Operator: DEVON ENERGY PRODUCTION COMPANY, LP , 6137

Well: INDIAN DRAW 13 FEE #002

30-015-34076

User Name	Comment	Comment Date
ADAMSN	Depth to ground water is 50 feet or more, but less than 100 feet. Well is not in a wellhead protection area. Well is 1000 feet or more to surface water. No H2S is expected to be encountered. A nearby gas analysis will be mailed.	3/29/2005
BARRANT	Will require h2s plan providing area meets the requirements of NMOCD Rule 118.	4/6/2005

Hydrogen Sulfide (H₂S) Contingency Plan

For

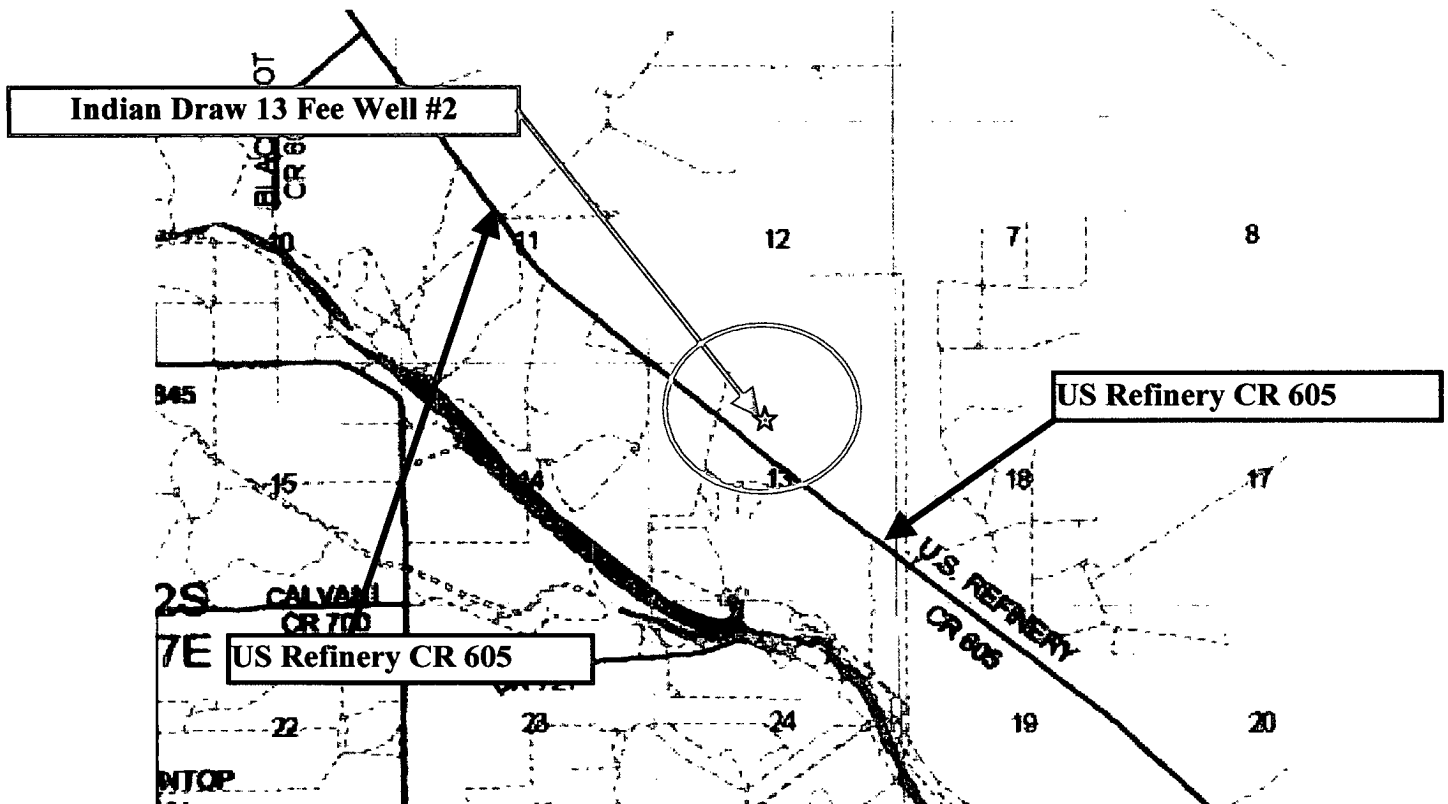

Indian Draw "13" Fee Well #2

**700' FNL & 1680' FWL,
Sec-13, T-22S R-27E**

Eddy County NM

RECEIVED
APR 13 2005
OOD-ARTESIA

This is an open drilling site. H₂S monitoring equipment and emergency response equipment will be used within 500' of zones known to contain H₂S, including warning signs, wind indicators and H₂S monitor.

Assumed 100 ppm ROE = 3000' (Radius of Exposure)
100 ppm H₂S concentration shall trigger activation of this plan.

Crews shall escape upwind of escaping gas in the event of an emergency release of gas. Escape can be facilitated South on lease road to US Refinery Road. Crews should then block both directions of US Refinery (CR 605) so as not to allow anyone traversing into a hazardous area. There is one house at the edge of the ROE. Care must be taken to ensure the safety of the residents in the event of a release of hazardous gas release.

Emergency Procedures

In the case of a release of gas containing H₂S, the first responder(s) must isolate the area and prevent entry by other persons into the 100 ppm ROE. Additionally the first responder(s) must evacuate any public places encompassed by the 100 ppm ROE. First responder(s) must take care not to injure themselves during this operation. Company and/or local officials must be contacted to aid in this operation. Evacuation of the public should be beyond the 100 ppm ROE.

All responders must have training in the detection of H₂S, measures for protection against the gas, equipment used for protection and emergency response. Additionally, responders must be equipped with H₂S monitors and air packs in order to control the release. Use the “buddy system” to ensure no injuries during the response.

Ignition of Gas Source

Should control of the well be considered lost and ignition considered, take care to protect against exposure to Sulfur Dioxide (SO₂). Intentional ignition must be coordinated with the NMOCD and local officials. Additionally the NM State Police may become involved. NM State Police shall be the Incident Command on scene of any major release. Take care to protect downwind whenever there is an ignition of the gas

Characteristics of H₂S and SO₂

Common Name	Chemical Formula	Specific Gravity	Threshold Limit	Hazardous Limit	Lethal Concentration
Hydrogen Sulfide	H ₂ S	1.189 Air = 1	10 ppm	100 ppm/hr	600 ppm
Sulfur Dioxide	SO ₂	2.21 Air = 1	2 ppm	N/A	1000 ppm

Contacting Authorities

Devon Energy Corp. personnel must liaison with local and state agencies to ensure a proper response to a major release. Additionally, the OCD must be notified of the release as soon as possible but no later than 4 hours. Agencies will ask for information such as type and volume of release, wind direction, location of release, etc. Be prepared with all information available. The following call list of essential and potential responders has been prepared for use during a release. Devon Energy Corp. Company response must be in coordination with the State of New Mexico’s ‘Hazardous Materials Emergency Response Plan’ (HMER)
