Pit, Closed-Loop System, Below-Grade Tank, or
Proposed Alternative Method Permit or Closure Plan Application

- Type of action: ☐ Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method
☐ Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method
☐ Modification to an existing permit
☒ Closure plan only submitted for an existing permitted or non-permitted pit, closed-loop system, below-grade tank, or proposed alternative method

Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request

Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

Re: Lakewood 28 No. 1 Final Closed Loop Notification of Intent to Close
API No.: 30-015-36400 (U/L L S28 T19S R26E)

Dear Mr. Bratcher:

Rubicon Oil & Gas herewith submits the following information in compliance with the current Form C-144 for the closure of the Lakewood 28 No. 1 drilling pit and closed loop system in which above ground steel tanks were utilized, which was originally permitted under Pit Rule 50 on 21 July 2008. Consequently, all liquids and drill fines procured below 1,604 feet were obtained through utilization of a close loop system and hauled directly to CRI (Permit No. R-9166). All other liquids and materials (drilling fines) above this depth were obtained using only fresh water and were placed in the drilling pit on location. These cuttings shall also be hauled to CRI.

All closure protocols and procedures shall be based upon the requirements of NMAC 19.15.17.13. Sampling shall proceed as the materials are removed to disposal to determine the necessary excavation depth until compliant with NMAC Sub. F 19.15.17.13 and reported to the NMOCD for acceptable closure. However, all drilling pit analyticals should be commensurate with soil chloride backgrounds since only fresh water was utilized in the zones above 1,604 feet and none of the material below this depth was placed into the drilling pit. Rather it entered the closed loop system and was hauled to CRI for immediate disposal.

Analyticals shall be legally obtained and documented by Trace Analytical Labs prior to closure and submitted with the final report. There is sufficient native soil on location, which was removed from the now excavated pit area for replacement and return to original topographic contours. At a minimum, no less than three (3') feet of clean fill material and one (1') foot of topsoil shall be utilized as backfill. However due to the normal depth of this pit, it is estimated that all of the backfill material shall be needed to achieve regulatory Performa. Re-vegetation shall be based upon the applicable requirements of NMAC Sub. I 19.15.17.13 which shall be dependent upon the site reclamation pursuant to applicable requirements of NMAC Sub. G 19.15.17.13.

Rubicon desires to proceed immediately with this closure while the weather is still viable for said operations. Therefore, Rubicon humbly requests approval to move ahead on this project as soon as possible.

Please advise should you have questions by phoning (432-684-8006).

Sincerely,

Hal Lee
Operations Manager/Agent
