Describe Cause of Problem and Remedial Action Taken.*

Threads on a 1/2-inch needle valve washed out on discharge side of the H-Pump. Replaced 1/2-inch needle valve on the H-Pump.

Describe Area Affected and Cleanup Action Taken.*

Initially 40bbls of produced water were released. We were able to recover 40bbls of produced water with a vacuum truck. The spill was contained inside the lined facility. All free fluid has been recovered. Any contaminated gravel has been removed, the liner has been steam cleaned and we has replaced with fresh gravel as necessary. This location has been returned to its prior condition.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
