## Additional data for EC transaction #461967 that would not fit on the form

## 32. Additional remarks, continued

3. A blind flange at the same pressure rating as the wellhead will be installed to seal the

3. A blind trange at the same pressure rating as the wellnead will be installed to seal the wellbore. Pressure will be monitored with needle valves installed on the wing valve.
4. Spudder rig operations are expected to take 2-3 days per well on the pad.
5. The BLM will be contacted and notified 24 hours prior to commencing spudder rig operations.
6. Drilling operations will begin with a larger rig and a BOP stack equal to or greater than the pressure rating that was permitted will be nippled up and tested on the wellhead before drilling operations resume on each well.
a. The larger rig will mean back eact the leasting with P0 days from the point at which the wells

a. The larger rig will move back onto the location with 90 days from the point at which the wells are secured and spudder rig is moved off location. b. The BLM will be contacted / notified 24 hours before the larger rig moves back on the pre-set

locations

7. Operator will have supervision on the rig to ensure compliance with all BLM and NMOCD

regulations and to oversee operations. 8. Once the rig is removed, Operator will secure the wellhead area by placing a 1 inch steel plate over the cellar and wellhead.
