DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to a total depth of 2052 feet.  
We treated the frontier zone in open hole 2025-52 with 25,000 gal. oil and 50,000 lbs. sand.  
Production has now dropped to approximately 10 B.O.P.D. and we propose to run a log and perforate the heter zone at approximately 1800 feet with 20,000 gal. of oil and 50,000 lbs. of sand, using a packer below the perforations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
