---

Gentlemen,

Please review the attached images. The BLM brought this release to our attention and I understand it stems from a buried DCP line. Google Earth imagery shows impact going back as far as 2013. Please look into this as soon as possible and let us know what you find. Also, please let us know when you intend to begin to evaluate the environmental impact of this release so we may have a representative onsite.

Thanks,

Heather Patterson

Henryetta came across this today. It is on State land and can easily be seen from Google Earth. It's located in Sec 13- T19S-R28E. I've attached a screenshot from Google Earth to help you locate it.

If you have any questions or concerns, please do not hesitate to contact me.

Sincerely,

*Shelly J Tucker*

The **BLM acceptance/approval does not** relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment or if the location fails to reclaim properly. In such an event that the location does not revegetate, or future issues with contaminants are encountered, the operator will be asked to address the issues until the contaminant issues are fully mitigated and the location is successfully reclaimed. In addition, BLM approval does not relieve the operator of responsibility for compliance with any other federal, state or local laws/regulations.

Hey,

I was trying to find a well when I came across this, thinking it might be my well. But no. However, I'm concerned about this location. I can hear the water moving so I didn't get much closer. Didn't want to fall in.
