Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- ☒ A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- ☒ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- ☒ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- ☒ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

**RE: Impacted Soil Removal, Disposal, and Site Restoration
 Foster Tank Battery Facility
 Eddy County, New Mexico
 Case Number 2RP-4503**

Mr. Bratcher:

WSP USA (WSP), is requesting closure of case number 2RP-4503, Foster Tank Battery – Eddy County (Figure 1), on behalf of Percussion Petroleum, LLC. (Percussion). Surface soils south of the pad at the Site was impacted with produced water from a flow line leak that occurred the last week of November 2017. Preliminary soil sample results indicated that an area of approximately 150 feet by 50 feet of surface soil to a depth of approximately 1 foot below grade was impacted with benzene, toluene, ethylbenzene, and xylenes (BTEX) and total petroleum hydrocarbons (TPH), above New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases (Guidelines) (Figure 2 and Table 1). The soils were also impacted with chlorides above the non-published NMOCD guidelines.

Per the scope of work., approved by NMOCD on March 27, 2018, WSP oversaw Dudley Sales and Service (Dudley) excavating approximately 300 cubic yards of petroleum hydrocarbon and chloride impacted soil from the impacted area, approximately 1.5 feet in depth. All soil was transported to R360 Environmental Solutions (R360) landfill in Lea County. Excavation was completed on June 21, 2018 and WSP collected confirmation samples per the approved sampling plan. Ten locations were selected and sampled at a depth of 2 feet, 3 feet, and 4 feet below the original ground surface (Figure 3). Samples were collected by hand auger and gloved hands and placed in clean sample containers supplied by the laboratory. Samples were placed on ice in a cooler provided by the laboratory and submitted to ALS Laboratory in Houston, Texas under strict chain of custody. Samples were transported via Fedex. The samples were analyzed for Total Petroleum Hydrocarbon (TPH) Gasoline Range Organics (GRO), diesel range organics (DRO) and oil range organics (ORO); benzene, toluene, ethylbenzene, and total xylenes (BTEX), and chlorides. Table 1 lists the post remediation sample results. All samples were below the NMOCD limits with the exception of S-2 at 3 feet in depth, which exhibited chlorides over the NMOCD limits. On July 9, 2018 WSP instructed Dudley to excavated an additional two feet in depth in the vicinity of sample point S-2. WSP collected confirmation samples following the additional excavation and submitted the samples to ALS Laboratory under the same protocol. Results of the additional samples were found to be below the NMOCD limits for chlorides. Following the NMOCD's approval for closure, the excavation will be backfilled with clean soil, compacted and seeded.
