Crissy,

Please have the following "on hold" samples tested. These are all for the 0-5' interval:

B23, B24, B26, B27, B29, B31, B32, B33, B35, B36 and B37.

Thanks,

Mike Bratcher

Subject: Salt Draw No. 1

Mike,

As requested, I have attached the lab results from the last subsurface investigation at the Salt Draw No. 1 (**2RP-1791**), a map showing areas and depths of know contamination and an excel table with laboratory results and PID readings from all three investigations. Each investigation has its own tab in the spread sheet, dated appropriately.

During this investigation we installed a boring (B29) to 60 feet below ground surface and did not encounter groundwater. This puts this site into the less stringent recommended remediation levels: Benzene 10 PPM, BTEX 50 PPM and TPH 1000 PPM. Matador has safety concerned with excavation activities greater than 4 feet below ground surface. A liner can be installed at this excavation depth to prevent migration of the contamination. Most of the elevated TPH levels are in the DRO range.

Crissy Forrest
