Our records show that a CIBP was set at 1530' and capped w/10' of cement. The San Andres was perf'd from 1376-1426' w/20 shots and treated. A copy of a subsequent report dated 2-16-77 is attached. This is the last information we have on this well.

This NOI does not refer to the recompletion. If additional work has been done to drill out the CIBP, squeeze perfs and recompleted to the Yeso, please provide appropriate documentation for our files.

Thank you.
