Following the P&A of the well, soil samples were collected from the well pad by use of a backhoe and environmental drill rig in June and July 2014. The soil bores were plugged with bentonite and the samples were sent to a commercial laboratory for analyses. Soils from the surface of the well pad to depths of 6 inches to 2 feet that were impacted by chloride and hydrocarbons were removed to a NMOCD approved disposal facility. A 20 mil polyethylene liner was installed in the excavation floor and the excavation was backfilled with clean imported topsoil. The site was contoured for water erosion prevention along the slope and will be re-seeded.
