NMOCD ARTESIA

Describe Cause of Problem and Remedial Action Taken.*

A 3" fitting failed on the main flow line header. The wells were shut in and the fitting was replaced.

Describe Area Affected and Cleanup Action Taken.*

The spill impacted approximately 750 sq. ft. of tank battery pad area and approximately 360 sq. ft. of pasture area underneath approximately 20 flow lines. All of the fluid soaked into the ground. The impacted soil around the flow lines was in the process of being removed with shovels. The area will be cleaned up in accordance with the NMOCD and BLM remediation guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
