RE: Final Closure Report
Bopco – PLU CVX JV PC #012H
UL-O, Section 16, Township 24 South, Range 30 East
Eddy County, New Mexico
NMOCD Reference # 2RP 3430

Ms. Patterson:

The following *Final Closure Report* serves as a condensed update on closure activities for the above referenced Site.

Background Information:

BOPCO EHS was notified of a release that occurred when the threads of a 45 elbow connection failed; the majority of the fluid was contained inside the lined firewall containment, however a small amount of oil was sprayed to the well pad. A vacuum truck was called to the location and recovered 15 barrels of oil from the lined containment and 1.5 barrels of oil from the ground surface.

Remediation Activities:

EPI personnel mobilized on the site on December 4, 2015 to collect soil samples to determine the vertical extent of contamination. A total of five (5) soil samples were collected from two (2) sample locations; SP1 and SP2. Four (4) representative samples were sent to Cardinal Labs in Hobbs, New Mexico, for testing. Laboratory analytical results indicate, with the exception of SP1 and SP2 at surface level, the release area is void of Benzene, BTEX, TPH and Chloride concentrations in excess of NMOCD Recommended Remedial Action Levels (RRALs) of 10 mg/Kg, 50 mg/Kg, 5,000 mg/Kg, and 1,000 mg/Kg, respectively (reference *Figure 3* and *Table 2*).

The release area was excavated to a depth of approximately six (6) inches bgs. Approximately 8 tons of contaminated soil were excavated and hauled to a state approved facility for disposal.

Closure Activities:

Based on laboratory analytical results and with NMOCD approval, the excavation was backfilled with approximately 8 tons of clean soil. All soil was free of rocks, clumps or deleterious material. The entire disturbed area was then contoured to blend with existing well pad area and protected against wind/water erosion.
