Mike

We believe the loss of fluids is less than 25 bbls at this site – some of which drained onto the reclamation conducted about a year ago.

In mid-September, we will conduct the 2/25/14 Investigation Plan that will provide OCD with the vertical delineation of the 2013 release as well as the investigation of the recent release. At this same time, we may complete the remedy for the Southwest Royalties release at Hackberry Yates Well #105 – transmitted to OCD on 8/4/14.

Paper copies to OCD later today.
