Zack,

Based on the analytical data, it looks good to backfill. The previous release you mention, is that the overspray event from 8/19/13?

Mike,

We got a high chloride result on the Sample ID: #1- 1.5 ' MIDDLE S/W (H401815-01) so we dug out another 6 in. and re-ran the sample and got 192 on chlorides. All other samples should be low enough to back-fill. The Samples we took to the north of the separation equipment from that previous release we talked about are not shown on the diagram but the samples are included. Let me know what you think.

Thanks,

**Zack Thomas**
