This well was originally operated by James P. Dunigan and plugged on 07/19/1960.

Re-enter to re-plug as per NMOCD Order No. R-12658. Re-enter the well and drill out any plugs down through the permitted injection interval, run a bond log to determine cement top behind the existing production casing. We cannot, at this point, correctly determine how we are going to plug until we re-enter the well, clean out, and run the bond log. Once we determine our downhole situation we will submit (while we are on the well) another Form C-103 with the proper plugging procedure.

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that any pit or below-grade tank has been/will be constructed or closed according to NMOCD guidelines ☐ , a general permit ☐ or an (attached) alternative OCD-approved plan ☐
