Amanda,

I visited the site yesterday and confirmed the line is indeed a Concho SWD line. The poly line is marked "SRO 45&65->101(SWD)." The line is still leaking from what appears to be a valve and judging from the scar on the land, it has been leaking for quite some time. If you could address this issue ASAP I'd appreciate it. I've attached pics from yesterday. As always, feel free to call me with questions.

Heather/Ian,

I was in the neighborhood so I stopped by the SRO State Unit #1. Unfortunately, I was unable to locate the area mentioned in the report. *Photo Point 4* indicates the release is to the north side of the berm, however a new pad is located to the north of the berm. It was constructed sometime in January, attached is a picture. Also, the GPS points given in *Photo Point 3* takes you to a pasture off the Hagerman Cutoff. I don't mind looking into it further but I will need GPS points and/or driving directions.

Thank you,

Amanda Trujillo

Amanda,

Ian Dolly with SLO brought this to our attention and I don't see that the OCD ever got a spill report. Can you look into this for me?

Thanks,

Heather Patterson

Subject: COG Operating Poly Line Release

Mike and Heather, it looks like a line break resulted in a PW release in Section 4, T26S-R28E. I followed the line back to the COG SRO State Unit #1H. Attached is a spill report.
