DeAnn,

All spill reports showing the release was in the pasture, should have some supporting documents, to include aerials and any additional information that would help the BLM make decisions as to how to proceed, to include authorizations to commence remediation, sampling, etc. The event was discovered 5/17/19, we're receiving this report 6/4/19, ample time to provide the additional info. If any questions, please get back to me. Thanks

Mr. Bratcher/Mr. Amos,

Please find the attached C-141 for your consideration. Also, attached is the calculation sheet to determine the estimated release volume. The liquid lost estimate is based on the spill dimensions, estimated depth of fluid (wet soil depth) and type of formation. The spreadsheet will calculate the volume lost in the ground and does not include the recovered amount in the calculation. The calculated volume in the ground and the volume recovered were added together and reported on the C-141. If you have any questions or concerns please do not hesitate to contact me.

Thank you,

DeAnn Grant
