RE: Final Closure Report
Bopco, L.P. – PLU-CVX-JV-BS #028H
UL-A, Section 23, Township 24 South, Range 30 East
Eddy County, New Mexico
NMOCD Reference #'s 2RP 3496; 2RP 3516

Mr. Bratcher:

The following *Final Closure Report* serves as a condensed update on closure activities for the above referenced Site.

Background Information:

BOPCO pumper reported on 1-11-16 that the packing in the stuffing box failed. The majority of the fluid collected around the wellhead; a vacuum truck was called to the location and was able to recover 10 barrels of oil. A stuffing box release occurred in the same area as spill reported on 1-11-16. A vacuum truck was called to the location and recovered 15 barrels of oil and produced water. The release impacted approximately 900 sq. ft. of well pad.

Remediation Activities:

EPI personnel mobilized on the site on January 22, 2016 to collect soil samples to determine the vertical extent of contamination from the first and second releases. A total of six (6) soil samples were collected from two (2) sample locations; SP1 and SP2. Two (2) representative samples were sent to Cardinal Labs in Hobbs, New Mexico, for testing. Laboratory analytical results indicate the release area to be void of Benzene, BTEX, TPH, and Chloride concentrations in excess of NMOCD Recommended Remedial Action Levels (RRALs) of 10 mg/Kg, 50 mg/Kg, 5,000 mg/Kg, and 1,000 mg/Kg, respectively (reference *Figure 3* and *Table 2*).

The release area around the wellheads was excavated to a depth of approximately six (6) inches bgs with approximately 19.2 tons of contaminated soil excavated and hauled to a state approved facility for disposal.

Closure Activities:

Based on laboratory analytical data and NMOCD approval, the excavation was backfilled with approximately 19.2 tons of clean caliche and returned to operating condition. The entire disturbed area was then contoured to blend with existing pad and protected against wind/water erosion.
