Subject: Enterprise Mercury Fee Line Remediation

Sheldon,

As discussed with Ms. Wilson, the chloride levels obtained in today's sample/test event will be acceptable for delineation purposes, and are as follows:

S-2 – 800 mg/kg

S-3 – 1090 mg/kg

S-4 – tested at 1760 mg/kg. OCD's understanding is an attempt will be made to excavate/delineate further.

S-5 – 1040 mg/kg

S-6 – 1276 mg/kg. It is OCD's understanding that the delineation/excavation is up to the meter house making further delineation/excavation not practicable, and, that the elevated hydrocarbon levels have been removed.

Thank you,

Mike Bratcher
