Attachments: Deferral Approval - XTO- Muy Wayno 7 State 1H (2RP-5023) 4.8.19.pdf

Adrian and Kyle,

Thank you for the pictures taken during the liner inspection and the certification on form C-141 that the liner was visually inspected. LT Environmental's deferral request for the above release, requests to backfill the existing excavation and complete remediation during any future major well pad construction/alteration or final plugging and abandonment, whichever occurs first. The area requested for deferral is identified on the site map as "SW01". The areas have been delineated and documented in the report. At this time, OCD approves this request. The Final Report C-141 will be accepted for record and marked accordingly. The release will remain open in OCD database files and reflect an open environmental issue. This is a State site and will require like approval from SLO.

Thank you,

Robert J Hamlet

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Importance: High

Morning Robert,

I have attached a revised C-141, notification of liner inspection from XTO to NMOCD/BLM, and pictures associated with our inspection conducted on October 18, 2018 immediately after the release. I have added language to the attached C141 to describe the liner inspection. Please let me know if this answers the questions you have. Thanks. --Kyle

Subject: Question on Liner Integrity - Deferral Request - XTO - Muy Wayno 7 State 1H (2RP-5023) 10-3-2018

Adrian,

We had a State Land Office individual in that area in late January doing some ROW assignments and she noticed some issues (holes) in the liner down by the short tank and took some pictures. Understandably, this is on the opposite end of the tank battery where this particular spill took place. Be advised that under the current spill rule (19.15.29 NMAC) effective August 14, 2018, certification on form C-141 that the responsible party has visually inspected the liner where the release occurred and the liner remains intact and had the ability to contain the leak in question. Could you please send any pictures taken during the liner inspection and insure certification on form C-141 that the liner was visually inspected.

Thank you,
