13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

C-108 as previously filed on October 26, 2005 was dropped to opposition for SWD and will either be refiled as pressure maintenance well or additional perms will be added based upon testing of the Elizando Fed 2 as proposed in Sundry dated August 8, 2011.

Conditions**

Reminder to operator: Well is still in non-compliance as it is shut-in without approval.

Sundry dated 08/09/2011, received at BLM CFO 08/15/2011.

- 1. Operator to provide timetable for this well by September 1, 2011. Since it is and has been shut-in without approval for an extended time period, the BLM will not give an approval that is based on the testing of the Elizando Fed 2 (30-015-31978).**
- 2. This well is not a viable candidate for pressure maintenance per the NMOCD definition in Rule 19-15-26-7.B. which states: "Pressure maintenance project" means a project in which an operator injects fluids into the producing horizon in an effort to build up or maintain the reservoir pressure in an area that has not reached the advanced or stripper state of depletion.**
- 3. This area based on the long term lack of production or limited production from the two Elizando wells is apparently in an advanced state of depletion. If operator is to pursue a pressure maintenance project, they shall submit a reservoir engineering study to support the project.**
