Subject: [EXT] EOG PW flow line release 11-3-18

Good afternoon, EOG has had a release from a produced water flow line north of Loving, NM yesterday afternoon. We have isolated the line. It's at the corner of 728 and Hwy 285. We estimate that approx 70+ bbls were released. We are still gathering details on how much was recovered. I will be submitting a C141 with further details. Please let me know if there are further questions.
