This plan is submitted with the Application for Permit to Drill the above described well. The purpose of the plan is to describe the location of the proposed well, the proposed construction activities and operations plan, to be followed in rehabilitating the surface environmental effects associated with the operations.

1. EXISTING ROADS:

- A. Exhibit "A" is a portion of a BLM Comanche Spring Topo map showing the location of the proposed well as staked. The well site location is approximately 17 road miles northeast of Roswell, NM. Traveling east of Roswell on U.S. Highway 380 there will be 10 miles of paved road and 9.4 miles of gravel county/ ranch roads.
- B. Directions: Travel east of Roswell, NM on U. S. Highway #380 for 10 miles to the Bottomless Lakes turnoff. Turn north on gravel county road for approximately 5 miles to crossing a cattle guard that is approximately 1500 feet east of the ranch house and windmill. Continue northwest for .2 mile to a road intersection; turn right (northeast) for approximately 1.9 miles to Dallas Ranch corrals; continue north for 1 mile to a road turning west; turn west for 1.2 mile the start of the proposed access road on the left. The proposed access road will follow an Agave pipeline south for approximately 1,650 feet to the northwest corner of the proposed well site.

2. PLANNED ACCESS ROAD:

- A. Length and Width: The proposed access road will be approximately 1650 feet in length, 12 feet wide (24' Max.). The proposed and existing roads are color coded on Exhibit "A".
- B. Construction: The new access road will be constructed by grading and topping with compacted caliche. The surface will be properly drained.
- C. Turnouts: There may be one turnout increasing the width to 20 feet for passing at the mid-point. .

5. LOCATION AND TYPE OF WATER SUPPLY:

- A. It is planned to drill the proposed well with fresh water that will be obtained from private or commercial sources and will be transported over the existing and proposed access roads.

6. SOURCE OF CONSTRUCTION MATERIALS:

- A. Caliche for surfacing the proposed access road and well site pad will be obtained from a pit on the location if available or from a private pit in the NE $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 30-T9S-R26E. No surface materials will be disturbed except those necessary for actual grading and leveling of the drill site and access roads.

- D. The surface will be topped with compacted caliche and the reserve pits will be plastic lined.

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations, all equipment and other material not required for operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the well site in an aesthetically pleasing a condition as possible.
- B. Any unguarded pits containing fluids will be fenced until they are filled.
- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management will be complied with and will be accomplished as expeditiously as possible. All pits will be filled and leveled as soon as they are dry enough to be worked.

11. OTHER INFORMATION:
