Mike,

Thanks so much for responding. Yes we did everything per your approved work plan, you are correct we did not submit a closure report yet....pending the sample results we just sent you. If the microblazed area didn't pass then the site would have went into deferment status. We will prepare a closure report and final C-141 so will be able to close this incident. Thanks again.

Respectfully,

**David J. Adkins**

David,

The data looks good, but want to make sure I am looking at the right project. I believe this is 2RP-3511. If correct, Heather had requested specific excavation depths, and for those depths to be reported in the closure document. If I have this right, we should be good to go with submittal of the closure report and Final C-141.

Thank you,

Mike Bratcher

Hello Heather and Mike,

Attached please find the lab report for the follow up confirmation samples in the battery around the separators (post-microblaze event samples) for the above referenced facility. Water table depth here is greater than 100' deep. Therefore on behalf of our client we are respectfully requesting closure for this release as all remediation activities have been completed pursuant to our NMOCD approved work plan.

Thank you.
