RE: Devon \* Black Jack 1 Fed 2 Battery \* 30-015-31864 \* 2RP-3039

Ms. Pons,

The proposed remediation plan for the above listed site is denied for the following reason:  
The analytical data does not support a 6" excavation.  
It's unclear where the sample points were taken since they are not on the site map.  
Most importantly, the OCD does not consider 5,000 mg/kg to be an acceptable chloride concentration level.

Please make the appropriate changes and re-submit this work plan.

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.

If you have any questions or concerns, and for notification, please contact me.

Subject: Emailing: Devon Black Jack 1 Fed remediation plan

Good afternoon,  
I have attached the Remediation Plan for the Devon Black Jack 1 Fed 2 Battery. API 30-015-31864 We are proposing to hand dig the interior of the battery area due to the number of lines. The pad area will be excavated by dozer. There is no record of ground water in the area.  
Please advise me if you have any questions. Upon your agreement we will start clean-up activities immediately.  
Please advise me.

Thank You

Rebecca Pons
