13 Describe Proposed or Completed Operation. Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

Yates Petroleum Corporation plans to plugback and recomplete this well as follows: NU BOP. POOH with existing production equipment. Run GR/JB to 7750'. Set a CIBP at 7729' with 35' cement on top. Pressure test casing to 3500 psi. Perforate Yeso 2274'-2286' (13), 2290'-2324' (35), 2330'-2348' (19), 2352'-2358' (7), 2376'-2382' (7), 2416'-2422' (7), 2424'-2430' (7), 2434'-2440' (7) and 2444'-2448' (5) for a total of 107 holes. Stimulate as needed. Flow well back and allow to clean up. TIH with tubing to check for fill and to ensure that the perforations are not covered. Swab well until it cleans up, then TIH with pumping equipment and turn well to production.

* BLM would prefer a plugback w/ plugs covering the Wolfcamp and Bone Springs prior to recompletion. If wellbore failure would occur in the future, the lower wellbore will have been taken care of. Notify BLM prior to bottom plug.
