LETTER OF VIOLATION and SHUT-IN DIRECTIVE Failed Mechanical Integrity Test

Dear Operator:

The following test(s) were performed on the listed dates on the following well(s) shown below in the test detail section.

The test(s) indicates that the well or wells failed to meet mechanical integrity standards of the New Mexico Oil Conservation Division. To comply with guidelines established by the U.S. Environmental Protection Agency, the well(s) must be shut-in immediately until it is successfully repaired. The test detail section which follows indicates preliminary findings and/or probable causes of the failure. This determination is based on a test of your well or facility by an inspector employed by the Oil Conservation Division. Additional testing during the repair operation may be necessary to properly identify the nature of the well failure.

Linn Operating, Inc. (Linn) has 19 injection wells that failed their Mechanical Integrity Tests performed last year in 2010. As of today, twelve of these wells have not been repaired even though there was a deadline of 7/11 to 7/25/2010 to repair these wells. LOV 02-09-148 was issued on April 22, 2010 informing Linn that these wells had to be shut-in and could not be used until they were repaired and tested.

During inspections performed on the wells mentioned above, Inspector Richard Inge observed that Linn was actively injecting into the following wells:

HE WEST A 6 api#30015050650000 HE WEST B 16 api#30015050560000 api#30015050920000 JL KEEL A 4 J L KEEL B 34 api#30015254470000 api#30015259190000 J L KEEL B 38 J L KEEL B 77 api#30015282790000 api#30015052400000 **TURNER A 15** TURNER A 35 api#30015200970000 The following wells were shut-in, but have not yet been repaired: HE WEST B 26 api#30015050600000 J L KEEL B 22 api#30015050820000 J L KEEL B 32 api#30015246940000 JL KEEL B 37 api#30015259340000

Due to Linn's disregard for the rules and directives of the OCD, Linn must immediately cease injection into the wells listed in this LOV. Linn must also disconnect each of these wells from their injection line. Inspector Inge will conduct an inspection within the next few weeks. If he finds these wells connected to an injection line, he will assume that Linn is still injecting into these wells and will pursue further action which may include a hearing to determine if Linn Energy should lose the injection authority of their wells.

MECHANICAL INTEGRITY TEST DETAIL SECTION

In the event that a satisfactory response is not received to this letter of direction by the "Repair Due:" date shown above, or if the well(s) are not immediately shut-in, further enforcement will occur. Such enforcement may include this office applying to the Division for an order summoning you to a hearing before a Division Examiner in Santa Fe to show cause why you should not be ordered to permanently plug and abandon this well. Such a hearing may result in imposition of CIVIL PENALTIES for your violation of OCD rules.
