Re: Work Plan for the COG Operating LLC., Copperhead 31 Federal Com 001H Tank Battery, Unit G, Section 30, Township 26 South, Range 29 East, Eddy County, New Mexico. 2RP-4276 and 2 RP-4277

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC., (COG) to a work plan for the Copperhead 31 Federal Com #001H Tank Battery, Unit G, Section 30, Township 26 South, Range 29 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32.015107, W 104.022121. The site location is shown on Figures 1 and 2.

Background

According to the State of New Mexico C-141s Initial Reports, the first release was discovered on June 26, 2017, and released approximately ten (10) barrels of produced water due to a power loss at the Schmitt SWD, causing the flow line to pressure up and split. None of the fluids were recovered from the release. The second release overlapped the footprint of the first release and occurred the following day on June 27, 2017, due to a weld failure on the flowline that was recently repaired. The second spill released approximately fifty (50) barrels of produced water and none was recovered. Both of the releases occurred in the pasture to the southwest of the tank battery and measured approximately 35' x 425'. The initial C-141 form is included in Appendix A. The release area is shown on Figure 3.

Groundwater

No water wells were listed within Section 30 on the New Mexico Office of the State Engineer's website. However, one (1) well is listed in Section 05 and has a reported depth to groundwater of 78' below surface. One (1) water well is listed in Section 16, Township 26 South, Range 29 East in to the Geology and Groundwater Resources of Eddy County, NM (Report 3), with a reported depth to groundwater of 125' below surface. According to the Chevron Texaco Groundwater Trend map, the average depth to groundwater in the

Tel 432.682.4559 Fax 432.682.3946 www.tetrattech.com

area of Section 30 is between 50' to 75' below surface. The groundwater data is shown in Appendix B.

Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 1,000 mg/kg.

Site Remediation and Soil Sampling

On July 13, 2017, COG personnel were onsite to evaluate and assess the spill area. A total of three (3) sample trenches (T-1, T-2 and T-3) were installed to depths of 18.0', 9.0' and 8.0' below surface, respectively. Selected samples were analyzed for TPH by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The sampling results are summarized in Table 1. The trench locations are shown on Figure 3.

Referring to Table 1, all of the samples showed total TPH, benzene, and total BTEX concentrations below the laboratory reporting limits. Trenches (T-1 and T-2) showed elevated chloride concentrations in the shallow soils (from surface to 1.0' below surface) ranging from 4,140 mg/kg to 19,800 mg/kg, which both significantly declined with depth. Trench (T-1) declined to 257 mg/kg at 2.0', then increased to 650 mg/kg at 3.0', 805 mg/kg at 4.0', and 794 mg/kg at 6.0' below surface. Trench (T-2) also spiked at 2.0', 3.0' and 4.0' with chloride concentrations of 1,840 mg/kg, 1,000 mg/kg and 703 mg/kg, respectively. The chloride concentrations in the areas of trenches (T-1 and T-2) then declined with depth to 520 mg/kg at 8.0' and 112 mg/kg at 6.0', respectively, and showed bottom trench concentrations of 274 mg/kg (T-1) and 242 mg/kg (T-2).

Trench (T-3) did not show a significant chloride impact to the area with a chloride high of 1,270 mg/kg at surface which declined with depth. A chloride spike was also detected at trench (T-3) at depths of 2.0' of 867 mg/kg and 3.0' of 960 mg/kg, which then declined with depth. However, the bottom sample at 8.0' below surface showed a chloride spike of 755 mg/kg. The spike appears to be due to either lab error or the sample was cross-contaminated from the upper soils.

Work Plan

Based on the laboratory results, COG proposes to remove the impacted material as highlighted (green) in Table 1 and shown on Figure 4. The area of trench (T-1) will be excavated to a depth of 2.0' and area the trench (T-2) to a depth of 3.0'-4.0' below surface. Additionally, the area of trench (T-3) will be excavated to a depth of 1.0' below surface.

TETRA TECH

Once the areas are excavated to the appropriate depths, the areas will be backfilled with clean material to surface grade. All of the excavated material will be transported offsite for proper disposal.

The proposed excavation depths may not be reached due to wall cave ins and safety concerns for onsite personnel. In addition, impacted soil around oil and gas equipment, structures or lines may not be feasible or practicable to be removed due to safety concerns for onsite personnel. As such, COG will excavate the impacted soils to the maximum extent practicable.

Upon completion, a final report detailing the remediation activities will be submitted to the NMOCD. If you have any questions or comments concerning the assessment or the proposed remediation activities for this site, please call at (432) 682-4559.

Respectfully submitted,
TETRA TECH

Ike Tavarez, PG

Was a Watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

The release was due to a power loss resulting in the Schmitt SWD shutting in. The line pressured up and split. The section of flowline that failed was cut and the line was fused back together.

Describe Area Affected and Cleanup Action Taken.*

The release was within the pasture. A vacuum truck was dispatched to remove all freestanding fluids. Concho will have the spill area sampled to delineate any possible impact from the release and we will present a remediation work plan to the NMOCD for approval prior to any significant remediation activities.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Aaron Lieb:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 557801. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 557801 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks

Project Manager

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **SQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Recipient of the Prestigious Small Business Administration Award of Excellence in 1994.

Certified and approved by numerous States and Agencies.

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco. Its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the Client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of \$75 will be applied to each project. Xenco's liability will be limited to the cost of samples. Any samples received by Xenco but not analyzed will be invoiced at \$5 per sample. These terms will be enforced unless previously negotiated under a fully executed client contract.

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco. Its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of \$75 will be applied to each project. Xenco's liability will be limited to the cost of samples. Any samples received by Xenco but not analyzed will be invoiced at \$5 per sample. These terms will be enforced unless previously negotiated under a fully executed client contract.
