Attn: Gerry Guye

On Sunday May 25, 2008, I was on vacation when I received call from production technician of leak on OXY Old Ranch Knoll 8 Fed #7 location. Technician did not know how many barrels and I told him to report to Senior Pumper. Subsequently NMOCD was notified of reportable leak. Further investigation showed leak had just started and was less than 5 barrels total fluid. Three (3) bbls were picked up and Knaf was spread on remaining liquids and soaked up. Contaminated soil was removed and replaced. All fluid remained inside berm. Form C141 will not be filled out on this incident. If you have any questions please call.

OXY Old Ranch Knoll 8 Fed #7, S8,T22S,R24E. Hwy 285 towards Carlsbad, turn south on Hwy 137 and go to MM 42 and turn left. Proceed for 2.1 miles to location next to OXY dog house.
