Subject: Re: Skelly 247 spill

I don't know because there are other operators using the road also.

The **BLM acceptance/approval does not** relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment or if the location fails to reclaim properly. In such an event that the location does not revegetate, or future issues with contaminants are encountered, the operator will be asked to address the issues until the contaminant issues are fully mitigated and the location is successfully reclaimed. In addition, BLM approval does not relieve the operator of responsibility for compliance with any other federal, state or local laws/regulations.

Mike/Shelly,

Before we write the work plan on this release I would like to know if you have a problem with us deferring the soil removal until the last well accessed by this road to be abandoned.

We sampled the spill at the header (release point) and several other locations in the road. The spill ran into the road and settled into a low area in the road before it was located. We scraped the road from 6" to 1' BGS then backfilled with clean caliche. Logistically digging up the road will put a hindrance on production. Thoughts?
