excavated to the appropriate depth, the areas will be lined with a 40 mil liner to cap the remaining impact.

Due to proximity of the shallow line in the area, deeper excavation cannot be completed safely in the areas of AH-1 and AH-2. In addition, the high pressure underground line located in the vicinity AH-4 and AH-5 may also hinder some of the excavation for safety concerns.

The proposed excavation depths may not be reached due to wall cave ins and safety concerns for onsite personnel. In addition, impacted soil around oil and gas equipment, structures or lines may not be feasible or practicable to be removed due to safety concerns. As such, Tetra Tech will excavate the soils to the maximum extent practicable.

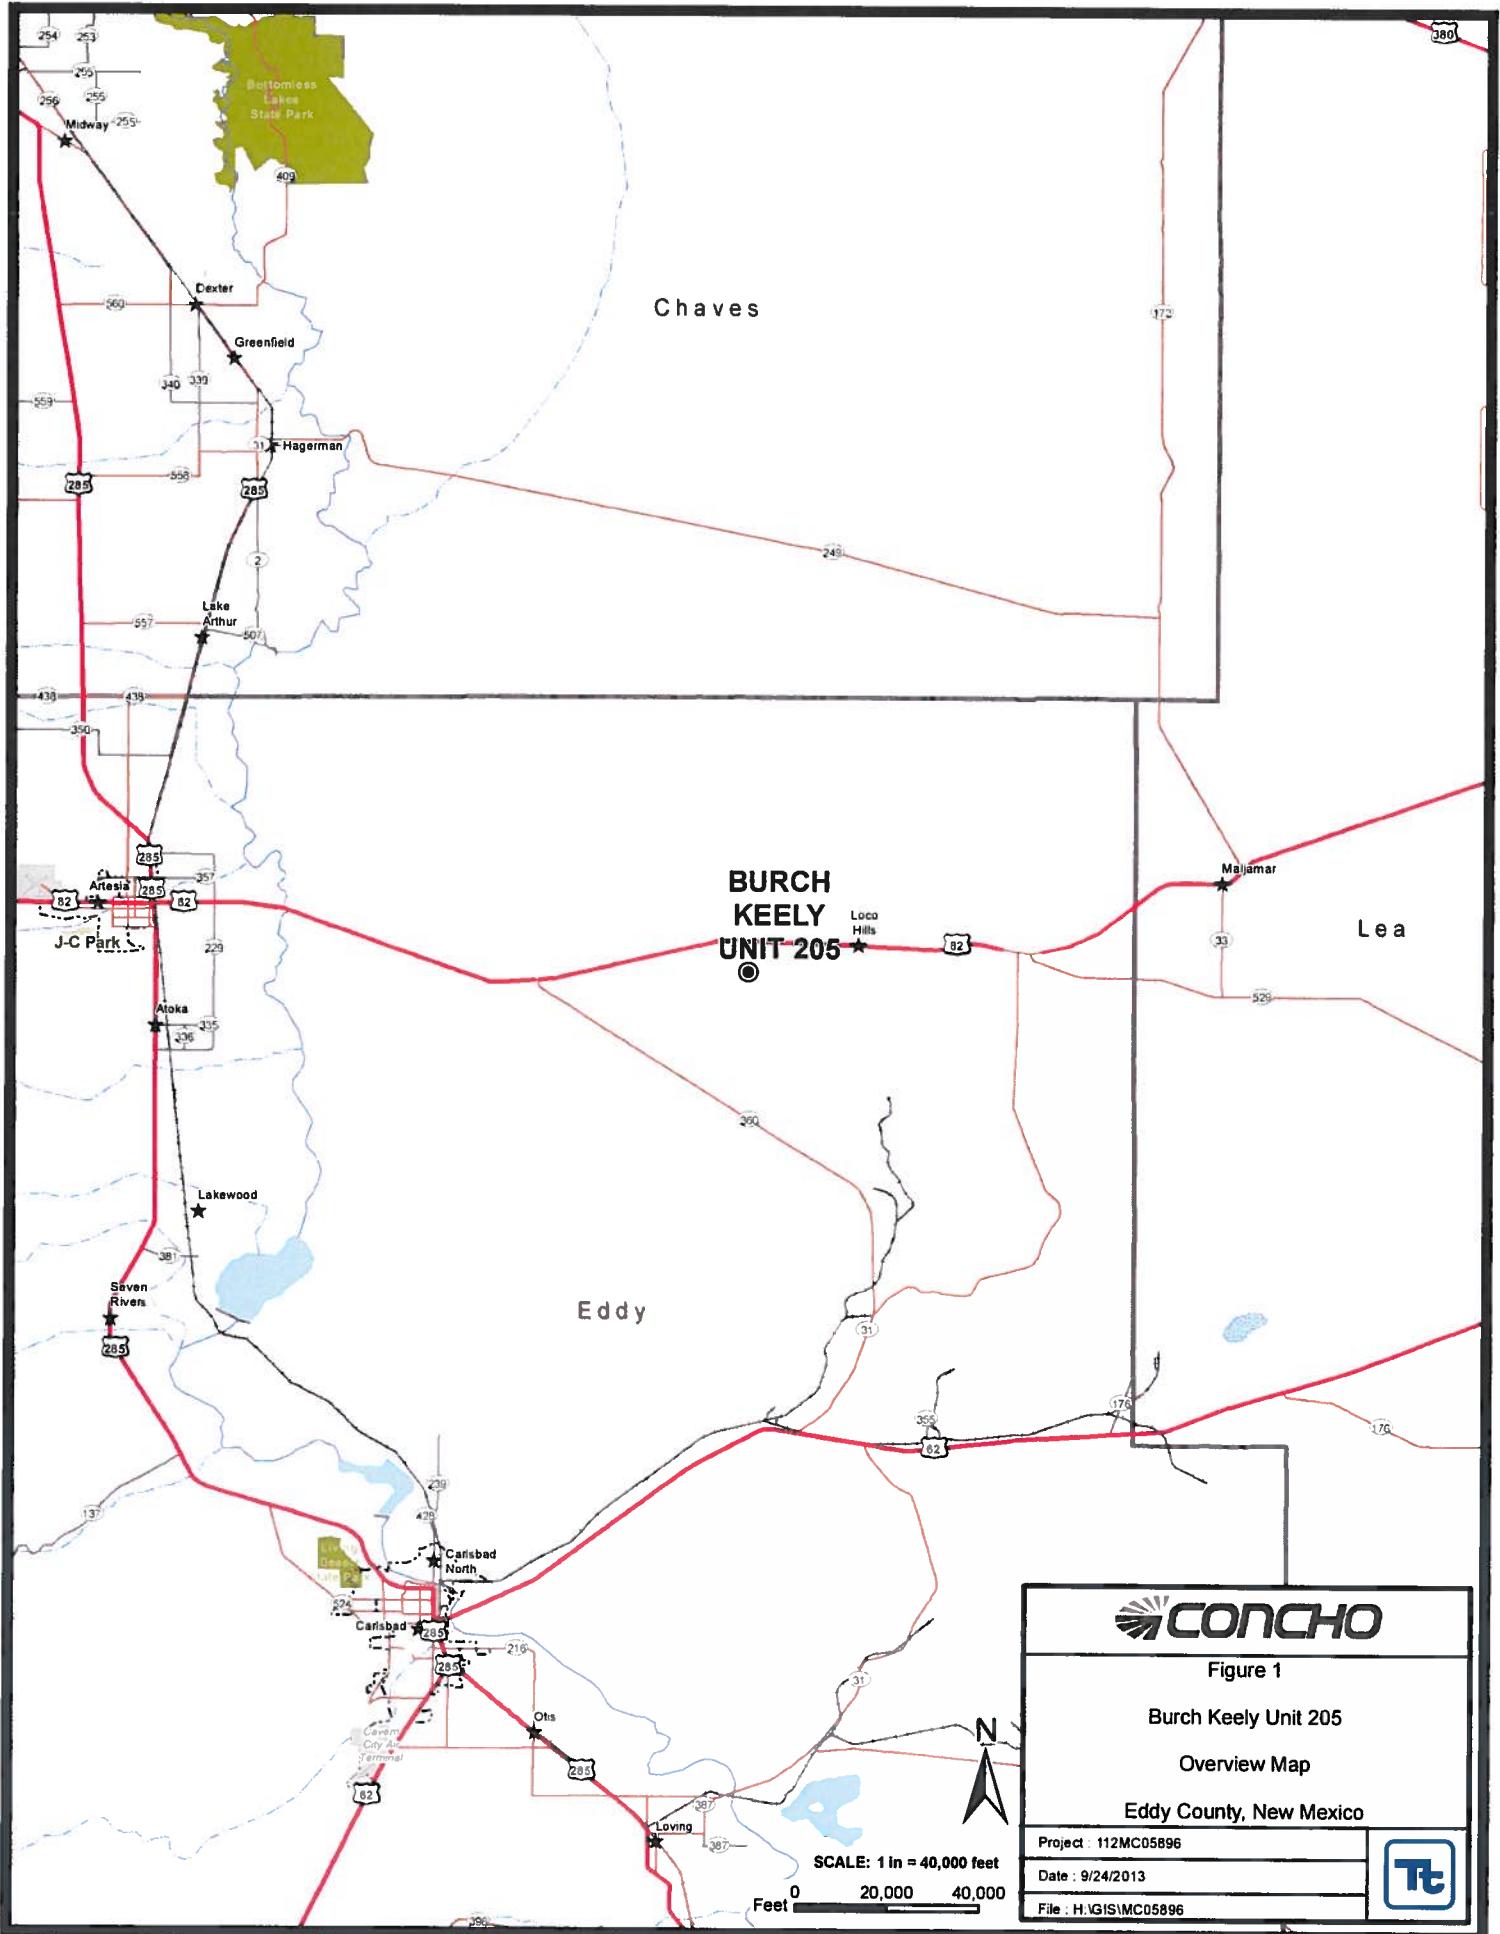

Upon completion, a final report will be submitted to the NMOCD. If you have any questions or comments concerning the assessment or the proposed remediation activities for this site, please call me at (432) 682-4559.

Respectfully submitted,
TETRA TECH

