13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

BOPCO, L.P. requests a variance to utilize a 10", 230 psi WP hose for the flowline line under the rig substructure in replace of the steel flowline from the rotating head to the flowline manifold. Utilizing this hose will quicken nipple up times during rig skidding operations and reduce safety issues associated with welding on the flowline during BOP NU. The hose itself is rated to 230 psi WP and has 150# flanges on each end rated to 230 psi WP. This hose matches the rated working pressure of the flowline system on the rig.

The pressure test certification from the hose manufacturer is attached along with a picture of the hose. This is the only pressure test documentation available for the hose.
