NATURE OF RELEASE

Type of Release	Produced fresh water and iron sulfide	Volume of Release	45	Volume Recovered	0
Source of Release	Hole in filter line	Date and Hour of Occurrence	1200PM 02-05-06	Date and Hour of Discovery	1200PM 02-05-06
Was Immediate Notice Given?	X Yes <input type="checkbox"/> No Not Required	If YES, To Whom?	Mike Bratcher, District 2 OCD		
By Whom?	Dan Dolan	Date and Hour	02-06-06, 1350 hrs		
Was a Watercourse Reached?	<input type="checkbox"/> Yes X No	If YES, Volume impacting the Watercourse.			

If a Watercourse was impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

Hole in filter line cause water to leak on ground, this is Dagger Draw water.(Fresh)

Describe Area Affected and Cleanup Action Taken.*

Water leaked around Pump building, and left a small stain of iron sulfide on the area, will be cleaned.

Ranking for this area is as follows; Depth to ground water-0, Wellhead protection area-0, Distance to surface water-0

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Operator,

The New Mexico Oil Conservation Division, District 2 Office (OCD) is in receipt of an Initial Report C-141 reporting a release of produced fluids at the above referenced site. The release occurred 2/5/2006. The release volume reported was 45 barrels with no fluids recovered. The produced fluids released are described as "fresh water". Please provide the OCD with documentation of analysis of this water to classify it as fresh water.

The release was reported to the OCD on 2/6/2006 and a physical inspection of the site was made on 2/7/2006. The release appeared to originate from a line that runs under the pump building on the West end. Fluids traveled south around pump building partially flowing around East end of building and around tanks situated on that end of building. Some volume of fluids exited the location through two breaches in the location berm on the South side. The flow path then extended West and East out into surrounding pasture land.

At this time, the OCD is requesting the following:

- Documentation of water analysis.
- Vertical and Horizontal delineation of contaminants released if contaminants are present in fluids released.
- Work Plan for remediation of contamination present at this site.
- Confirmation samples be obtained for analysis in the release flow path.

Please provide the water analysis documentation upon receipt of this letter. If delineation of contamination and a work plan for remediation is required, delineation is to be performed no later than 3/20/2006 and work plan provided no later than 3/31/2006.

The C-141 submitted is, at this time, accepted for record pending water analysis report.

If I can be of assistance in this matter or if an extension of deadlines is needed, please contact me.

Sincerely,

Mike Bratcher
