Chris,

At our meeting about this site, we discussed using a Hydrovac to remove the remaining loose rock and sediment down to rock refusal and then back-filling with clean material. Approximately 30 bbls of waste fluids and 20 yards of contaminated solids were recovered and disposed of.

We have received your closure report and final C-141 for **2RP-4989 Malco B Fed Battery**, thank you. This closure is approved. This is a Federal site and will require like approval from BLM.

Please let me know if you have any further questions.

Regards,

Robert J Hamlet

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

As previously discussed and agreed upon. The excavated pasture area in question was hydrovaced on 4-18-19. Photographic documentation was captured and attached showing the completed process. We will now backfill this area and respectfully ask for closure in regards to this site.

Thank You,

Chris Jones
