---

Please find attached the final C-141 form and remediation report for the 1002 line leak that occurred on November 8, 2014. After evaluation of the naturally occurring chloride concentrations in the area and the concentration levels found in the excavation, Enterprise proceeded to close the excavation since the background chloride concentrations were above the NMOCD remediation action levels. All other contaminants of concern were below the NMOCD remediation action levels. If you have any questions, please contact Dina Ferguson, Environmental Supervisor, at [djferguson@eprod.com](mailto:djferguson@eprod.com)
