13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

Murchison Oil and Gas, LLC respectfully requests permission to change setting depth of the intermediate 9 5/8 inch P110HC, 43.5 lb casing to 9500 feet. Safety factor for burst is 14.71, collapse is 1.21, and tension is 9.84.

We also respectfully request permission to change the percent excess of cement on the intermediate first stage 3000 to 9500 feet from 80% excess to 30% excess.

Cementing operations were recently finished on Rock Ridge Federal WCXY 2H (30-015-45729) intermediate section which is at 9000 feet and we determined that there is only 17.956% washout on the first stage of intermediate cement.

Percent washout was calculated by using amount of cement pumped minus cement to surface divided by annulus capacity.

The new cement program for first stage intermediate would be as follows:

Lead 870 sxs, yield 2.83, density 11.5