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

A fiberglass fitting came loose. Replaced the fitting a new fitting.

Describe Area Affected and Cleanup Action Taken.*

Initially 75bbls of produced water were released due to a fitting came loose on a fiberglass line. We were able to recover 50bbls with a vacuum truck. All free fluid has been recovered. The spill was located in the pasture. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a work plan to the NMOCD/BLM for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

366367	BH-1 14-15'	soil	2014-06-18	00:00	2014-06-20
366368	BH-1 19-20'	soil	2014-06-18	00:00	2014-06-20
366369	BH-1 24-25'	soil	2014-06-18	00:00	2014-06-20
366370	BH-1 29-30'	soil	2014-06-18	00:00	2014-06-20
366371	BH-1 34-35'	soil	2014-06-18	00:00	2014-06-20

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 13 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Case Narrative

Samples for project COG/BKU #205 were received by TraceAnalysis, Inc. on 2014-06-20 and assigned to work order 14062014. Samples for work order 14062014 were received intact at a temperature of 10.6 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
Chloride (Titration)	SM 4500-Cl B	95596	2014-06-20 at 13:47	113054	2014-06-23 at 14:18
Chloride (Titration)	SM 4500-Cl B	95597	2014-06-20 at 13:48	113052	2014-06-23 at 14:01

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 14062014 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Report Definitions

Name	Definition
MDL	Method Detection Limit
MQL	Minimum Quantitation Limit
SDL	Sample Detection Limit

Laboratory Certifications

C	Certifying Authority	Certification Number	Laboratory Location
-	NCTRCA	WFWB384444Y0909	TraceAnalysis
-	DBE	VN 20657	TraceAnalysis
-	HUB	1752439743100-86536	TraceAnalysis
-	WBE	237019	TraceAnalysis

Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
MI1	Split peak or shoulder peak
MI2	Instrument software did not integrate
MI3	Instrument software misidentified the peak
MI4	Instrument software integrated improperly
MI5	Baseline correction
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL
